Acute Care for Elders Lippincott Williams & Wilkins

Acute Care for Elders (ACE) is a model of care designed to improve functional outcomes and to improve the processes for the care of older patients. This model includes: an environment of care designed to promote improved function for older patients; an interdisciplinary team that works together to identify/address the vulnerabilities of the older patients; nursing care plans for prevention of disability; early planning to help prepare the patient to return home and a review of medical care to prevent iatrogenic illness. Acute Care for Elders: A Model for Interdisciplinary Care is an essential new resource aimed at assisting providers in developing and sustaining an ACE program. The interdisciplinary approach provides an introduction to the key

vulnerabilities of older adults and defines the lessons learned from the Acute Care for Elders model. Expertly written chapters describe critical aspects of ACE: the interdisciplinary approach and the focus on function. The fundamental principles of ACE described in this book will further assist hospital leaders to develop, implement, sustain and disseminate the Acute Care for Elders model of care. Acute Care for Elders: A Model for Interdisciplinary Care is of great value to geriatricians, hospitalists, advance practice nurses, social workers and all others who provide high quality care to older patients.

Basic Microbiology and Infection Control for Midwives CRC Press

This guide provides a full range of updated, evidence-based norms and standards that will enable health care providers to give high quality care during pregnancy, delivery and in the postpartum period, considering the needs of the mother and her newborn baby. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth and

during the first week of life (or later) for routine and emergency care. This guide is a guide for clinical decision-making. It facilitates the collection; analysis, classification and use of relevant information by suggesting key questions, essential observations and/or examinations, and recommending appropriate research-based interventions. It promotes the early detection of complications and the initiation of early and appropriate treatment, including time referral, if necessary. Correct use of this guide should help reduce high maternal and perinatal mortality and morbidity rates prevalent in many parts of the developing world, thereby making pregnancy and childbirth safer.
