CRISTOPHER HATFIELD

Meat and Poultry Inspection Manual Springer Science & Business Media

Exploring the success factors that combine to deliver this performance. Finding ways to get more from your processes, with examples, case studies and scenarios. Solid-Liquid Filtration is a crucial step in the production of virtually everything in our daily lives, from metals, plastics and pigments through to foods (and crockery) and medicines. Using a practical and applied approach, Trevor Sparks has created a guide that chemical and process engineers can use to help them: Understand how filtration processes affect production processes, production costs, product quality, environmental impact and productivity Optimise process development and project execution, with real examples and supporting software forms and tools Develop reporting tools to monitor processes, and find ways to get more from processes This book's focus is helping process engineers understand their filtration processes better. Its accessible approach and style make it a valuable resource for anyone working in this sector, regardless of prior knowledge or experience. Several examples and scenarios are provided throughout the book in order to help engineers understand the importance of filtration and the effect that it has on the bottom-line. Covers methods for optimizing processes, include process variable, plus laboratory testing, modeling and process troubleshooting Accompanied by optimization software that enables readers to model and plan optimal filtration processes and set ups for their particular circumstance.

Solid-Liquid Filtration Watson-Guptill

This book offers unique and valuable contributions to the field. It offers breadth and inclusiveness. Most existing works on automotive painting cover only a single aspect of this complex topic, such as the chemistry of paint or paint booth technology. Monozukuri and Hitozukuri are Japanese terms that can be translated as "making things" and "developing people" but their implications in Japanese are

richer and more complex than this minimal translation would indicate. The Monozukuri-Hitozukuri perspective is drawn from essential principles on which the Toyota approach to problem-solving and continuous improvement is based. From this perspective, neither painting technology R&D nor painting technology use in manufacturing can be done successfully without integrating technological and human concerns involved with making and learning in the broadest sense, as the hyphen is meant to indicate. The editors provide case studies and examples -- drawn from Mr. Toda's 33 years of experience with automotive painting at Toyota and from Dr. Saito's 18 years experience with IR4TD, the research-for-development group he leads at the University of Kentucky -- that give details on how these two principles can be integrated for successful problem-solving and innovation in industry, in university R&D, and in the collaboration between the two. The book will bring readers up to date on progress in the field over the last decade to provide a basis for and to indicate fruitful directions in future R&D and technology innovation for automotive painting.

The National Shipbuilding Research Program Elsevier

A primer for design professionals across all disciplines that helps them create compelling and original concept designs by hand--as opposed to on the computer--in order to foster collaboration and win clients. In today's design world, technology for expressing ideas is pervasive; CAD models and renderings created with computer software provide an easy option for creating highly rendered pieces. However, the accessibility of this technology means that fewer designers know how to draw by hand, express their ideas spontaneously, and brainstorm effectively. In a unique board binding that mimics a sketchbook, Drawing Ideas provides a complete foundation in the techniques and methods for effectively communicating to an audience through clear and persuasive drawings.
