Cities and Social Change ISTE (Internl Soc Tech Educ

In *The Environment and the People in American Cities*, Dorceta E. Taylor provides an in-depth examination of the development of urban environments, and urban environmentalism, in the United States. Taylor focuses on the evolution of the city, the emergence of elite reformers, the framing of environmental problems, and the perceptions of and responses to breakdowns in social order, from the seventeenth century through the twentieth. She demonstrates how social inequalities repeatedly informed the adjudication of questions related to health, safety, and land access and use. While many accounts of environmental history begin and end with wildlife and wilderness, Taylor shows that the city offers important clues to understanding the evolution of American environmental activism. Taylor traces the progression of several major thrusts in urban environmental activism, including the alleviation of poverty; sanitary reform and public health;

safe, affordable, and adequate housing; parks, playgrounds, and open space; occupational health and safety; consumer protection (food and product safety); and land use and urban planning. At the same time, she presents a historical analysis of the ways race, class, and gender shaped experiences and perceptions of the environment as well as environmental activism and the construction of environmental discourses. Throughout her analysis, Taylor illuminates connections between the social and environmental conflicts of the past and those of the present. She describes the displacement of people of color for the production of natural open space for the white and wealthy, the close proximity between garbage and communities of color in early America, the cozy relationship between middle-class environmentalists and the business community, and the continuous resistance against environmental inequalities on the part of ordinary residents from marginal communities.

Making Connections in Elementary and Middle School Social Studies Routledge
 Fifteen chess-enhanced lesson plans address National Council for the Social Studies standards for grades 4-8 and help prepare students to succeed in University Interscholastic League (UIL) Chess

Puzzle. Implement the National Council for the Social Studies (NCSS) curriculum standards in your classroom with *People, Places, Checkmates: Teaching Social Studies with Chess*. In this unique volume, 15 lesson plans teach culture, history, geography, and citizenship through the history of chess and its relationship to art, civics, culture, economics, geography, government, and technology. This book will also help educators and librarians prepare students to succeed in University Interscholastic League (UIL) Chess Puzzle. Each 40-minute lesson plan includes an NCSS theme, materials and sources, procedure, and evaluation. Each lesson is followed by an optional 10-25 minute chess exercise, composed of teacher background, procedure and materials, expected time, and evaluation. A separate chapter teaches the chess basics necessary for your students to actually play chess and successfully complete the optional exercises. Lesson plans complement upper elementary and middle school curricula in world history, U.S. history, geography, and social studies.

Newly updated: “An enjoyable introduction to American working-class history.” —The American Prospect Praised for its “impressive even-handedness”, From the Folks Who Brought You the Weekend has set the standard for viewing American history through the prism of working people (Publishers Weekly, starred review). From indentured servants and slaves in seventeenth-century Chesapeake to high-tech workers in contemporary Silicon Valley, the book “[puts] a human face on the people, places, events, and social conditions that have shaped the evolution of organized labor”, enlivened by illustrations from the celebrated comics journalist Joe Sacco (Library Journal). Now, the authors have added a wealth of fresh analysis of labor’s role in American life, with new material on sex workers, disability issues, labor’s relation to the global justice movement and the immigrants’ rights movement, the 2005 split in the AFL-CIO and the movement civil wars that followed, and the crucial emergence of worker centers and their relationships to unions. With two entirely new chapters—one on global developments such as offshoring and a second on the 2016 election and unions’ relationships to Trump—this is an “extraordinarily fine addition to U.S. history [that] could become an evergreen . . . comparable to Howard Zinn’s award-winning *A People’s History of the United States*” (Publishers Weekly). “A marvelously informed, carefully crafted, far-ranging history of working people.” —Noam Chomsky

Palaces for the People Springer

This volume is a cogent empirical analysis of the interplay between a region’s natural amenities and its socioeconomic evolution. It focuses on the rural sectors of America’s Intermountain West region, which lies between the Cascades and Sierra Nevada mountains to the west and the Rocky Mountains to the east. Coherently structured and meticulously detailed, it adds much to our understanding of the ways an area’s forests, lakes, mountains, parkland and historic attractions affect residents’ sense of well-being as well as the sociodemographic and economic changes they experience. The book examines patterns of growth and change linked to the emergence of ‘New West’ conditions, assessing their implications for the wider community as well as discussing the impact these trends could have on the consumption of natural resources. It also points to ways in which communities and their development can be managed sustainably. The tight geographical focus of this valuable resource ensures a depth of analysis which can be applied to similar regions worldwide. Based on a large-scale, random-sample survey of both full-time and seasonal residents, it provides a much-needed overview of the macro-level economic, demographic, and social transformations affecting rural communities in America. As such, the book has relevance for all researchers concerned with rural development, the changes impacting rural landscapes, and natural resource management.

