Epistolary Community in Print contends that the printed letter is an inherently sociable genre ideally suited to the theorisation of community in early modern England. In manual, prose or poetic form, printed letter collections make private matters public, and in so doing reveal, first how tenuous is the divide between these two realms in the early modern period and, second, how each collection helps to constitute particular communities of readers. Consequently, as Epistolary Community details, epistolary visions of community were

gendered. This book provides a genealogy of epistolary discourse beginning with an introductory discussion of Gabriel Harvey and Edmund Spenser's Wise and Wittie Letters (1580), and opening into chapters on six printed letter collections generated at times of political change. Among the authors whose letters are examined are Angel Day, Michael Drayton, Jacques du Bosque and Margaret Cavendish. Epistolary Community identifies broad patterns that were taking shape, and constantly morphing, in English printed letters from 1580 to 1664, and then considers how the six examples of printed letters selected for discussion manipulate this generic tradition to

articulate ideas of community under specific historical and political circumstances. This study makes a substantial contribution to the rapidly growing field of early modern letters, and demonstrates how the field impacts our understanding of political discourses in circulation between 1580 and 1664, early modern women's writing, print culture and rhetoric.

Research on student learning has

undergone many changes in the last decade. In particular, the research methodology has advanced in many different ways on the level of complexity of data collection and rigor of data analyses. In the quantitative research perspective, many off-line and online measures and statistical analysis techniques have been further meticulously developed. In the qualitative research perspective, a broader range of data collection tools are applied. Also the use of mixed method data analysis is increasing. Although in some research strands on student learning, the mono method approach of quantitative research is still 'the golden rule', in other research strands

we notify more methodological creativity in mixing research paradigms and designs which can be very fruitful advancements for further knowledge development. In this book we focus on the domain of research on learning patterns in which these methodological shifts are in rapid evolution. A variety of international research cases illustrating current practices of empirical research, is presented showing how different methods of research on student learning can be applied and be useful for future research. Benefits an boundaries of the research methods are critically discussed and future perspectives are proposed. *The Census Bureau, a*
