Passing to América Penn State Press

What is economics' missing link? Recent economic crises have had a devastating impact on society. Worryingly, they gravely risked a collapse of the financial system. These crises also painfully revealed economics' blind spots. Crucially, economics is not an innocent bystander but central to the problem. In this pioneering book, Patrick Schotanus explains that economics'

mechanical worldview is the ontological error which leads to flawed thinking and faulty practices. The Market Mind Hypothesis (MMH) thus calls it "mechanical economics": it not only erroneously views but also dangerously treats the economy as a machine, the market as an automaton, and its agents as robots. Inspired by heterodox economic and leading cognitive thinkers, this book offers an alternative paradigm. Central to MMH's psychophysical worldview is the fact that consumers, investors, and other participants are conscious beings and that their minds' extension makes consciousness a reality in markets, exemplified by market mood. Specifically, denial of the complex mind~matter

exchanges as the essence of markets means the extended mind~body problem is economics' elephant in the room. The book argues that if mechanical economics is the answer, we have been asking the wrong questions. Moreover, we will not solve our economic predicaments by doubling down on the assumption of rationality, nor by identifying yet another behavioural bias. Instead, scholars and students of economics and finance as well as finance practitioners need to investigate—through cognitive economics—the deep links between markets and minds to better understand both.

Drawn from more than sixty years of classroom experience, this introductory guide provides students with a coherent framework for considering psychology from a Christian perspective. Paul Moes and Donald Tellinghuisen explore biblical themes of human nature in relation to all major areas of psychology, showing how a Christian understanding of humans can inform the study of psychology. The first edition has proven to be a successful textbook, with over 11,000 copies sold. The second edition has been updated and revised throughout based on student and instructor feedback. Brief, accessible chapters correspond to standard introductory psychology textbooks, making this an excellent supplemental text. The book includes end-of-chapter questions. An updated test bank for professors is available through Textbook eSources.

Although often used in everyday speech and in the scholarly literature, “selective attention” and “consciousness” lack clear, undisputed definitions. Partly because of this deficit there exists a

lively debate on the relationship between the two. Nevertheless, attention has been studied scientifically for a long time, because a variety of tasks allow researchers to control several of its aspects (e.g. focused and feature-based attention). Consciousness as a scientific subject of study has emerged more recently, but is now rapidly gaining traction. Scientific studies of consciousness concern the state or level of consciousness (e.g., awake as opposed to in coma, dreamless sleep or under anaesthesia) as well as the contents of consciousness or the phenomenology of perception. With the increase in consciousness-focused research, there is a concomitant surge in research examining the relationship between attention and consciousness. This relationship between attention and consciousness is the topic of this Research Topic. Contributions related to or focused solely on attention or on consciousness will not be considered. It had long been assumed that attention and consciousness are inextricably intertwined: two sides of the same coin. However, recently substantial evidence has emerged that attention and consciousness are interacting, but separable processes. It is however debated how tight the interactions are, and what the exact nature of the relationship is. Therefore, we invite researchers from different “camps” to provide opinionated but balanced literature reviews. Different groups will interpret the same data in different ways. We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields. Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views. Even though attention and consciousness are critical aspects of

many different cognitive processes, they are mainly studied (though not exclusively) in the domain of visual perception. In other sensory modalities, e.g. olfaction or audition, it is currently not clear whether distinctions between attention and consciousness exist, which is even more true for other cognitive processes such as memory. Therefore, we specifically invite contributions covering the auditory, somatosensory, olfactory, and memory domain. We ask all contributors to provide discussions on the relationship between attention and consciousness, and focus on (1) the influence of attention on sensory processing; (2) the formation of conscious perception, (3) the evidence for unconscious processing and its modulation by attention; (4) potential indications for dissociations between attention and consciousness (e.g. does paying attention to a stimulus decrease performance on e.g. a discrimination task?); (5) neuroimaging and neurophysiology data pertaining to these questions. Often, one is caught in one's own research field and lacks the time or the knowledge to delve into another field. This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness, and their interactions, in several different sensory modalities.

Among the numerous lives of the Buddha, this volume may well claim a place of its own. Composed entirely from texts of the Pali Canon, the oldest authentic record, it portrays an image of the Buddha which is vivid, warm, and moving. Chapters on the Buddha's personality and doctrine are especially illuminating, and the translation is marked by lucidity and dignity throughout.

This book is a collaboration of some of the best thinkers in the Gestalt therapy world and offers a high-level summary of recent and future developments in theory, practice and research.