National Standards for History The New Press

The first of two volumes on the social history of Wales in the period 1870–1948, *People, Places and Passions* concentrates on the social events and changes which created and forged Wales into the mid-twentieth century. This volume considers a range of social changes little considered elsewhere by studies in Welsh history, accounting for the role played by the people of Wales in times of war and the age of the British Empire, and in technological change and innovation, as they travelled the developing capitalist and consumerist world in search of fame and fortune.

Quality of Life and Climate Change: Impacts, Sustainable Adaptation, and Social-Ecological Resilience Routledge

This open access book is about public open spaces, about people, and about the relationship between them and the role of technology in this relationship. It is about different approaches, methods, empirical studies, and concerns about a phenomenon that is increasingly being in the centre of sciences and strategies – the penetration of digital technologies in the urban space. As the main outcome of the CyberParks Project, this book aims at fostering the understanding about the current and future interactions of the nexus people, public spaces and technology. It addresses a wide range of challenges and multidisciplinary perspectives on emerging phenomena related to the penetration of technology in people’s lifestyles - affecting therefore the whole society, and with this, the production and use of public spaces. Cyberparks coined the term cyberpark to describe the mediated public space, that emerging type of urban spaces where nature and cybertechnologies blend together to generate hybrid experiences and enhance quality of life.

The Environment and the People in American Cities, 1600s-1900s Holt Rinehart & Winston

This textbook of essays by leading critical urbanists is a compelling introduction to an important field of study; it interrogates contemporary conflicts and contradictions inherent in the social experience of living in cities that are undergoing neoliberal restructuring, and grapples with profound questions and challenging policy considerations about diversity, equity, and justice. A

stimulant to debate in any undergraduate urban studies classroom, this book will inspire a new generation of urban social scholars. - Alison Bain, York University "Stages a lively encounter with different understandings of urban production and experience, and does so by bringing together an exciting group of scholars working across a diversity of theoretical and geographical contexts. The book focuses on some of the central conceptual and political challenges of contemporary cities, including inequality and poverty, justice and democracy, and everyday life and urban imaginaries, providing a critical platform through which to ask how we might work towards alternative forms of urban living." - Colin McFarlane Durham University What is the city? What is the nature of living in the city? This new textbook provides students with an in-depth understanding of the central issues associated with the city and how living in a city impacts its inhabitants. Theoretically informed and thematically rich, the book is edited by leading scholars in the field and contains an eminent, international cast of contributors and contributions. It provides a critical analysis of the key thinkers, themes and paradigms dealing with the relationship between the built environment and urban life. It includes illustrative case studies, questions for discussion, further reading and web links. Examining the contradictions, conflicts and complexities of city living, the book is an essential resource for students looking to get to grip with the different theoretical and substantive approaches that make up the diverse and rich study of the city and urban life.

Encyclopedia of Sustainable Technologies London : Routledge

Includes dozens of exciting lesson plans and activities as well as essays examining pedagogical and classroom management issues unique to this age group.

Exploring the Complexities of Human Action Holt McDougal

Making Connections in Elementary and Middle School Social Studies, Second Edition is the best text for teaching primary school teachers how to integrate social studies into other content areas. This book is a comprehensive, reader-friendly text that demonstrates how personal connections can be incorporated into social studies education while meeting the National Council for the Social Studies(tm) thematic, pedagogical, and disciplinary standards. Praised for its eoewealth of strategies that go beyond social studies teaching,e including classroom strategies, pedagogical techniques, activities and lesson plan ideas, this book examines a variety of methods both novice and experienced teachers alike can use to integrate social studies into other content areas.

