Both banks and
insurance companies
are financial
intermediaries.

However, their
functions are different.
An insurance company
ensures its customers
against certain risks,
such as the risk of
having a car accident
or the risk that a house
catches on fire. In
return for this
insurance, their
customers pay them
regular insurance
premiums. Banks

accept short-term deposits and make long-term loans. This means that there is a mismatch between their liabilities and their assets. In case a large number of their depositors want their money back, for example in a bank run scenario, they might have to come up with the money in a hurry. For an insurance company, however, its liabilities are based on certain insured events happening. Their customers can get a pay-out if the event they are insured against, such as their house burning down, does happen. They don't have a claim on the insurance company otherwise. The purpose of this study Material is to present an introduction to the subjects of Principles &

Practices of Banking and Insurance. The book contains the syllabus from basics of the subjects going into the intricacies of the subjects. All the concepts have been explained with relevant examples and diagrams to make it interesting for the readers. An attempt is made here by the author to help the students by way of providing Study Material as per the curriculum with non-commercial considerations. However, it is implicit that these are exam-oriented Study Material and students are advised to attend regular class room classes in the Institute and utilize reference books available in the library for In-depth knowledge. Mining Environmental Handbook: Effects Of Mining On The Environment And American Environmental Controls On Mining Kluwer Law International B.V. Familiarity with guarantees and how they function under various national jurisdictions are essential for principals, guarantors, and beneficiaries of international contracts. This enormously useful handbook provides a practical overview of the guarantee regimes in twenty-eight European countries, with country-by-country contributions from regional expert practitioners and academics. Focusing on specific issues to consider at every stage, each chapter provides detailed information and guidance on such aspects as the following: . who can issue guarantees; . limitations as to the type of obligations which may be subject to a guarantee; . issues relating to the protection of the contracting parties; . formal requirements which need to be complied with; . stamp duties or other tax payable; . presence of implied terms; . legal framework applicable to joint and several obligations; . modification of the situation; . conditions

for release and actions to be taken to ensure a valid release; . opening of bankruptcy proceedings against the principal; . court enforcement; and . incorporation of uniform rules. Each chapter includes references and model guarantee forms that readers can use to draft their own documents. Invaluable to corporate counsel and law firms with an international practice, this peerless handbook will prove the first order of business in trade negotiations across Europe, among European nations themselves as well as with their global partners.

1. 1 Investments, Generic Contracts, Payments According to Volume I, contracts are one of the five generic legal tools used to manage cash flow, risk, agency relationships, and information. Many investments are

therefore based on one or more contracts. Obviously, the firm should draft good contracts. Good drafting can ensure the same intended cash flow with reduced risk. Bad drafting can increase risk. This volume attempts to deconstruct contracts used by non-financial firms and analyse them from a cash flow, risk, agency, and information perspective. The starting point is a generic contract, i. e. a contract which does not belong to any particular contract type (Chapters 2-7). This volume will also focus on payment obligations. Payment obligations are characteristic of all financial instruments, and they can range from simple payment

obligations in minor sales contracts and traditional lending contracts (Chapters 8-11). 1. 2 Particular Contract Types A number of particular contract types have been discussed in the other volumes of this book. (1) A certain party's investment contract can be another party's funding contract. Particular investment contracts will therefore be discussed in Volume III in the context of funding. (2) Many contracts are necessary in the context of business acquisitions discussed in Volume III. (3) Multi-party contracts are common in corporate finance. The firm's contracts with two or more parties range from syndicated loans to central

counterparties' contracts. Such contracts will be discussed both in Chapter 12 and Volume III.

