*Diabetes and Heart Failure: Basic, Translational, and Clinical Research*  
Springer Nature

'From finding a research topic through to the final write up, this clear guide takes the mystery out of graduate-level research. This book will help your project succeed' - James V. Spickard, Professor of Sociology, University of Redlands, US

Just starting your Master's? Worried about your dissertation? This book is an indispensable guide to writing a successful Master's dissertation. The book begins by addressing issues you'll face in the early stages of writing a dissertation, such as deciding on what to research, planning your project and searching for literature online. It then guides you through different aspects of carrying out your research and writing up, helping you to:

- Write a research proposal
- Choose one or more methods
- Write the introduction and conclusion
- Discuss the literature
- Analyse your findings
- Edit and reference
- Formulate research questions
- Build your argument

The book offers guidance that other books often miss, from dealing with emotional blocks, to ways of identifying your strengths and weaknesses, and improving your writing. It addresses the social aspects of the writing process, such as choosing and working with an advisor, using social media and forming student work groups for added help and inspiration. Each chapter ends with an action plan, which is a resource section that features exercises and reflection questions designed to help you apply

what you've read to your own work. Student Success is a series of essential guides for students of all levels. From how to think critically and write great essays to boosting your employability and managing your wellbeing, the Student Success series helps you study smarter and get the best from your time at university.

This book constitutes the refereed proceedings of the 11th International Conference on Design, User Experience, and Usability, DUXU 2022, held as part of the 23rd International Conference, HCI International 2022, which was held virtually in June/July 2022. The total of 1271 papers and 275 posters included in the HCI 2022 proceedings was carefully reviewed and selected from 5487 submissions. The DUXU 2022 proceedings comprise three volumes; they were organized in the following topical sections: Part I: Processes, Methods, and Tools for UX Design and Evaluation; User Requirements, Preferences, and UX Influential Factors; Usability, Acceptance, and User Experience Assessment. Part II: Emotion, Motivation, and Persuasion Design; Design for Well-being and Health.- Learning Experience Design; Globalization, Localization, and Culture Issues. Part III: Design Thinking and Philosophy; DUXU Case Studies; Design and User Experience in Emerging Technologies.

### *Analysis and Visualization of Citation Networks* Springer

Citation analysis—the exploration of reference patterns in the scholarly and scientific literature—has long been applied in a number of social sciences to

study research impact, knowledge flows, and knowledge networks. It has important information science applications as well, particularly in knowledge representation and in information retrieval. Recent years have seen a burgeoning interest in citation analysis to help address research, management, or information service issues such as university rankings, research evaluation, or knowledge domain visualization. This renewed and growing interest stems from significant improvements in the availability and accessibility of digital bibliographic data (both citation and full text) and of relevant computer technologies. The former provides large amounts of data and the latter the necessary tools for researchers to conduct new types of large-scale citation analysis, even without special access to special data collections. Exciting new developments are emerging this way in many aspects of citation analysis. This book critically examines both theory and practical techniques of citation network analysis and visualization, one of the two main types of citation analysis (the other being evaluative citation analysis). To set the context for its main theme, the book begins with a discussion of the foundations of citation analysis in general, including an overview of what can and what cannot be done with citation analysis (Chapter 1). An in-depth examination of the generally accepted steps and procedures for citation network analysis follows, including the concepts and techniques that are associated with each step (Chapter 2). Individual issues that are particularly important in citation network analysis are then scrutinized, namely: field delineation and data sources for citation analysis (Chapter 3); disambiguation of

names and references (Chapter 4); and visualization of citation networks (Chapter 5). Sufficient technical detail is provided in each chapter so the book can serve as a practical how-to guide to conducting citation network analysis and visualization studies. While the discussion of most of the topics in this book applies to all types of citation analysis, the structure of the text and the details of procedures, examples, and tools covered here are geared to citation network analysis rather than evaluative citation analysis. This conscious choice was based on the authors' observation that, compared to evaluative citation analysis, citation network analysis has not been covered nearly as well by dedicated books, despite the fact that it has not been subject to nearly as much severe criticism and has been substantially enriched in recent years with new theory and techniques from research areas such as network science, social network analysis, or information visualization. Table of Contents: Acknowledgment / Dedications / Foundations of Citation Analysis / Conducting Citation Network Analysis: Steps, Concepts, Techniques, and Tools / Field Delineation and Data Sources for Citation Analysis / Disambiguation in Citation Network Analysis / Visualization of Citation Networks / Appendix 3.3 / Appendix 5.4.2 / Bibliography / Author Biographies

