JONATHAN MOODY

The Oxford Handbook of Deaf Studies, Language, and Education, Volume 1 Oxford University Press

The nexus of psychoanalytic, literary, and philosophical approaches in this book focuses on an intertextual reading of Woolf and Kristeva in order to address the enigma of the persistent suppression of women's contributions to culture. In spite of the efforts of feminist theory and history to turn the tide, this process is with us still. "I am the first of a new genus" (Mary Wollstonecraft). "When I looked around, I saw and heard of none like me" (Mary Shelley). "I look everywhere for grandmothers and find none" (Elizabeth Barrett Browning). "Why isn't there a tradition of the mothers?" (Virginia Woolf). "Women have 'no past, no history'" (Simone de Beauvoir). "I look for myself throughout the centuries and I don't see myself anywhere" (Helene Cixous). As Woolf noted, "strange spaces of silence" separate the solitary female utterances throughout history. The brutal vicissitudes of the contemporary reception of feminist thinkers, crushed between traditional academia and an anti-intellectualism that describes itself as activism, are symptoms of the fact that the conditions, which produced the "strange spaces of silence" and made the repetitive generic loneliness from Wollstonecraft to Cixous possible, are still operative. They have found their way into the present age as "reactionary conformity that manages to discredit any notion of feminine specificity or freedom that is not based on seduction—which means not based on reproduction and consumption" (Kristeva). The intertextual approach to Kristeva and Woolf brings to light "matricide" as the silent engine behind the stammering of female temporality. "Matricide" is offered as an entrance to the conceptualization of the cultural ramifications of a language that wavers between hypnotic passion and murder. As Joan Scott has demonstrated, the oscillations between phantasies of uniqueness and phantasies of fusion are characteristic of women's movements. Matricide in Language claims that these fantasies are subtended by imaginary matricide and that they can explain the extreme discursive practices that are characteristic of the debate in and around feminism.

La Langue des Signes Française (LSF) Springer Science & Business Media

This volume focuses on the relationship between time, narrative and the fixed image. As such, it highlights renewed interest in the temporality of the fixed image, probably one of the most important trends in the formal and semiotic analysis of visual media in the past decade. The various essays discuss paintings, the illustrated covers of books, comics or graphic novels, photo-stories, postcards, television and video art, as well as aesthetic practices that defy categorization such as Chris Marker's masterpiece *La Jetée*. The range of works and practices examined is reflected in the different theoretical approaches and methods used, with an emphasis on semiology and narratology, and, to a lesser extent, aesthetics and psychoanalysis. The interest of this book, however, does not stem exclusively from the range and scope of the artefacts examined, or the methodological issues

that are addressed; its fundamental importance rests in the contributors' readiness to question the differentiation between fixed and moving images which all too often provides a convenient, if not altogether convincing, starting point for image analysis. . The originality and value of the contribution that Time, Narrative and the Fixed Image/ Temps, Narration et image fixe makes to the body of theoretical writing on visual media lies in this challenging and comprehensive approach.

Les Langues des Signes (LS) sont des langues naturelles visuo-gestuelles pratiquées au sein des communautés de sourds. L'ingénierie des LS traite des problématiques issues de diverses disciplines comme la linguistique, les études de corpus, la modélisation et l'implémentation informatique (reconnaissance de formes, informatique graphique, etc.). Cet ouvrage interdisciplinaire présente une vue d'ensemble de la recherche sur la LS française (LSF) en la replaçant dans le contexte international. Linguistes et informaticiens proposent, par le prisme de leur double compétence, un état des lieux de la recherche sur la LSF accessible aux étudiants et chercheurs intéressés par les LS, par la linguistique, par le traitement automatique des langues et la conception d'applications consacrées aux LS.

In Plato's *Cratylus*, which dates to 360 B.C., Socrates alludes to the use of signs by deaf people. In his *Natural History*, completed in 79 A.D., Pliny the Elder alludes to Quintus Pedius, the deaf son of a Roman consul, who had to seek permission from Caesar Augustus to pursue his training as an artist. During the Renaissance, scores of deaf people achieved fame throughout Europe, and by the middle of the 17th century the talents and communication systems of deaf people were being studied by a variety of noted scientists and philosophers. However, the role of deaf people in society has always been hotly debated: could they be educated? Should they be educated? If so, how? How does Deaf culture exist within larger communities? What do advances in the technology and the genetics of hearing loss portend for Deaf communities? In this landmark volume, a wide range of international experts present a comprehensive and accessible overview of the diverse field of deaf studies,

