The United States Government Printing Office (GPO) was created in June 1860, and is an agency of the U.S. federal government based in Washington D.C. The office prints documents produced by and for the federal government, including Congress, the Supreme Court, the Executive Office of the President and other executive departments, and independent agencies. A hearing is a meeting of the Senate, House, joint or certain Government committee that is open to the public so that they can listen in on the opinions of the legislation. Hearings can also be held to explore certain topics or a current issue. It typically takes between two months up to two years to be published. This is one of those hearings.

This book integrates 30 years of mercury research on the Florida Everglades to inform scientists and policy makers. The Everglades is an iconic ecosystem by virtue of its expanse; diversity of biota; and multiple international designations. Despite this, the Everglades has been subjected to multiple threats including: habitat loss, hydrologic alterations, invasive species; and altered water quality. Less well recognized as a threat to Everglades human use and wildlife populations is the toxic metal, mercury. This Volume focuses on sources of mercury to the Everglades from the late-1980's when there was bewilderment as to why there were very high levels of mercury in the Everglades food web. Soon came the finding that mercury loadings from atmospheric deposition accounted for over 95% of total input to the Everglades which resulted in Florida conducting the most comprehensive mercury monitoring and modeling study performed to date. Topics discussed in this Volume include: (1) Why atmospheric deposition fluxes of mercury to the Everglades are amongst the highest in the U.S; (2) That these are overwhelmingly from sources outside of the U.S; (3) That mitigation strategies for resolving the elevated food web mercury problem in the Everglades that rely solely on reducing atmospheric mercury inputs will not be effective for many decades; (4) That consideration of other strategies, in particular controlling factors related to Everglades mercury biogeochemical cycling seem warranted.

In "Make It Your Own Law Firm: The Ultimate Law Student's Guide to Owning, Managing, and Marketing Your Own Successful Law Firm" Spencer Aronfeld writes a personal and revealing account on how to start your own law firm. Whether you are in law school, recently graduated or a practicing attorney thinking of establishing your own law firm, this book provides a step-by-step road map. Aronfeld started his own law practice upon graduation from law school. He provides practical advice that will enable anyone with a deep passion to practice law to become the lawyer that they always wanted to be. Here is what lawyers are saying: "Whether you have ever considered starting your own firm or

simply want to improve your practice at your existing firm (whether big or small), I urge you to purchase the book Make It Your Own Law Firm by Spencer Aronfeld, a trial attorney in Miami, Florida. I recommend you buy it not so much for the helpful advice he gives on how to develop your practice (and theres plenty of that) but more for the writing. What Spencer does, which few non-fiction writers can do, is to move you emotionally. He tells stories and puts you in the middle of them with him and makes you feel what he did. It is a unique and valuable gift for a lawyer, because ultimately we are story-tellers and we are tasked not only to affect the jurors minds but also to touch their hearts. Spencers writing style demonstrates he is the consummate story-teller and his diction and cadence and style are worth emulating. So, buy the book. Yes, it has great practice tips. But buy it because you will see what great writing is about. Clear, direct, moving and effective. Keep writing Spencer." Frank Ramos, Esquire

The report reviews a U.S. Department of the Interior research program, finding that it provides key information to support the restoration of the Florida Everglades and to better assess the impact of hydrologic change on the ecosystem. However, the program needs more funding, better management and broader distribution of its findings. The report suggests that strategic investments in Everglades research will increase the chances of reaching restoration goals while reducing overall costs.

"Today's Everglades City was originally called 'Everglade' when it was but a vast formidable wilderness. ...it became Everglades (plural) in 1923. This former desolate acreage, located approximately 45 miles south of Naples, was soon bustling, with not only shops and homes, but also... the Western Hemisphere entrance of the Everglades National Park, bringing in tourists from around the world. ...Approximately 500 residents live in

Everglades City year-round today."--Back cover.

Before 1947, when Marjory Stoneman Douglas named The Everglades a "river of grass," most people considered the area worthless. She brought the world's attention to the need to preserve The Everglades. In the Afterword, Michael Grunwald tells us what has happened to them since then. Grunwald points out that in 1947 the government was in the midst of establishing the Everglades National Park and turning loose the Army Corps of Engineers to control floods--both of which seemed like saviors for the Glades. But neither turned out to be the answer. Working from the research he did for his book, *The Swamp*, Grunwald offers an account of what went wrong and the many attempts to fix it, beginning with *Save Our Everglades*, which Douglas declared was "not nearly enough." Grunwald then lays out the intricacies (and inanities) of the more recent and ongoing CERP, the hugely expensive Comprehensive Everglades Restoration Plan.

This report is a product of the Committee on Restoration of the Greater Everglades Ecosystem (CROGEE), which provides consensus advice to the South Florida Ecosystem Restoration Task Force. The Task Force was established in 1993 and was codified in the 1996 Water Resources Development Act (WRDA); its responsibilities include the development of a comprehensive plan for restoring, preserving and protecting the South Florida ecosystem, and the coordination of related research. The CROGEE works under the auspices of the Water Science and Technology Board and the Board on Environmental Studies and Toxicology of the National Research Council. The CROGEE's mandate includes providing the Task Force not only with scientific overview and technical assessment of the restoration activities and plans, but also providing focused advice on technical topics of importance to the restoration efforts. One such topic was to examine "the

linkage between the upstream components of the greater Everglades and adjacent coastal ecosystems." This report addresses this issue by breaking it down into three major questions: What is the present state of knowledge of Florida Bay ("the Bay") on scientific issues that relate to the success of the overall CERP? What are the potential long-term effects of Everglades restoration as currently designed on the nature and condition of the Bay? What are the critical science questions that should be answered early in the restoration process to design a system that benefits not only the terrestrial and freshwater aquatic Everglades but the Bay as well? This study was inspired in part by the 2001 Florida Bay and Adjacent Marine Systems Science Conference held on April 23-26, 2001 in Key Largo, Florida. An overlapping meeting of the CROGEE was held at the same location on April 26-28, 2001. The conference was organized by the Program Management Committee (PMC) of the Florida Bay and Adjacent Marine Systems Science Program. The PMC organized the conference around five questions suggested by the Florida Bay Science Oversight Panel. These questions related to circulation, salinity patterns, and outflows of the Bay; nutrients and the nutrient budget; onset, persistence and fate of planktonic algal blooms; temporal and spatial changes in seagrasses and the hardbottom community; and recruitment, growth and survivorship of higher trophic level species. Some of these issues are discussed in the present report. However, as noted earlier, this report focuses on the subset of questions that relate to linkages between the Bay and the upstream portion of the Everglades system that arose at the 2001 Florida Bay Conference.

The field of sustainability continues to evolve as a discipline. The world is facing multiple sustainability challenges such as climate change, water depletion, ecosystem loss, and environmental racism. The Handbook of Sustainability will provide a comprehensive reference for the field that examines in depth the major themes within what are known as the three E's of sustainability: environment, equity, and economics. These three themes will serve as the main organizing body of the work. In addition, the work will include sections on history and sustainability, major figures in the development of sustainability as a discipline, and important organizations that contributed or

that continue to contribute to sustainability as a field. The work is explicitly global in scope as it considers the very different issues associated with sustainability in the global north and south Everglades City