Zusammenfassung: The purpose of this

timely and stimulating book is to thoroughly prepare students, early researchers, and career scholars in establishing their digital identity online. Broadly defined, digital identity is one's online history - that is, it is any trail a person has left in his or her life that is now online. In academics, the issue of digital presence is of utmost importance, as a digital identity frames one's professional reputation, doing so by promoting and defining a person's knowledge and research in their respective field. Written by an accomplished interdisciplinary team of scholars in library science and related fields, this unique guide addresses the development of professional identity as a continuous, dynamic process that is constantly evolving, generally starting from university study and moving through one's professional work life. It goes without saying that building your digital identity as a researcher can be an effective way to publicize your work among your peers, but, the authors emphasize, this activity must be done carefully and skillfully. Indeed, developing these skills can forge a path to professional advancement in hiring, promotion, and tenure. Moreover, a well-designed digital presence can help build networks which can lead to collaborations, increased research, and grants. In addition, having a well-managed digital identity helps an academic engage with the public by strategically disseminating one's knowledge to students, public, and the media. Importantly, it can also help prevent misinformation. Whether readers are new in the field of research and publishing, or have a well-established portfolio of written literature, this handy title will provide vital guidance in establishing a digital

presence, covering a wide range of issues. Key topics discussed, for example, include academic digital platforms and tools to consider when using them, working with academic librarians, social media platforms, choosing digital identity management tools like Open Researcher and Contributor ID or ORCID, the importance of author metrics and the h-index, and maintaining and curating a professional website, to name just several areas discussed. An invaluable contribution to the career literature, *Building Your Academic Research Digital Identity* will enable readers to strategically understand all the tools, platforms, and metrics needed to establish and cultivate one's crucially important digital profile.

This book reviews and synthesizes studies on local and regional occupancy and abundance of Neotropical mammals from central Mexico to South America.

The book focuses primarily on addressing issues of a wide array of mammalian species from a population level in different habitats and ecosystems across the Neotropical region. Occupancy and abundance analyzed through hierarchical approaches with a variety of statistical tools are the central ecological parameters treated in the chapters of this volume. This book will be an updated reference for researchers, professionals, students, wildlife managers, and people interested in mammal ecology and conservation in tropical and subtropical regions.

Volume LNCS 13516 is part of the refereed proceedings of the 24th International Conference on Human-Computer Interaction, HCI 2022, which was held virtually during June 26 to July 1, 2022. A total of 5583 individuals from academia, research institutes, industry, and governmental agencies from 88

countries submitted contributions, and 1276 papers and 275 posters were included in the proceedings that were published just before the start of the conference. Additionally, 296 papers and 181 posters are included in the volumes of the proceedings published after the conference, as "Late Breaking Work" (papers and posters). The contributions thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

Research and Practices Springer Nature

This book will be vital reading for anyone doing research, since using the web to find high quality information is a key research skill. It introduces beginners and experts alike to the most effective techniques for searching the web, assessing and organising information and using it in a range of scenarios from undergraduate essays and projects to PhD research. Nigel Ford shows how using the web poses opportunities and challenges that impact on student research at every level, and he explains the skills needed to navigate the web and use it effectively to produce high quality work. Ford connects online skills to the research process. He helps readers to understand research questions and how to answer them by constructing arguments and presenting evidence in ways that will enhance their impact and credibility. The book includes clear and helpful coverage of beginner and advanced search tools and techniques, as well as the processes of: @!critically evaluating online information @!creating and presenting evidence-based arguments @!organizing, storing and sharing information @!referencing, copyright and plagiarism. As well as providing all the basic techniques students need to find high quality information on the web, this book will help readers use this information

effectively in their own research. Nigel Ford is Professor in the University of Sheffield's Information School.

The book "Research and Publication Ethics" is published by National Law University and Judicial Academy, Assam with the sole objective to help researchers for the responsible conduct of research. National Law University and Judicial Academy, Assam was established by the National Law University and Judicial Academy, Assam Act, 2009 (Act No. XXV of 2009) as the fourteenth National Law University of the country in Guwahati, the capital city of Assam. National Law University and Judicial Academy Assam is committed to inculcate academic excellence for preparing leaders of law who shape the country by their knowledge, wisdom, discovery, and creativity. Further, the University is committed to cultivate an inclusive environment that celebrates plurality and leverages on the creative potential of diversity. The University strives for a distinctive niche in the academic firmament of the country as a forbearer of creative ideation and leadership development. University Grants Commission in its 543rd meeting held on 9th August 2019 approved Two-Credit Course for awareness about publication ethics and publication misconducts entitled "Research and Publication Ethics (RPE)" to be made compulsory for all Ph.D. students for pre-registration coursework. Therefore, the book aims to achieve the objectives of University Grants Commission and intends to provide the concepts of Research and Publication Ethics in a more comprehensive way. It is expected to gain more insights on the Academic

integrity in the realm of new technological influxes.

