Chinese Arms and

Armour Royal Armouries

"The fabled treasures of China span thousands of years of history. From the exotic Silk Road to the mysterious Great Wall, China's allure is as vast as the country itself. Here, Natasha Bennett

introduces the fascinating world of Chinese arms and armour in the Royal Armouries' collection.

Offering a colourful insight into one of the world's earliest civilisations, she chronicles the development of personal weapons and armour from the late Bronze Age to the early twentieth century. It is ideal for anyone interested in the military and material culture of this absorbing land." -- Publisher's website.

Using eyewitness

accounts of travelers and missionaries to Africa, the oral history of Africans, and the visual evidence of

the weapons themselves, Spring builds a comprehensive cultural and ethnographic survey of traditional arms and armor from several centuries ago to the present.

Symbols of Power and Beauty Arms and Armour Series

This book has a selection of 186 of the most interesting arms in the Jaipur royal palace and discusses them as weapons in their social and historical context. The book breaks new ground in Indian arms scholarship and is also a very readable account that takes in Rajput, Mughal and British Indian history, anthropology and art history. The objects are stunning. One in a series illustrating the collections of the Maharaja Sawai Man Singh II Museum, City Palace, Jaipur, the book will be essential for all museum curators, dealers

and collectors working in the field.

"The history of England records no more charismatic figure than King Henry VIII. His reign reveals an intriguing amalgam of the old and the new, and during it his kingdom emerged as a power to be reckoned with. He was fascinated by weapons and armour, taking a personal interest in their design and manufacture. Henry's impact upon the Royal Armouries' collection is immense. The arms and armour made for him, his personal guard and his army still form the core of the collection. This book is part of a series of introductions to aspects of the Royal Armouries' collection of arms and armour, written by specialists in the field and packed with fascinating information and stunning photography."-- woodslane.com.au.

Arms and Armour Series
In the 18th, 19th and early 20th centuries, the Arab nomads who inhabited a great stretch of the Near East from Aleppo in northern Syria to the southern shores of the Arabian peninsula continued a way of life virtually unchanged from the time of the Prophet Muhammad in the 7th century. Wars and raids were carried out by tribesmen armed like their ancestors with sword, mace and lance. Firearms came slowly to the Bedouin, and multishot weapons were very rare until the end of the 19th century.

Many of us have long been captivated by images of knights in shining armor evoking the age of chivalry and the ideals of Camelot. In this richly illustrated volume, the beauty and complexity of the actual armor worn by European knights and soldiers

comes brilliantly to the fore. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 14.0px Verdana} How to Read European Armor presents a compelling overview of armor in Europe from the Middle Ages through the seventeenth century, the period when armor as an art form achieved its highest levels of stylistic beauty and functional perfection. During that time, skilled armorers developed ingenious solutions for protecting the body with armor that was effective and often amazingly ornate. This volume features historically important examples of armor such as a suit made in the royal workshops of Greenwich, England, almost certainly for King Henry VIII himself; a masterfully etched work created by a famed Nuremberg armorer for Emperor Ferdinand I; and sumptuous armor for the warhorse of an Italian nobleman. The engaging text extensively examines armor's complex parts and many decorative techniques, and sets the lively historical context for how European armor thrived in the field of combat, in tournaments, and on ceremonial occasions. A book for any

reader drawn to the chivalric and courtly life of Europe, *How to Read European Armor* highlights the many innovations of armorers who created these legendary marvels of art and technology.

Islamic Arms and Armour, being part of the Islamic Arts Museum Malaysia collection, represents the finest and most exquisite form of art produced in the Islamic world. Despite popular misconception, many of this weaponry were not mainly produced for battles or warfare. They are, in fact, primarily produced as expressions of social status, accessories in ceremonial gatherings and as diplomatic gifts.

Furthermore, their decorations reflect the finest workmanship in gemstone setting, intricate calligraphic inscription with gold and silver inlay, as well as in the art of metallurgy.