Standby Letters of Credit in International Trade
Academic Press

This book is the first to provide an extensive analysis of the range of defences to payment under letters of credit and demand guarantees. It considers the extent to which different defences undermine the abstraction of these instruments. This is a fundamental issue, since letters of credit

and demand guarantees are designed to be abstract, or autonomous, from the underlying contract that called for their use. The purpose of that abstraction is to provide certainty of payment, but the various defences diminish that certainty. The book examines the spectrum of defences that are frequently litigated and debated in international practice: fraud in the documents, nullity, fraud affecting deferred payment letters of credit, fraud as no honest belief, unconscionable conduct and illegality. Vitaly, the book provides analysis of the relevant judicial decisions and offers clear practical guidance on which

defences are most suitable for each instrument. As the instruments are heavily used in international trade, this work is particularly suited to financial and commercial law practitioners who draft agreements, as well as those who advise on disputes concerning these instruments.

Accessible and engaging, the book is also relevant for academics and students.

Title 40 Protection of Environment Parts 260 to 265 (Revised as of July 1, 2013) American Bar Association

This thesis puts forward two principal arguments. First, it argues that commercial letters of credit and standby letters of credit should not be treated on an

equal footing. They are, and should be, treated as two separate undertakings with respect to the application of the fraud exception. Secondly, the thesis argues that there should be a 'wider' fraud exception for standby letters of credit; however, the need is to explore how wide that fraud exception should be. To support the arguments of this thesis, the study examines the application of the fraud exception in four major jurisdictions: the US, England, Canada and Australia. Out of these four jurisdictions, two - the US and Canada - have been expressly applying the wider fraud test to standby letters of credit and the other two have traditionally applied

the more stringent fraud test to standby credits. The research will compare and critically examine these four jurisdictions' approaches to their different tests of the fraud rule to standby letters of credit, and argue that the fraud rule for standby letters of credit should neither be too narrow ('fraud in documents') nor should it be too wide (fraud in the inducement or unconscionable conduct or bad faith). It is argued that standby letters of credit are more abstract than commercial letters of credit; therefore, protecting the principle of the autonomy of these independent undertakings is of paramount importance. The study argues that even the wider fraud exception (the 'fraud in

the transaction' defence) should be given a narrow meaning: in order to protect the independence of standby credits, it should be confined to cases in which the beneficiary had 'no bona fide belief in the validity of its claim. The thesis clearly shows that the wider 'fraud as no bona fide claim' is an appropriate fraud defence for standby letters of credit whereas for commercial letters of credit the fraud exception should be narrowly confined to 'fraud in documents', which is arguably an appropriate test for these undertakings. *Credit Guarantees* Food & Agriculture Org. Emerging Market Bank Lending and Credit

Risk Control Wolters

Kluwer Law & Business

The problem of collateral is a daily issue for lenders and causes much debate in the development finance community.

Given the difficulties experienced in arranging traditional forms of loan security, such as land or chattel mortgages, various collateral substitutes have been proposed.

Among the substitutes for traditional collateral is the loan guarantee.

Guarantee systems for loans have been proposed, planned and implemented in various countries. The assumption made by

proponents of such a service is that the guarantee organization is either better informed about the risk of the loan than the lender or it is better structured financially to be able to manage the risk. Despite the apparent attractiveness of a loan guarantee, the empirical evidence available gives little encouragement. Nevertheless, interest in guarantees continues.

 Negative environmental events make the headlines. Mining industry examples are the recent incidents at Summitville, Colorado, US, and the cyanide leak at Cambria Resource's Omai Operation in Guyana. In this volatile atmosphere, the publication of the Mining Environmental Handbook comes at an opportune time. It presents an objective, comprehensive and integrated examination of the effects of mining on the environment, and the environmental laws that deal with mining. Though stressing activities in the United States of America, it covers all of

North America. North American environmental standards are currently being exported around the world. Consequently, this handbook will be of prime interest in countries that are now coming to terms with mining environmentalism. It should benefit working engineers and environmentalists, manufacturers, legislators, regulators, financiers and journalists. It has been selected as a university textbook. Finally, it will be an indispensable reference during serious discussions about mining environmentalism. *Guarantee of Dividends to Corporations in Porto Rico.
