Where on Earth Dinosaurs and Other Prehistoric Life Editions Autrement

De tous les animaux disparus, les dinosaures sont les plus connus du grand public. Ils ne représentent pourtant qu'une infime partie des innombrables espèces qui ont un jour ou l'autre peuplé la Terre, et il y eut bien des créatures extraordinaires qui n'étaient pas des dinosaures. Après les organismes unicellulaires microscopiques, les premiers animaux munis d'un squelette ou d'une coquille, les poissons ou les premiers vertébrés terrestres, apparaissent, il y a environ 230 millions d'années, les dinosaures, qui vont dominer la terre pendant 160 millions d'années, avant l'arrivée des mammifères et, il y a 5 millions d'années, des premiers humains. Les dinosaures sont donc relativement récents ! Cet atlas retrace l'histoire des dinosauriens - plus de 1 000 espèces ! -, des origines à leur extinction. Pour la première fois ont été cartographiées des informations détaillées à toutes les échelles, depuis les planisphères localisant la répartition des principaux groupes jusqu'aux cartes des sites de fouilles, de l'Equateur aux Pôles. Le propos de cet ouvrage est de montrer la succession des groupes principaux de dinosauriens, en mettant leur évolution en relation avec les grands changements de leur environnement, tels que la dérive des continents et l'évolution des autres formes de vie végétale ou animale. Il éclaire également l'histoire de notre connaissance des dinosaures, des premières découvertes aux développements les plus récents, en montrant comment les progrès de cette connaissance ont accompagné les transformations successives de notre conception de l'histoire de la Terre, de la vie et de l'évolution.

*Dinosaurs* Editeurs Berg International

In *The Dinosaur Atlas*, "renowned dinosaur expert, award-winning children's author, and advisor to the creators of Jurassic Park" offers an informative and humor-packed guide to prehistoric worlds and the bizarre creatures that walked, ate, fought and died there. *The Dinosaur Atlas* takes an up-close look at the amazing world "actually worlds" of an amazing array of dinosaurs. Dinosaurs ruled the earth for more than 150 million years. At first, dog-sized dinosaurs roamed the planet's single warm landmass. Over time, that landmass split in two, and then into more continents. As the world changed, so did the dinosaurs. Bigger and stranger creatures dominated new lands, constantly adapting to changing environments from the forested South Pole to the swamps of what is now the Sahara. By the time the dinosaurs mysteriously died out, 65 million years ago, the continents looked much as they do today. Which fascinating creatures fit with what strange environments? When did the biggest dinosaur walk the earth? How did dinosaurs come to live from the Mongolian deserts to what was then polar Australia? And why did the dinosaur era come to an end? In a field crowded with encyclopedic examinations, *The Atlas of Dinosaurs* fills a void, offering a unique, geographic approach to a timeless topic. Featuring beautiful full-colour maps, stunning illustrations and photographs from today's dinosaur digs, *The Atlas of Dinosaurs* will be a welcome and informative addition to any dinosaur-lover's bookshelf.