These arms and armour, being the pride of the society, were always portrayed in major epic stories in addition to miniature paintings. The miniature paintings highlight the beauty and effectiveness of Islamic arms, illustrating the

tactics and strategies that attest to the pre-eminence of Muslim warfare. Islamic Arts Museum Malaysia is publishing a catalogue of over 200 objects of arms and armour entitled "Symbol of Power and Beauty: The collection of the Islamic Arts Museum Malaysia". The artefacts included in this catalogue reflect the arms and armour from around the Islamic dynasties, beautified with elaborate miniature paintings. The catalogue, which measures 24cm (W) x 29cm (H), offers around 220 pages of stimulating journey through the history and culture of the Islamic world.

-The book's foreword has been written by the 37th Custodian of Marwar-Jodhpur, His Highness Maharaja Gaj Singhji Sahib Bahadur II of Jodhpur-Marwar -Though the Rajputs are the premier warrior society in India, these books are the first of their kind to focus on their arms and armor - The volumes not only advance knowledge of the subject, but also reflect on the significance of the

Rathores in history, and their 556-year-old fort Some years ago the study of arms and armor of the subcontinent reached a plateau where enough was known to allow curators and collectors a veneer of authority when writing and speaking about the topic. This book shows how very thin that veneer was. For political and more recently commercial reasons the cultural history of the subcontinent has been largely expressed through the Mughal experience of India. Whilst it is true that the Muslim Mughals dominated India the empire they ruled was predominantly Hindu. This book reclaims the Hindu contribution to the military culture of the Mughal period. The Rajputs were very closely aligned to the Mughals from the reign of Akbar in the sixteenth century but they retained their own distinctive values. The armory at Mehrangarh helps us to enter an unfamiliar world. A tradition of courage and self-sacrifice was conserved in music and poetry, an ideology so extreme that scholars have struggled to concede its existence. This radical book challenges arms and

armor orthodoxy and is essential reading for scholars, collectors and dealers interested in India and its wider culture. An Introduction to Islamic Arms Indigo Publishing Armor and weaponry were central to Islamic culture not only as a means of conquest and the spread of the faith, but also as symbols of status, wealth, and power. The finest arms were made by master craftsmen working with the leading designers, goldsmiths, and jewelers, whose work transformed utilitarian military equipment into courtly works of art. This book reveals the diversity and artistic quality of one of the most important and encyclopedic collections of its kind in the West. The Metropolitan Museum's holdings span ten centuries and include representative pieces from almost every Islamic culture from Spain to the Caucasus. The collection includes rare early works, among them the oldest documented Islamic sword, and is rich in helmets and body armor, decorated with calligraphy and arabesques, that were worn in Iran and Anatolia in the late fifteenth century. Other masterpieces include a jeweled short sword

(yatagan) with a blade of "watered" steel that comes from the court of Süleyman the Magnificent, a seventeenth-century gold-inlaid armor associated with Shah Jahan, and two gold-inlaid flintlock firearms belonging to the guard of Tipu Sultan of Mysore. Presenting 126 objects, each handsomely photographed and richly documented with a detailed description and discussion of its technical, historical, and artistic importance, this overview of the Met's holdings is supplemented by an introductory essay on the formation of the collection, and appendixes on iconography and on Turkman-style armor. *Japanese Arms and Armour* Smithsonian Books (DC)

Japan's inherited traditions and technological skill are reflected in the material culture of the nation. Here, Curator Emeritus Ian Bottomley describes one of the most popular parts of the Royal Armouries' collection. He offers an oversight of Japanese arms and armour from the Middle Ages to the twentieth century, describing sword-making, the rise of

firearms, and highlights from key military campaigns.

- An introduction and overview to the arms and armor of the Indian region- The book is designed for easy use with pull out details from objects and timelines, maps and explanations of design details

Arms & Armour Of India, Nepal & Sri Lanka is a very visually-driven and broad-based introduction to the unique world of arms and armor of the Indian region, encompassing India, Pakistan, Nepal, and Sri Lanka, areas with strong martial traditions. It provides an overview of types of arms and armor, with extensive geographical and historical context with many illustrated maps, their decoration and methods of adornment, as well as the iconographic and religious symbology. A unique and valuable feature of the book is an illustrated glossary. It is specifically designed to suit the needs of anyone wanting to familiarize themselves with this topic and the region. It can serve as a reference for the novice collector, and

as an image resource for experts. This would include anyone interested in arms and armor in general, antique dealers, museums, general art market, educators, and of course, collectors. There has been increased interest in both collecting and scholarship regarding Indic arms and armor.

