Thoroughly updated to reflect all of the latest concepts and advances in the field, this concise, extensively illustrated text presents the basic science and clinical application of cellular and molecular biology. Functioning as a combined text and atlas, it is essentially two books for the price of one providing a comprehensive, visually engaging histology education from the ground up. Illustrations, tables, chapter summaries and multiple choice questions facilitate comprehension of concepts, and clinical correlations underscore the practical relevance of the material. Superb illustrations—including photomicrographs, electron micrographs, schematic diagrams and drawings—provide a visual grasp and easier retention of difficult concepts. Clinical correlations throughout the text demonstrate clinical applications and

reinforce the idea that histology is pertinent not only to pathology and physiology, but in fact comprises one of the essential bases of clinical practice. New! "Pathological Considerations" section at the end of each chapter. Helpful tables provide an at-a-glance summary statement of key points. Bolded key terms, bulleted lists and chapter summaries emphasize the "need to know" information in every chapter. A combination of USMLE-style questions and image based questions in each chapter.  The first comprehensive reference to invertebrate histology Invertebrate Histology is a groundbreaking text that offers a comprehensive review of histology in invertebrates. Designed for use by anyone studying, diagnosing, or

researching invertebrates, the book covers all major taxonomic groups with details of the histologic features, with color photographs and drawings that clearly demonstrate gross anatomy and histology. The authors, who are each experts in the histology of their respective taxa, bring together the most recent information on the topic into a single, complete volume. An accessible resource, each chapter focuses on a single taxonomic group with salient gross and histologic features that are clearly described in the text and augmented with color photographs and greyscale line drawings. The histologic images are from mostly hematoxylin and eosin stained microscopic slides showing various organ systems at high and low magnification. In addition, each chapter provides helpful tips for invertebrate dissection and information on how to process invertebrates for histology. This important book: Presents detailed information on histology of all major groups of invertebrates Offers a user-friendly text that is organized by taxonomic group for easy reference Features high-quality color photographs and drawings, with slides showing histology and gross photographs to demonstrate anatomy Provides details on invertebrate dissection and processing invertebrates for histology Written for veterinary pathologists, biologists, zoologists, students, and other scientists studying these species, *Invertebrate Histology* offers the most updated information on the topic written by over 20 experts in the field.

The increased exposure to toxins, toxicants and novel drugs has promoted toxicology to become one of the most important areas of research with emerging innovative toxicity testing protocols, techniques, and regulation being placed. Since the bioactivation of many toxins and toxicants and its consequences on human health are not clearly known, this book offers a quick overview of cellular toxicology through the cell, drug and environmental toxicity. This book does not strive to be comprehensive but instead offers a quick overview of principle aspects of toxins and toxicants in order to familiarize the key principles of toxicology. The book is divided into three main sections; the first one discusses the role of mitochondrial dysfunction, oxidative stress and mitochondrial drug development. The second and third sections bring light to forensic toxicology and drug poisoning followed by environmental toxicity.

Color Atlas of Basic Histology

Lippincott Williams & Wilkins

This text serves to introduce students to histology. It provides a thorough and current treatment of the structure, organization and function of the basic tissue types of the body as well as the organ systems which are organized from the basic tissues. The text presents a more modern, cell biological emphasis on the subject, while also bringing out the

clinical correlations of histology in every chapter. Text material is frequently summarized in the many charts, tables and diagrams that are distributed throughout the book. The organization is intended to facilitate the rapid transfer of information from the book to the student. The book is written for medical and dental students as well as other professionals who are introduced to histology during their first year of professional schooling. It is also intended to serve the needs of advanced undergraduates who often take such a course in preparation for professional schools. The book contains limited amounts of biochemistry, physiology, endocrinology and neurobiology, but a sufficient amount of material so that the student can correlate functional information to the microscopic organization of tissues and organs. Hopefully, this mix will permit maximum learning and understanding of structure-function relationships. Since the students who first encounters histology is typically introduced to a large body of information in a limited time period, we have sought to maximize the rapid transfer of information by the extensive use of summary type tables, charts and drawings. In addition, a central portion of the book contains a limited number of color illustrations which will permit the student to view and recognize stained sections of tissues and organs. The color atlas should facilitate the student's view of laboratory work.

Dellmann's Textbook of Veterinary Histology
