The text also features sample guidelines and safety checklists from agencies and associations that demonstrate how organizations might plan for risk and communicate safety information. Readers also consider the types of postings and equipment they will need in order to communicate their risk management plans, and they are given real-life situations in which a risk management plan is needed and are prompted to consider why

and how to create a plan for such situations. The resource will help students and professionals plan for and manage risk. The Food and Agriculture Organization of the United Nations (FAO) and the World Organisation for Animal Health (OIE) declared in 2011 the global eradication of rinderpest and resolved to implement follow-up measures to maintain world freedom from the disease. Rinderpest is the only animal disease that has been globally eradicated. The greatest risk for rinderpest (RP) re-emergence is the release, whether intentional or

unintentional, of infectious material from a Rinderpest Holding Facility (RHF) among susceptible animal populations. The re-emergence of disease would be a global animal health emergency, leading to the loss of global disease freedom and threatening livelihoods, food security, international trade and national economies. The Global Rinderpest Action Plan (GRAP) aims to ensure continued global freedom from rinderpest by outlining the actions

necessary to prepare for, respond to and recover from a RP outbreak.