CyberParks - The Interface Between People, Places and Technology Duke University Press

“A comprehensive, entertaining, and compelling argument for how rebuilding social infrastructure can help heal divisions in our society and move us forward.”—Jon Stewart NAMED ONE OF THE BEST BOOKS OF THE YEAR BY NPR • “Engaging.”—Mayor Pete Buttigieg, *The New York Times* Book Review (Editors’ Choice) We are living in a time of deep divisions. Americans are sorting themselves along racial, religious, and cultural lines, leading to a level of polarization that the country hasn’t seen since the Civil War. Pundits and politicians are calling for us to come together and find common purpose. But how, exactly, can this be done? In *Palaces for the People*, Eric Klinenberg suggests a way forward. He believes that the future of democratic societies rests not simply on shared values but on shared spaces: the libraries, childcare centers, churches, and parks where crucial connections are formed. Interweaving his own research with examples from around the globe, Klinenberg shows how “social infrastructure” is helping to solve some of our most pressing societal challenges. Richly reported and ultimately uplifting, *Palaces for the People* offers a blueprint for bridging our seemingly unbridgeable divides. LONGLISTED FOR THE ANDREW CARNEGIE MEDAL FOR EXCELLENCE IN NONFICTION “Just brilliant!”—Roman Mars, 99% Invisible “The aim of this sweeping work is to popularize the notion of ‘social infrastructure’—the ‘physical places and organizations that shape the way people interact’. . . . Here, drawing on research in urban planning, behavioral economics, and environmental psychology, as well as on his own fieldwork from around the world, [Eric Klinenberg] posits that a community’s resilience correlates strongly with the robustness of its social infrastructure. The numerous case studies add up to a plea for more investment in the spaces and institutions (parks, libraries, childcare centers) that foster mutual support in civic life.”—*The New Yorker* “Palaces for the People—the title is taken from the Scottish-American industrialist and philanthropist Andrew Carnegie’s description of the hundreds of libraries he funded—is essentially a calm, lucid exposition of a centuries-old idea, which is really a furious call to action.”—*New Statesman* “Clear-eyed . . . fascinating.”—*Psychology Today*

international trends with new data, including at subnational scale.

We Change Places, Places Change Us Princeton University Press

Change is the only thing that never changes! We change the places in which we live. The places we live in change us. Let's discover how! This nonfiction book introduces the relationship between people and the places we live. It discusses the impact we have on the earth and the impact the earth has on us. Fun Storybook Features: This children’s book supports NGSS and C3 standards and features a photo glossary, index, and a post-reading activity to develop reading comprehension skills. 24 pages with vibrant photographs Guided reading level I About Rourke Educational Media: We proudly publish respectful and relevant nonfiction and fiction titles that represent our diverse readers, and are designed to support reading on a level that has no limits!

People and Places Springer

From one of the leading policy experts of our time, an urgent rethinking of how we can better support each other to thrive Whether we realize it or not, all of us participate in the social contract every day through mutual obligations among our family, community, place of work, and fellow citizens. Caring for others, paying taxes, and benefiting from public services define the social contract that supports and binds us together as a society. Today, however, our social contract has been broken by changing gender roles, technology, new models of work, aging, and the perils of climate change. Minouche Shafik takes us through stages of life we all experience—raising children, getting educated, falling ill, working, growing old—and shows how a reordering of our societies is possible. Drawing on evidence and examples from around the world, she shows how every country can provide citizens with the basics to have a decent life and be able to contribute to society. But we owe each other more than this. A more generous and inclusive society would also share more risks collectively and ask everyone to contribute for as long as they can so that everyone can fulfill their potential. What We Owe Each Other identifies the key elements of a better social contract that recognizes our interdependencies, supports and invests more in each other, and expects more of individuals in return. Powerful, hopeful, and thought-provoking, *What We Owe Each Other* provides practical solutions to current challenges and demonstrates how we can build a better society—together.

Untamed Urbanisms Springer

This book has three main goals. The first is to celebrate the work of a great public health figure, the late A.J. (Tony) McMichael (1942–2014). The second is to position contemporary public health issues in an interdisciplinary context and in ways that highlight the interdependency between the environment, human institutions and behaviours; a broad approach championed by Tony. The third is to encourage emerging and future public health leaders to advocate for policies and cultural change to sustain and improve human health, from a foundation of objective scholarship. The book’s foreword and 38 chapters were written by people who were inspired by Tony; many of whom worked with him at some point in the last 40 years. Its structure reflects five major public health domains, each of which Tony made major contributions to in an extremely productive academic life: occupational health and safety; environmental and social epidemiology; nutrition and food systems; climate change and health; and ecosystem change and infectious disease. The final section, ‘Transformation’, is dedicated to Tony’s desire for public health scientists to propose adaptive and mitigating solutions to the problems they were observing. Each section contains at least one key publication involving Tony. There is also a selection of artworks from an exhibition which formed part of the conference held to honour Tony at The Australian National University in 2012. This conference formed the first part of Tony’s festschrift, completed by this book.

