Beyond Vision Prepper Press

Board the starship Orville and adventure through space on these new missions set between seasons two and three of Seth MacFarlane's hit sci-fi TV show! Executive Producer David A. Goodman writes a double feature that has Captain Ed Mercer and crew investigating an enigmatic alien device and contemplating the consequences of intervention when a primitive civilization faces an off-world threat. In "Launch Day," when seemingly hostile Krill ships cross into Union space, the Orville intercepts. Ed learns they are en route to a planet that left the Planetary Union decades ago under mysterious circumstances. Scans have discovered a moon-sized construct above the planet, and the Krill intend a preemptive strike against the presumed weapon. But is it? In "Heroes," Lieutenant Talla Keyali returns to a planet she surveyed as an Ensign when a quantum signature on the surface suggests significant technological advances since her last visit. Instead, she discovers a spacefaring species has subjugated the locals, transforming their once idyllic society into a grim mining operation. Stymied by the Union's hesitancy to provoke hostilities, Talla must consider how far she's willing to go to help these people and the repercussions of doing so. Collects *The Orville* #1: Launch Day Part 1 of 2, *The Orville* #2: Launch Day Part 2 of 2, *The Orville* #3: Heroes Part 1 of 2, *The Orville* #4: Heroes Part 2 of 2.

Newly arrived in New York in 1882 from Tsarist Russia, the sixteen-year-old Bernard Weinstein discovered an America in

which unionism, socialism, and anarchism were very much in the air. He found a home in the tenements of New York and for the next fifty years he devoted his life to the struggles of fellow Jewish workers. The Jewish Unions in America blends memoir and history to chronicle this time. It describes how Weinstein led countless strikes, held the unions together in the face of retaliation from the bosses, investigated sweatshops and factories with the aid of reformers, and faced down schisms by various factions, including Anarchists and Communists. He co-founded the United Hebrew Trades and wrote speeches, articles and books advancing the cause of the labor movement. From the pages of this book emerges a vivid picture of workers' organizations at the beginning of the twentieth century and a capitalist system that bred exploitation, poverty, and inequality. Although workers' rights have made great progress in the decades since, Weinstein's descriptions of workers with jobs pitted against those without, and American workers against workers abroad, still carry echoes today. The Jewish Unions in America is a testament to the struggles of working people a hundred years ago. But it is also a reminder that workers must still battle to live decent lives in the free market. For the first time, Maurice Wolfthal's readable translation makes Weinstein's Yiddish text available to English readers. It is essential reading for students and scholars of labor history, Jewish history, and the history of American immigration.

Hardbound. In 1986 Michael Bever's Encyclopedia of Materials Science & Engineering defined the field of Materials Science. Since then research into how, by an adjustment to its molecular structure, the properties of a material can be adapted to perform specific applications has greatly increased. The Encyclopedia of Advanced Materials defines the limits of this new area of study, taking into account the many different views and perspectives encountered in research and thinking in the field, as well as emphasizing the multidisciplinary nature of the subject. Advanced Materials are defined as those where first consideration is given to the systematic synthesis and control of the structure of the material in order to provide a precisely tailored set of properties for demanding applications. Coverage includes: Advanced Ceramic Processing; Advanced Optical Materials and Displays; Composite Materials; Computer Mod

Beyond Vision is the first English-language collection of essays on art by Pavel Florensky (1882–1937), Russian philosopher, priest,

linguist, scientist, mathematician – and art historian. In addition to seven essays by Florensky, the book includes a biographical introduction and an examination of Florensky's contribution as an art historian by Nicoletta Misler. Beyond Vision reveals Florensky's fundamental attitudes to the vital questions of construction, composition, chronology, function and destination in the fields of painting, sculpture and design. His reputation as a theologian and philosopher is already established in the English-speaking world, but this first collection in English of his art essays (translated by Wendy Salmond) will be a revelation to those in the field. Pavel Florensky was a true polymath: trained in mathematics and philosophy at Moscow University, he rejected a scholarship in advanced mathematics in order to study theology at the Moscow Theological Academy. He was also an expert linguist, scientist and art historian. A victim of the Soviet government's animosity towards religion, he was condemned to a Siberian labor camp in 1933 where he continued his work under increasingly difficult circumstances. He was executed in 1937.

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. The Disappearing Spoon masterfully fuses science with the classic lore of invention, investigation, and discovery -- from the Big Bang through the end of time. Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.