Nearly every major auction on Indian and Islamic material tends to include arms and armor.

Weapons of the Islamic World

This is a lavishly illustrated presentation of the Nasser D. Khalili Collection of Islamic Art's collection of arms and armor. The items range in date from the seventh to the nineteenth centuries A.D. In avoiding the strictly typological classification of most previous catalogues of the subject, the aim is to give a full sense of the panoply of warfare: the stirrup, the drum, and the talismanic shirt were as important to the Muslim warrior as the sword and the mail shirt. David Alexander, the leading authority on Islamic arms and armor, has provided a detailed scholarly guide to this outstanding collection.

The Arts of War

The primary focus of this book is on the arms and

armour of Europe, but also included are neighbouring cultures where these had a direct influence on developments and changes within Europe, from late Roman cavalry armour, Byzantium and the East, to the influence of the Golden Horde.

How to Read European Armor

This lavishly illustrated volume details the armies of western and central European states and their client kingdoms in the Middle East in over three centuries of military development and almost continuous warfare -- a decisive period when Christendom, Islam, and the Mongol world came into violent and sustained conflict, this definitive study pinpoints the evolving military sciences, technologies, and practices in an era of revolutionary change.

The Armour and Arms of Henry VIII

Few centuries in world history have had such a profound and long-lasting impact as the first hundred years of Islamic history. In this book, David Nicolle examines the extensive Islamic conquests between AD 632 and 750. These years saw the religion and culture of Islam erupt

from the Arabian Peninsula and spread across an area far larger than that of the Roman Empire. The effects of this rapid expansion were to shape European affairs for centuries to come. This book examines the social and military history of the period, describing how and why the Islamic expansion was so successful.

AFRICAN ARMS & ARMOR
India is a vast sub-continent, with a complex history and a great array of languages, cultures and religions. This short introduction to one aspect of that great culture is intended merely as an appetiser, and is by no means intended as the last word on any aspect of Indian arms and armour. By 'India' I mean the whole Indian sub-continent rather than any political term. The history which forms a background to the story of Indian arms and armour saw empires rise and fall, but the remarkable constancy in the exquisite weapons used by their defenders and opponents marks Indian arms and armour out as something beyond mere statehood. was the catalyst to all sorts of studies of Indian culture and it is no accident that much of the pioneering

work on Indian arms and armour was carried out by English scholars. The most notable of these, and the author of the first serious study of Indian armour and arms, was William Egerton, Lord Egerton of Tatton in Cheshire, whose catalogue of the collection of the Indian Museum in London (a collection now absorbed into the Victoria and Albert Museum) appeared in 1880. Yet despite a few important works in the 20th century, such as Philip Rawson's *The Indian Sword* and Russell Robinson's *Oriental Armour*, and new works such as Robert Elgood's *Hindu Arms and Ritual in The 21st Century*, the scientific study of Indian arms and armour has not advanced to the level, say, of Japanese arms and armour. armour in the Royal Armouries. Almost all the holdings are concentrated in the period from the formation of the Mughal empire in the 16th century to the end of the 19th century when western firearms technology had been widely adopted, and it is hoped that this small publication will help in making an important western collection of Indian armour and arms

accessible.

The dramatic eruption of the Arab peoples from Arabia after their adoption

of the Muslim faith in the 7th century remains one of the most extraordinary events in world history. By the end of that century they ruled a state that stretched from the Atlantic to India, from southern Arabia to Central Asia, covering an area far greater than that of the Roman Empire. Therefore warfare, at least among the nomadic bedouin, was a normal aspect of life. Complemented by numerous illustrations, including eight full page colour plates by Angus McBride, this detailed text by David Nicolle tells the real story of the armies of the Muslim conquest.
