The COVID-19 pandemic has forced companies, institutions, citizens, and students to rapidly change their behaviors and use virtual technologies to perform their usual working tasks. Though virtual technologies for learning were already present in most universities, the pandemic has forced virtual technologies to lead the way in order to continue teaching and learning for students and faculty around the world. Universities and teachers had to quickly adjust everything from their curriculum to their teaching styles in order to adapt to an online learning environment. Online learning is a complex issue and one that comes with both challenges and opportunities; there is plenty of room for growth, and further study is required to better understand how to improve online education. The Handbook of Research on Developing a Post-Pandemic Paradigm for Virtual Technologies in Higher Education is a comprehensive reference book that presents the testimonials of teachers and students with various degrees of experience with distance learning and their utilization of current virtual tools and applications for learning, as well as the impact of these technologies and

their potential future use. With topics ranging from designing an online learning course to discussing group work in an online environment, this book is ideal for teachers, educational software developers, IT consultants, instructional designers, administrators, professors, researchers, lecturers, students, and all those who are interested in learning more about distance learning and all the positive and negative aspects that accompany it.

This essential guide should be on the desk of any library and information professional, records manager, archivist or knowledge manager involved in

planning and introducing an ERM system, whether in a public or private sector organization. Information professionals currently face the challenge of providing end-user education and staff training to very large and diverse groups, whilst integrating the use of ICT into their teaching. But there seems to be a tendency within the literature to focus solely on face-to-face learning or on e-learning, and this is a lost opportunity. This book offers a new blended learning approach, combining the two techniques to make best use of the advantages of each while minimizing the disadvantages. It provides information professionals with a practical guide to the design and delivery of such training programmes, illustrated with a range of library-based examples, checklists and case studies. Many organizations establish projects, sometimes using external funding, as a means of developing their education and training provision, and the book provides a practical overview of this subject in the context of blended learning. Key areas covered include: technologies in the classroom virtual communication tools integrated learning environments websites and web tools models of teaching and learning planning and designing learning activities individual and group learning coaching and mentoring engaging with communities of interest and practice managing learning and teaching projects. Readership: This unique book will be of great value to any information professionals involved in establishing and delivering end-user education and staff development, whatever their previous experience. It will also benefit staff developers in school, college and higher education, library and information students, independent consultants and trainers,

and information suppliers such as database providers.

Comprehensive Dissertation Index, 1861-1972: Education Peterson Nelnet Company

This is Gene Maeroff's "report from the front" on the short history and status of online learning in the United States and around the world. Maeroff is a reporter who takes you to the schools from Penn State's World Campus to the Florida Virtual School to the newly emerging online learning initiatives in Afghanistan. His journey ultimately provides a snapshot of the way in which technology is changing the minds of people with regard to the nature of higher education. He looks at the method of electronic delivery, the quality of the information being delivered and quality of interaction it engenders. He looks at the way learners are adapting to this new technology and how much responsibility is put on the student's shoulders. Finally, and maybe tellingly, he looks at the business of online learning.
