In the United States, approximately 2.5 million students are diagnosed as having a learning disability and the majority of those children are placed in special education because of an inability to read as expected. As a result of this diagnosis, these children may be placed in special education classrooms - classrooms that are separate from the 'mainstream'

population. For children with learning disabilities, there is likely no place, other than in school, where a student's inability to read as expected leads to this separation from his/her peers. Once school is over, these children play alongside the kids in their neighborhoods, participate in sports teams, and attend community activities. This book looks at the impact of being labeled as learning disabled and separated from peers in school through the eyes of Samson, a middle school student described both as learning disabled and a non-reader. This qualitative

case study explores how Samson, his family, his teachers and this researcher make sense of special education and the complexities of learning to read as an adolescent. Throughout this book, there is a contrasting of the laws and procedures designed to guide special education, with the actual experiences of those impacted by these laws and procedures. Through the three years that Samson was in middle school, this book investigates his perspective on his classes, his interpretation of what it means to 'be' a student in special education, and the

process by which he learns to read. How disability gets created, contested, and discussed is highlighted through the many contexts that allow disability to be recognized and to fade into the background.

This book aims to open up new perspectives in the study of language proficiency by bringing together current research from different fields in psychology and linguistics. All contributions start out from empirical studies, which are then related to applications in language assessment. The book also serves as a survey of recent developments in psycholinguistic research in the Netherlands. The book starts out with a thorough introduction of international literature on models of language proficiency, language development and its assessment. Section 1 deals with first language proficiency and addresses such problems as grammar in early child language, grammatical proficiency and its (in)variance across a range of ages, reading abilities, and writing skills. Section 2 focuses on

multilingual proficiency and deals with test bias in relation to the background of the second language learner, bilingual proficiency in ethnic minority children, the development of the second language learner lexicon, communicative competence of school-age children in the context of second language learning, the assessment of foreign language attrition and the dimensionality in oral foreign language proficiency.

Designed for beginning teachers, this text introduces the teacher as "reflective decision maker," responsible for planning, implementing, evaluating, and making management decisions in the classroom. Each chapters considers a particular teaching skill—first discussing the theory behind it, and then presenting the reader with practice situations in which knowledge about the skill can be applied and evaluated. The Eighth Edition continues to address the importance of

core INTASC standards, and highlights developing issues including the "Digital Divide," the use of personal digital assistants (PDAs) in and outside of the classroom, cooperative learning, and dealing with behavioral issues. Core INTASC standards are addressed in regard to each chapter's objectives. A correlation table between chapter and standard is located on the inside front cover of the text to facilitate documentation of where and how INTASC standards are addressed. New! Marginal notations appear throughout the text to call-out key concepts and assist students with comprehension and review. New! Two-color design helps to organize the information more clearly for students. Chapter 10 focuses on assessment and includes extended discussion of rubrics with additional examples, as well as a new section on electronic portfolios. Chapter 9 has been revised to include a focus on cooperative learning and other strategies brought back from the Sixth Edition of Classroom Teaching Skills. Chapter 8 focuses on issues of behavior management in the classroom, including parental involvement and the role of

record-keeping in resolving behavioral issues. Chapter 7: Teaching and Learning with Technology, has been completely updated. Among the topics covered are the "Digital Divide"—using personal digital assistants in and outside of the classroom, micro media and simulation technology, and new productivity tools for teachers. The opening chapters have an increased emphasis on decision making, teaching models, and determining one's own teaching goals.

Teaching adolescents and learning from them is the paradigm elaborated throughout this second edition of *Adolescents in the Internet Age*. The premise is based upon four assumptions: (1) Adolescents have unique experiences that qualify them as the most credible source on what growing up is like in the current environment; (2) Adolescents are more competent than many adults with tools of technology that will be needed for learning in the future; (3) Adolescents and adults can support mutual development by adopting the concept of reciprocal learning; and (4) The common quest of adolescents to gain adult identity could be attained before employment. Expectations

are the theme for every chapter. The reason expectations are so important is because they influence goals, determine priorities, and are used to evaluate progress and achievements of individuals and institutions. When teacher expectations correspond with the abilities and interests of students, achievement and satisfaction are common outcomes. In contrast, if teachers expect too little, student potential can be undermined. There is also concern if expectations that students have for themselves surpass their abilities. This occurs if teachers do not inform students about their deficits. Multitasking, doing too many things at the same time, detracts from productivity. Sharing accountability depends upon complimentary and attainable expectations that can be met by students, teachers, and parents. To support appropriate expectations, this book for secondary teachers and high school students seeking a broader understanding of their own generation is organized in four parts about aspects of learning and development. (1) Identity expectations introduce traditional perspectives on adolescence, changes related to sources

of learning, evolving emphasis of schools, and ways to support motivation, goal setting, and formation of identity. (2) Cognitive expectations examine mental abilities, academic standards, emergence of the Internet as a learning tool, development of media literacy, creative problem solving, and encouragement of higher order thinking skills. (3) Social expectations explore the need for giving greater attention to social development, importance of teamwork skills, involvement with social networking, adoption of civil behavior, school safety, and values as a basis for ethical behavior and character. (4) Health expectations center on decisions that influence physical health, well-being, and lifestyle choice. Consideration is given to stress management, emotional intelligence, and risk assessment strategies for individual teenagers and the schools that they attend.