language, and education. Pairing practical information with detailed analyses of what works, why, and for whom, and banishing the paternalism once intrinsic to the field, the handbook consists of specially commissioned essays on topics such as language and language development, hearing and speech perception, education, literacy, cognition, and the complex cultural, social, and psychological issues associated with individuals who are deaf or hard of hearing. Through careful planning, collaboration, and editing, the various topics are interwoven in a manner that allows the reader to understand the current status of research in the field and recognize the opportunities and challenges that lie ahead, providing the most comprehensive reference resource on deaf issues. Written to be accessible to students and practitioners as well as researchers, *The Oxford Handbook of Deaf Studies, Language, and Education* is a uniquely ambitious work that will alter both theoretical and applied landscapes. It surveys a field that has grown dramatically over the past 40 years, since sign languages were first recognized by scientists to be true languages. From work on the linguistics of sign language and parent-child interactions to analyses of school placement and the mapping of brain function in deaf individuals, research across a wide range of disciplines has greatly expanded not just our knowledge of deafness and the deaf, but of the very origins of language, social interaction, and thinking. Bringing together historical information, research, and strategies for teaching and service provision, Marc Marschark and Patricia Elizabeth Spencer have given us what is certain to become the benchmark reference in the field.

Dictionnaire alphabétique et logique de la langue, de la géographie et de l'histoire à l'usage des écoles,... Librairie Droz

This volume provides a unique cross-disciplinary perspective on the external ecological and internal psycholinguistic factors that determine sign bilingualism, its development and maintenance at the individual and societal levels. Multiple aspects concerning the dynamics of contact situations involving a signed and a spoken or a written language are covered in detail, i.e. the development of the languages in bilingual deaf children, cross-modal contact phenomena in the productions of child and adult signers, sign bilingual education concepts and practices in diverse social contexts, deaf educational discourse, sign language planning and interpretation. This state-of-the-art collection is enhanced by a final chapter providing a critical appraisal of the major issues emerging from the individual studies in the light of current assumptions in the broader field of contact linguistics. Given the interdependence of research, policy and practice, the insights gathered in the studies presented are not only of scientific interest, but also bear important implications concerning the perception, understanding and promotion of bilingualism in deaf individuals whose language acquisition and use have been ignored for a long time at the socio-political and scientific levels.

Simultaneity in Signed Languages Gallaudet University Press

UN LIVRE QUI CHANGERA VOTRE FAÇON DE PENSER ET DE VOIR LA VIE « Ah, la vie c'est tout un engagement... Quand on est jeune adulte, on pense que tout est possible, que tous nos rêves se réaliseront... Mais ce n'est pas aussi simple que cela; on est vite rattrapé par la routine, le travail, les paiements à faire, la vie se met à tourner à cent mille à l'heure, avec les courriels, les textos, l'internet, la famille, et tous nos besoins de reconnaissance qu'on cherche à combler via les réseaux sociaux. Et un jour, on frappe un mur... et c'est alors que s'ouvre la porte vers la dimension spirituelle de la vie. On commence à ne pas être bien dans sa peau, on regarde les inégalités sociales de ce monde et tout cela nous amène à poser une grande question : Est-ce que Dieu existe ? Parfois on se répond intérieurement : « Mais s'il existe, comment peut-il laisser tant de problèmes nous bousculer ? Il devrait empêcher que tout aille mal ! Il est le Chef du Bien... Il a toutes les clés... Alors que fait-il ? Comment pense-t-il ? »... Ah oui... c'est ça la vraie question que tu dois comprendre : Comment pense Dieu ? Tu veux réellement le savoir ? Tu es sincèrement prêt à recevoir la Connaissance ?... Très bien. Alors, assis-toi un moment... et lis ce livre. » Ce livre offre des réflexions profondes et nous amène à comprendre que notre âme est comme un ordinateur vivant qui enregistre des mémoires positives et négatives tout au long de notre existence. Ces mémoires agissent comme une multitude d'influences qui interfèrent dans notre fonctionnement quotidien et créent progressivement qui nous sommes, la manière dont nous pensons, etc. Quand nous avons le bon code, ça va... mais si nous avons enregistré des façons de vivre et de penser erronées, alors, avec le temps, nos valeurs se retrouvent piratées par des forces qui nous rendent vulnérables, nous dispersent, nous font perdre nos points de repères et nous éloignent de ce qui est le plus important : notre nature spirituelle. Les différents tomes de la collection LE LIVRE DES ANGES, reconnus comme bestseller et désormais traduits en plusieurs langues, offrent des témoignages uniques des grandes ouvertures de conscience que l'humanité expérimente et traverse en ce moment. Ces livres présentent des solutions profondes permettant de comprendre les mécanismes de fonctionnement de la conscience et de l'inconscient. L'Ange qui est un symbole datant de la nuit des temps, n'est pas ce qu'on pense généralement : un petit bonhomme avec des ailes. En réalité, les Anges sont des États de Conscience Divins qui représentent la Conscience universelle ; cette Conscience existe également en nous et elle est le fondement même du monde dans lequel nous vivons. L'Enseignement de l'Angéologie Traditionnelle active nos pouvoirs spirituels et nos perceptions multidimensionnelles ; il nous aide à déployer la richesse de nos potentialités innées et à acquérir l'autonomie spirituelle. Grâce à l'analyse des rêves et des signes du quotidien, nous pouvons découvrir que les plus grands enseignements sont ceux qu'on reçoit en direct, à l'intérieur de soi.

