The book "The Fundamentals of Hypersensitivity and Allergy" comprises of seven chapters and describes the historical perspective, causes and classification of hypersensitivities, which are important in understanding the current issues regarding conditions in which the immune system which normally serves a protective role has a harmful effect. This book describes the original concept of hypersensitivity and allergy and how sensitive individuals respond to different allergens, drugs and other agents, where the body reacts with an exaggerated immune response that ultimately results in tissue damage. The classification of hypersensitive reactions given by Gell and Coombs with the modifications made to the previous classification are described in detail. Different types of hypersensitivities, their process, the contribution of various cells and molecules to normal immune responses and to hypersensitive reactions are discussed separately. The examples for different types of immune responses are described thoroughly to get a proper understanding of the topic. The clinical manifestations of different types of hypersensitivities and their means of prevention, evaluation and management are also depicted in separate chapters with clear insight. Lastly, the airborne allergens responsible for the allergy, different types of aeroallergens, their effects and allergies caused by them are described. The effect of climate change on aeroallergen production, various diagnostic tests for detection of aero-allergy with their prevention and control are discussed in detail separately. The book contains a reasonable number of diagrams, flowcharts and tables. Besides this, various interesting and self-explanatory illustrations are incorporated to make the book useful to the students for whom it is written. The question bank, which includes long answer type, short answer type and multiple choice questions with their answers at the very end of each chapter, is developed to get a full grasp of the topic.

Janis Kuby's groundbreaking introduction to immunology was the first textbook for the course actually written to be a textbook. Like no other text, it combined an experimental emphasis with extensive pedagogical features to help students grasp basic concepts. Now in a thoroughly updated new edition, Kuby Immunology remains the only undergraduate introduction to immunology written by teachers of the course. In the Kuby tradition, authors Jenni Punt, Sharon Stranford, Patricia Jones, and Judy Owen present the most current topics in an experimental context, conveying the excitement of scientific discovery, and highlight important advances, but do so with the focus on the big picture of the study of immune response, enhanced by unsurpassed pedagogical support for the first-time learner. Punt, Stranford, Jones, and Owen bring an enormous range of teaching and research experiences to the text, as well as a dedication to continue the experiment-based, pedagogical-driven approach of Janis Kuby. For this edition, they have worked chapter by chapter to streamline the coverage, to address topics that students have the most trouble grasping, and to continually remind students where the topic at hand fits in the study of immunology as a whole.
