Wild, Funny Brain Twisters

Sterling
"Touches on a dizzying
array of subjects,
including UV rays, inert
gases, fossils, meteorites,
microwaves, rainbows . . .
Like many a good teacher,

Berman uses humor to
entertain his audience
and liven things up."
—Los Angeles Times Bob
Berman is motivated by a
straightforward
philosophy: everyone can
understand science—and
it's fun, too. In Strange
Universe, he pokes into
the bizarre and
astonishingly true
scientific facts that
determine the world

around us. Geared to the
nonscientist, Berman's
original essays are filled
with the trademark wit
and cleverness that has
earned him acclaim over
many years for his
columns in Astronomy
and Discover magazines.
He emphasizes curiosities
of the natural world to
which everyone can
relate, and dishes on the
little-known secrets about

space and some of science's biggest blunders (including a very embarrassing moment from Buzz Aldrin's trip to the moon). Fascinating to anyone interested in the wonders of our world and the cosmos beyond, *Strange Universe* will make you smile and think. [Absolute Expert: Space](#) Gray & Company, Publishers
The summer of 1871, a team of thirty-two men set out on the first scientific expedition across Yellowstone. Through uncharted

territory, some of the day's most renowned scientists and artists explored, sampled, sketched, and photographed the region's breathtaking wonders—from its white-capped mountain vistas and thundering falls to its burping mud pots and cauldrons of molten magma. At the end of their adventure, the survey packed up their specimens and boarded trains headed east, determined to convince Congress that the country needed to preserve the

land from commercial development. They returned with “stories of wonder hardly short of fairy tales,” to quote the *New York Times*. With the support of conservationists such as Ralph Waldo Emerson, Henry David Thoreau, Frederick Law Olmsted, and John Muir, the importance of a national park was secured. On March 1, 1872, Ulysses S. Grant signed the Yellowstone Park Bill into law. It set aside over two million acres of one-of-a-kind wilderness as “a

great national park for the benefit and enjoyment of people." This important and fascinating book will introduce young adults to the astonishing adventure that led to "the best idea America ever had." Today over 130 countries have copied the Yellowstone model, and billions of acres of critical habitat and spectacular scenery are being preserved for all of us to enjoy. This book has a wonderful ecological and historical message for readers ages 12 and up. No book about Yellowstone's founding

has been written for this age group before, yet Yellowstone National Park is a major destination for many families, so many readers will likely have heard of Yellowstone or even have visited there. This is a great book for any school library or for history or science classrooms in middle and high school, where information can be used for research projects. *Many More of Janice VanCleave's Wild, Wacky, and Weird Physics Experiments* The Rosen Publishing Group, Inc

In a series of fun and involving hands-on chemistry experiments, kids observe the effect of molecular motion, try to inflate a balloon inside of a bottle, demonstrate the cleaning of water by capillary action, discover how detergent causes other molecules to move, and make water appear to boil with only the touch of a finger. They will also demonstrate how salt makes it harder for water to freeze, learn how to grow salt crystals and how to produce an elastic material, and observe

liquids that will and will not mix together.

Featuring color illustrations and safe, simple step-by-step instructions, Janice VanCleave again shows just how much fun science can be.

[Totally Random Questions Volume 1](#) Createspace Independent Publishing Platform

In a series of fun and involving hands-on biology experiments, kids learn why plants seek light, how to grow plants from carrot tops, how water protects plants from freezing temperatures, why earthworms surface during a heavy rain, and why camels can live in the desert for weeks without

drinking water. They will also determine and demonstrate the effect temperature has on the growth of bacteria, whether or not the light from fireflies gives off heat, and how to determine the age of a fish. Featuring color illustrations and safe, simple step-by-step instructions, Janice VanCleave again shows just how much fun science can be.

Strange Universe The Rosen Publishing Group, Inc
In a series of fun and

involving hands-on biology experiments, kids observe the effect of osmosis on a raisin, demonstrate how leaves and stems can act like a straw, determine which side of a plant leaf takes in gases, demonstrate the loss of moisture from leaves, and discover the effects of gravity on plant growth. They will also determine the direction of winding plants, how shade affects plant growth, how plants grow toward light, and the effect of temperature on seed growth. Featuring color

illustrations and safe, simple step-by-step instructions, Janice VanCleave again shows just how much fun science can be.

Wordplay The Rosen Publishing Group, Inc
Are there volcanoes in space? Is a cloud heavier than an elephant? Why don't woodpeckers get concussions? Discover the answers to these questions and more in this kid-friendly book of fun, fascinating Q&As! Got a random question? This book has the answer! Packed with surprising

facts and colorful photos, *Totally Random Questions, Volume 1* presents snack-sized answers to a series of wacky, weird, but always amazing questions about our wonderfully wild world! Kids will love testing their knowledge and stumping their friends with the unlikely info they'll find inside covering animals, science, sports, food, pop culture, and more. Written and designed to make any kid an instant genius—and maybe even a few parents too! Find more

wacky Q&As in *Totally Random Questions* volumes 1-8, or tempt your trivia-loving kid with our fact-packed *Totally Random Facts* books! [Would You Rather Challenge Book - Gross Edition](#) The Rosen Publishing Group, Inc A collection of word games, literary exercises, activities, and puzzles, including mysteries to solve and stories to finish. **Weird But True! 2022** RH Childrens Books Ever wanted to take apart the microwave to see how it works? Crack open your

computer and peek inside? Intrigued by how things work? So are we! That's why we're dissecting all kinds of things from rubber erasers to tractor beams! Read along as *National Geographic Kids unplugs*, unravels, and reveals how things do what they do. Complete with "Tales from the Lab," true stories, biographies of real scientists and engineers, exciting diagrams and illustrations, accessible explanations, trivia, and fun features, this cool book explains it all!

Janice VanCleave's Wild, Wacky, and Weird Biology Experiments Sterling Publishing Company, Inc. What makes this collection of mind-boggling word search puzzles unlike any other? The shapes of each and every puzzle can be downright wacky at times. Instead of looking for hidden words in a jumble of letters that usually comes in a ho-hum square or rectangle, the words in these grids form distinctive picture outlines that are directly related to the puzzles' themes. You

get a grid in the shape of a charging bull, for example, in a puzzle about the stock market. There are 58 word searches in all and each one is fun and challenging as well as a little different. Book jacket.

Animals abound in Dr. Seuss's Caldecott Honor-winning picture book *If I Ran the Zoo*. Gerald McGrew imagines the myriad of animals

he'd have in his very own zoo, and the adventures he'll have to go on in order to gather them all. Featuring everything from a lion with ten feet to a Fizza-ma-Wizza-ma-Dill, this is a classic Seussian crowd-pleaser. In fact, one of Gerald's creatures has even become a part of the language: the Nerd!