Serine proteases play significant roles in health and human disease. Abnormal expression and activities of serine proteases have been linked to the pathogenesis of many diseases. The book presents correlation between serine proteases and human diseases. It helps the reader understand classification, catalytic mechanism and types of serine proteases and their role in human disease pathogenesis at mechanistic level. The chapters explain the role of serine proteases in various diseases including respiratory disorders and cancer. It also covers the therapeutic importance of serine proteases as drug target and explains the mechanistic insights of serine proteases inhibitors. Serine protease are known to play crucial role in biological processes but disturbance in their equilibrium can result in serious health conditions. To maintain homeostasis, serine protease inhibitors come in action and inhibit proteases. Several serine protease inhibitors have been identified and many more are being designed as novel compounds for inhibitions of proteases that provide management of comorbidities. Therefore, this book will serve as a useful reference for students and researchers to understand physiological role of serine proteases and their association with initiation and progression of human diseases. It will also help to develop some strategies to develop serine proteases inhibitors as drug target of serine proteases at cellular and molecular level.

This book provides a roadmap for those embarking on a career in STEM, whether in the research or industry realms. Focusing on paths taken by women, the contributors lend their stories, tips and tricks, and hardships they faced entering into fields historically dominated by men. The authors provide practical advice, highlighting soft skills that are not often taught as modules in the classroom. Topics include research collaborations, performance enhancement, the gender lens in research design and development, imposter syndrome felt by many women in science, ethics in science, scaling feminine leadership, being an influencer as a science leader, and time and resources optimization for career advancement in science from resource-poor settings. Others interested in science and its impacts on society will also find the book informative and timely. As an important part of the Organization for Women in Science in the Developing World (OWSD), University of Port Harcourt Branch Book project, the work hopes to inspire women and men, girls and boys to enter and apply themselves to secure the future in STEM.

This book is written for anyone who is interested in how a field of research evolves and the fundamental role of understanding uncertainties involved in different levels of analysis, ranging from macroscopic views to meso- and microscopic ones. We introduce a series of computational and visual analytic techniques, from research areas such as text mining, deep learning, information visualization and science mapping, such that readers can apply these tools to the study of a subject matter of their choice. In addition, we set the diverse set of methods in an integrative context, that draws upon insights from philosophical, sociological, and evolutionary theories of what drives the advances of science, such that the readers of the book can guide their own research with their enriched theoretical foundations.

Scientific knowledge is complex. A subject matter is typically built on its own set of concepts, theories, methodologies and findings, discovered by generations of researchers and practitioners. Scientific knowledge, as known to the scientific community as a whole, experiences constant changes. Some changes are long-lasting, whereas others may be short lived. How can we keep abreast of the state of the art as science advances? How can we effectively and precisely convey the status of the current science to the general public as well as scientists across different disciplines? The study of scientific knowledge in general has been overwhelmingly focused on scientific

knowledge per se. In contrast, the status of scientific knowledge at various levels of granularity has been largely overlooked. This book aims to highlight the role of uncertainties, in developing a better understanding of the status of scientific knowledge at a particular time, and how its status evolves over the course of the development of research. Furthermore, we demonstrate how the knowledge of the types of uncertainties associated with scientific claims serves as an integral and critical part of our domain expertise.

Every industry will be positively affected by blockchain and AI technology at some point. However, blockchain is a misunderstood technology within the publishing realm. The scholarly publishing industry can significantly improve the flow of research, drive down costs, and introduce new efficiencies in the publishing industry with these new technologies. The scholarly publishing industry is in its early days of the digital transformation, and blockchain and AI technology could play a major role in this. However, the industry has been resistant to change. These reasons include but are not limited to staying with legacy systems, cost of new platforms, changing cultures, and understanding and adopting new technologies. With proper research and information provided, the publishing industry can adopt these technologies for beneficial advancements and the generation of a bright future.

Transforming Scholarly Publishing With Blockchain Technologies and AI explores the changing landscape of scholarly

publishing and how blockchain technologies and AI are slowly being integrated and used within the industry. This book covers both the benefits and challenges of implementing technology and provides both cases and new developments. Topics highlighted include business model developments, new efficiencies in scholarly publishing, blockchain in research libraries, knowledge discovery, and blockchain in academic publishing. This book is a valuable reference tool for publishers, IT specialists, technologists, publishing vendors, researchers, academicians, and students who are interested in how blockchain technologies and AI are transforming and developing a modern scholarly publishing industry.

This book presents the proceedings of the Conference on Computer Science, Electronics and Industrial Engineering (CSEI 2020), held in Ambato in October 2020, with participants from 15 countries and guest speakers from Chile, Colombia, France, Japan, Spain, Portugal, and USA. It discusses topics such as the use of metaheuristic for non-deterministic problem solutions, software architectures for supporting e-government initiatives, and the use of electronics in e-learning and industrial environments. It also includes contributions illustrating how new approaches on these converging research areas are impacting the development of human societies around the world into Society 5.0. As such, it is a valuable resource for scholars and practitioners alike.
