N-heterocyclic carbenes (NHCs) have found increasing use as reagents for a range of organic transformations and in asymmetric organocatalysis. The performance of these molecules can be improved and tuned by functionalisation. Functionalised carbenes can anchor free carbenes to the metal site, introduce hemilability, provide a means to immobilise transition metal carbene catalysts, introduce chirality, provide a chelate ligand or bridge two metal centres. NHC can be attached to carbohydrates and campher, derived from amino acids and purines, they can be used as organocatalysts mimicking vitamin B1 or as weak "solvent" donors in lanthanide chemistry. Functionalised N-Heterocyclic Carbene Complexes describes major trends in functionalised NHC ligands, aiming to assist readers in their attempts to develop and apply their own functionalised carbenes. After an introduction to the chemistry and behaviour of NHC, the book gives a detailed description of functionalised carbenes and their complexes according to a range of functional groups, each with a discussion of the synthetic route, structure, stability and performance. Functionalised N-Heterocyclic Carbene Complexes is an essential guide to fine-tuning this important class of compounds for practitioners, researchers and advanced students working in synthetic organometallic and organic chemistry and catalysis.

Climatological Data Princeton University Press

From the Ishango Bone of central Africa and the Inca quipu of South America to the dawn of modern mathematics, *The Crest of the Peacock* makes it clear that human beings everywhere have been capable of advanced and innovative mathematical thinking. George Gheverghese Joseph takes us on a breathtaking multicultural tour of the roots and shoots of non-European mathematics. He shows us the deep influence that the Egyptians and Babylonians had on the Greeks, the Arabs' major creative contributions, and the astounding range of successes of the great civilizations of India and China. The third edition emphasizes the dialogue between civilizations, and further explores how mathematical ideas were transmitted from East to West. The book's scope is now even wider, incorporating recent findings on the history of mathematics in China, India, and early Islamic civilizations as well as Egypt and Mesopotamia. With more detailed coverage of proto-mathematics and the origins of trigonometry and infinity in the East, *The Crest of the Peacock* further illuminates the global history of mathematics.

This collective volume explores clause-linkage strategies in a cross-linguistic perspective with greater emphasis on subordination. Part I presents some theoretical reassessment of syntactic terminologies and distinctive criteria for subordination, as well as typological methods based on sets of variables and statistics allowing cross-linguistic comparability. Part II deals with strategies relating to clause-chaining, conjunctive conjugations, converbial constructions, masdars. Part III centers on the interaction between the syntax, pragmatics, and semantics of clause-linking and subordination, in relation to information structure, to referential hierarchy, and correlative constructions. Part IV presents insights in the clause-linking and subordinating functions of some T.A.M. markers, verbal inflectional morphology and conjugation systems, which may also interact with information hierarchy, via the backgrounding effects and lack of illocutionary force of some aspect and mood

forms. The volume is of particular interest to linguists and typologists working on clause-linkage systems and on the interface between syntax, pragmatics, and semantics.

Clause Linking and Clause Hierarchy Sociedad Argentina de Hematologia

A Book of the Month Club's Crafter's Choice! Cross-stitch is a traditional hobby — but your designs don't have to be! These more than 130 patterns reflect a modern sensibility, with motifs ranging from trendy to vintage to kitschy, so there's something here for everyone. All are designed to fit into a 6-inch or smaller embroidery hoop, making them quick projects that can be finished in an evening or weekend. If you're feeling ambitious, the small designs can be assembled to form a larger piece. Patterns are organized according to theme: animals; designs, including flowers and snowflakes; home and hearth, consisting of more than 40 patterns that range from a patchwork heart and an antique sewing machine to teapots, a watering can, and variations on "home sweet home"; nature; and charming patterns for special occasions. A brief introductory section offers advice on getting started, tools and supplies, and stitching. "A treat! Cross-stitchers will love this book." — Christian Fiction and More

The mathematical questions, proposed in the Ladies' diary, and their original answers, together with some new solutions, from 1704 to 1816, by T. Leybourn John Benjamins Publishing

This book covers only a part of the wide and diverse field of the Smarandache Notions, and contains some of the materials that I gathered as I wandered in the world of Smarandache. Most of the materials are already published in different journals, but some materials are new and appear for the first time in this book. All the results are provided with proofs. Chapter 1 gives eleven recursive type Smarandache sequences, namely, the SmarandacheOdd, Even, Prime Product, Square Product (of two types), Higher Power Product (of two types), Permutation, Circular, Reverse, Symmetric and Pierced Chain sequences. Chapter 2 deals with the Smarandache Cyclic Arithmetic Determinant and Bisymmetric Arithmetic Determinant sequences, and series involving the terms of the Smarandachebisymmetric determinant natural and bisymmetric arithmetic determinant sequences. Chapter 3 treats the Smarandache function $S(n)$. Chapter 4 considers, in rather more detail, the pseudo Smarandache function $Z(n)$. And the Smarandache S-related and Z-related triangles are the subject matter of Chapter 5. To make the book self-contained, some well-known results of the classical Number Theory are given in Chapter 0. In order to make the book up-to-date, the major results of other researchers are also included in the book. At the end of each chapter, several open problems are given.

The theoretical proposals brought forward in this book as well as the results from the reported experimental studies present genuine contributions to the biolinguistic program. The papers contribute to our understanding of the properties of the computations and the representations derived by the language faculty, viewed as an organism of human biological. Towards a Biolinguistic Understanding of Grammar: Essays on Interfaces adds to the usual notion of interfaces, which is generally understood as the connection between syntax and the semantic system, between phonology and the sensorimotor system. It raises novel interface questions about how these connections are at all possible within the biolinguistic program. It anchors the formal properties of grammar at the interfaces between language and biology, language and experience, bringing about language acquisition and language variation, and it also explores the interaction of grammar with the factors reducing complexity. This book aims to bring about further understanding of the interfaces of the grammar in a broader biolinguistic sense. Written in a language accessible to a wide audience, this book will appeal to scholars and students of linguistics, cognitive science, biology, and natural language processing.