This book constitutes the thoroughly refereed post-proceedings of the 6th International Workshop on Gesture in Human-Computer Interaction and Simulation, GW 2005, held in May 2005. The 22 revised long papers and 14 revised short papers presented together with 2 invited lectures were carefully selected from numerous submissions during two rounds of reviewing and improvement. The papers

are organized in topical sections on human perception and production of gesture, sign language representation, sign language recognition, vision-based gesture recognition, gesture analysis, gesture synthesis, gesture and music, and gesture interaction in multimodal systems.

In this collection of papers twelve linguists explore a range of interesting properties of 'give' verbs. The volume offers an in-depth look at many morphological, syntactic, and semantic properties of 'give' verbs, including both literal and figurative senses, across languages. Topics include: an apparent zero-morpheme realisation of 'give' in a Papuan language; noun plus causative-like suffix expressing the 'give' concept in Nahuatl; 'give' and other ditransitive constructions in Zulu; the complex verbal morphologies associated with 'give' verbs in Chipewyan, Cora, and Sochiapan Chinantec; the elaborate classificatory system found with 'give' verbs in Chipewyan and Cora; 'give', 'have' and 'take' constructions in Slavic languages; the expression of 'give' in American Sign Language; the origin of the German *es gibt* construction; the extension of 'give' to an adverbial marker in Thai, Khmer, and Vietnamese; the syntax and semantics of Dutch 'give'; first language

acquisition of possession terms.

Gesture in Human-Computer Interaction and Simulation John Benjamins Publishing

People go traveling for two reasons: because they are searching for something, or they are running from something. Katie's world is shattered by the news that her headstrong and bohemian younger sister, Mia, has been found dead at the bottom of a cliff in Bali. The authorities say that Mia jumped—that her death was a suicide. Although they'd hardly spoken to each other since Mia suddenly left on an around-the-world trip six months earlier, Katie refuses to accept that her sister would have taken her own life. Distraught that they never made peace, Katie leaves her orderly, sheltered life in London behind and embarks on a journey to find out the truth. With only the entries in Mia's travel journal as her guide, Katie retraces the last few months of her sister's life and—page by page, country by country—begins to uncover the mystery surrounding her death. . . . Weaving together the exotic settings and suspenseful twists of Alex Garland's *The Beach* with a powerful tale of familial love in the spirit of Rosamund Lupton's *Sister*, *Swimming at Night* is a fast-paced, accomplished, and gripping debut novel of secrets, loss, and forgiveness.

Volume II of the handbook offers a unique collection of exemplary case studies. In five chapters and 99 articles it presents the state of the art on how body movements are used for communication around the world. Topics include the functions of body movements, their contexts of occurrence, their forms and meanings, their integration with speech, and how bodily motion can function as language. By including an interdisciplinary chapter on 'embodiment', volume II explores the body and its role in the grounding of language and communication from one of the most widely discussed current theoretical perspectives. Volume II of the handbook thus entails the following chapters: VI. Gestures across cultures, VII. Body movements: functions, contexts and interactions, VIII. Gesture and language, IX. Embodiment: the body and its role for cognition, emotion, and communication, X. Sign Language: Visible body movements as language. Authors include: Mats Andr en, Richard Asheley, Benjamin Bergen, Ulrike Bohle, Dominique Boutet, Heather Brookes, Penelope Brown, Kensy Cooperrider, Onno Crasborn, Seana Coulson, James Essegby, Maria Graziano, Marianne Gullberg, Simon Harrison, Hermann Kappelhoff, Mardi Kidwell, Irene Kimbara, Stefan Kopp, Grigoriy Kreidlin, Dan Loehr, Irene Mittelberg, Aliyah Morgenstern, Rafael Nu ez, Isabella Poggi, David Quinto-Pozos, Monica Rector, Pio Enrico Ricci-Bitti, G oran Sonesson, Timo Sowa, Gale Stam, Eve Sweetser, Mark Tutton, Ipke Wachsmuth, Linda Waugh, Sherman Wilcox.

Although a number of edited collections deal with either the languages of the world or the languages of particular regions or genetic families, only a few cover sign languages or even include a substantial amount of information on them. This handbook provides information on some 38 sign languages, including basic facts about each of the languages, structural aspects, history and culture

of the Deaf communities, and history of research. This information will be of interest not just to general audiences, including those who are deaf, but also to linguists and students of linguistics. By providing information on sign languages in a manner accessible to a less specialist audience, this volume fills an important gap in the literature.

Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the

mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.