Texas! Strategies and Practice Reading Grade 7 Island Press

"Exploring the Complexities of Human Action offers a bold theoretical framework for thinking systematically and integratively about what people do as they go about their complex lives in all corners of the world. The book offers a vision of humanity that promotes empathic understanding of complex human beings that can bring people together to pursue common goals. Raeff sets the stage for conceptualizing human action by characterizing what people do in terms of the complexities of holism, dynamics, variability, and multi-causality. She also constructively questions some conventional practices and assumptions in psychology (e.g., fragmenting, objectifying, aggregating, deterministic causality). Raeff then articulates a systems conceptualization of action that emphasizes multiple and interrelated processes. This integrative conceptualization holds that action is constituted by simultaneously occurring and interrelated individual, social, cultural,

bodily, and environmental processes. Action is further conceptualized in terms of simultaneously occurring and interrelated psychological processes (e.g., sensing, perceiving, thinking, feeling, interacting, self/identity), as well as developmental processes. This theoretical framework is informed by research in varied cultures, and accessible examples are used to illustrate major concepts and claims. Raeff also discusses some implications and applications of the theoretical framework for investigating the complexities of human action. The book shows how the theoretical framework can be used to think about a wide range of action, from eating to art. Raeff uses the theoretical framework to consider varied vexing human issues, including mind-body connections, diversity, extremism, and freedom, as well as how action is simultaneously universal, culturally particular, and individualized"--

Change in Tourism Elsevier

For more than forty years Jan Gehl has helped to transform urban environments around the world based on his research into the ways people actually use—or could use—the spaces where they live and work. In this revolutionary book, Gehl presents his latest work creating (or recreating) cityscapes on a human scale. He clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be: cities for people. Taking into account changing demographics and changing lifestyles, Gehl emphasizes four human issues that he sees as essential to successful city planning. He explains how to develop cities that are

Lively, Safe, Sustainable, and Healthy. Focusing on these issues leads Gehl to think of even the largest city on a very small scale. For Gehl, the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train. This small-scale view, he argues, is too frequently neglected in contemporary projects. In a final chapter, Gehl makes a plea for city planning on a human scale in the fast-growing cities of developing countries. A "Toolbox," presenting key principles, overviews of methods, and keyword lists, concludes the book. The book is extensively illustrated with over 700 photos and drawings of examples from Gehl's work around the globe.

From the Folks Who Brought You the Weekend OECD Publishing

Understanding where ageing occurs, how it is experienced by different people in different places, and in what ways it is transforming our communities, economies and societies at all levels has become crucial for the development of informed research, policy and programmes. This book focuses on the interdisciplinary field of study - geographical gerontology - that addresses these issues. With contributions from more than 30 leading geographers and gerontologists, the book examines the scope and depth of geographical perspectives, concepts and approaches applied to the study of ageing, old age and older populations. The book features 25 chapters organized into five parts that cover the field's theoretical traditions and intellectual evolution; the contributions of key disciplinary perspectives from population geography, social and cultural geography, health geography, urban planning and environmental studies; the scales of inquiry within geographical

gerontology from the global to the embodied; the thematic breadth of contemporary issues of interest that define the field (places, spaces and landscapes of ageing); and a discussion about challenges, opportunities and agendas for future developments in geography and gerontology. This book provides the first comprehensive foundation of knowledge about the state of the art of geographical gerontology that will be of interest to scholars of ageing around the world.

Geographical Gerontology Crown

Vera Köpsel investigates the relevance of local perceptions of landscape and nature for the current topic of adaptation to climate change. She highlights the influence that differing conceptualisations of landscape among actors in environmental management have on their perspectives on climate change and adaptation. Qualitative empirical data from Cornwall (UK) constitutes a valuable foundation for an enhanced theoretical understanding of societal constructions of landscape and their implications for local negotiation processes. Using the example of coastal erosion, the author discusses how contrasting perceptions of a local landscape can significantly complicate consensus-finding around physical-material adaptation measures.

Local Economic and Employment Development (LEED) The Culture Fix Creative People, Places and Industries Carson-Dellosa Publishing

Combines geography, history, culture and anthropology to make social studies an enjoyable subject.