Knowing and Seeing Oxford University Press

In 1803 in the colonial South American city of La Plata, Doña Martina Vilvado y Balverde presented herself to church and crown officials to denounce her husband of more than four years, Don Antonio Yta, as a "woman in disguise." Forced to submit to a medical inspection that revealed a woman's body, Don Antonio confessed to having been María Yta, but continued to assert his maleness and claimed to have a functional "member" that appeared, he said, when necessary. Passing to América is at once a historical biography and an in-depth examination of the sex/gender complex in an era before "gender" had been divorced from "sex." The book presents readers with the original court docket, including Don Antonio's extended confession, in which he tells his life story, and the equally extraordinary biographical sketch offered by Felipa Ybañez of her "son María," both in English translation and the original Spanish. Thomas A. Abercrombie's analysis not only grapples with how to understand

the sex/gender system within the Spanish Atlantic empire at the turn of the nineteenth century but also explores what Antonio/María and contemporaries can teach us about the complexities of the relationship between sex and gender today. Passing to América brings to light a previously obscure case of gender transgression and puts Don Antonio's life into its social and historical context in order to explore the meaning of "trans" identity in Spain and its American colonies. This accessible and intriguing study provides new insight into historical and contemporary gender construction that will interest students and scholars of gender studies and colonial Spanish literature and history. This book is freely available in an open access edition thanks to TOME (Toward an Open Monograph Ecosystem)—a collaboration of the Association of American Universities, the Association of University Presses and the Association of Research Libraries—and the generous support of New York University. This volume critically discusses the role empathy plays in different processes of understanding. More precisely, it clarifies empathy's role in interpersonal understanding and appreciating works of literature and art. The volume also includes a section on historical theories of empathy's role in understanding. When it comes to understanding other persons, empathy is typically seen as a process that enables the empathizer to recognize a target person's mental states, a process which is in turn seen as "understanding" this person. This volume, however, explores empathy's role in understanding beyond mere mental state recognition. With contributions on processes of interpersonal

understanding and understanding of literature and art, it provides readers with an overview over both differences and similarities regarding empathy's epistemic role in two rather different areas. Since important roots of the debate about empathic understanding lie at the end of the nineteenth and the beginning of the twentieth century, the historical section of the volume focusses specifically on this period. *Empathy's Role in Understanding Persons, Literature, and Art* will appeal to scholars and advanced students working in the philosophy of mind, epistemology, aesthetics and the history of philosophy, as well as in literary studies and art history.

This book probes into under-researched issues in L2 pragmatics. Firstly, pragmatic competence, pragmatic awareness and metapragmatic awareness are re-defined and clearly distinguished on theoretical grounds. Secondly, pragmatic competence and its manifestations are evaluated on empirical grounds by distinct criteria and validated testing measures. More importantly, genuine pragmatic inference is elicited in contexts of online interpretation where figurative speech plays a central role. Genre-specific discourse which occurs in editorials and news reports serves as a natural testbed for examining the role of advanced mind-reading abilities in developing pragmatic competence. Sperber and Wilson's relevance theory accommodates the findings of empirical assessment and yields new insights in the cognitive procedures activated during interpretation. The comprehensive theoretical and methodological treatment of pragmatic competence makes this book of interest to researchers and students in pragmatics, L2

theory and applications, genre studies, and to those concerned with the cognitive underpinnings of communication in L2.

Most people are both repelled and intrigued by the images of cold-blooded, conscienceless murderers that increasingly populate our movies, television programs, and newspaper headlines. With their flagrant criminal violation of society's rules, serial killers like Ted Bundy and John Wayne Gacy are among the most dramatic examples of the psychopath. Individuals with this personality disorder are fully aware of the consequences of their actions and know the difference between right and wrong, yet they are terrifyingly self-centered, remorseless, and unable to care about the feelings of others. Perhaps most frightening, they often seem completely normal to unsuspecting targets--and they do not always ply their trade by killing. Presenting a compelling portrait of these dangerous men and women based on 25 years of distinguished scientific research, Dr. Robert D. Hare vividly describes a world of con artists, hustlers, rapists, and other predators who charm, lie, and manipulate their way through life. Are psychopaths mad, or simply bad? How can they be recognized? And how can we protect ourselves? This book provides solid information and surprising insights for anyone seeking to understand this devastating condition.

A Refreshing and Rethinking Retrieval of Greek Thinking presents a rereading and rethinking of Greek philosophy in an attempt to retrieve an essential thread in Greek thinking that has been covered over for many centuries - beginning with the late

Greeks, then Christianity, and then rationalism - and misrepresented by mistranslations from the seventeenth century onward . Using Heidegger's work with Greek thinking as a springboard, the book shows how the covering over of this essential thread happened. Kenneth Maly provides a frame by which those not trained in philosophy and phenomenology of experience can grasp the wider import of this rethinking of Greek philosophy. The book delves deep into key questions, preparing readers for extensive and more technical work with the key Greek words and their meanings, hidden for centuries. It includes a significant investigation of how this task requires a different way of language, how early Western thinking mirrors non-Western Daoism and Buddhism, and how quantum physics gets to the same place in its "philosophy," with an emphasis on the work of David Bohm. In doing so, the book reveals how Daoism, Buddhism, the quantum potential of quantum physics, and Heidegger's being-beyng are all mirrored in Greek philosophy, above all in early Greek thinking.

This book illustrates the developments of task-based language teaching (TBLT) approaches in relation to the evolution of digital technologies. It highlights how technology-mediated TBLT principles can support English as a Foreign Language (EFL) learning and contribute to understanding new classroom dynamics. Drawing from the key theoretical concepts of TBLT, the author discusses the integration of tasks and technologies from a secondary education perspective, which is often under-represented in the TBLT literature. Morgana looks at how the EFL secondary classroom has been recently re-conceptualised as a

social place whose boundaries go far behind the traditional school settings. This book provides theoretical approaches and classroom implementation practices by presenting four case studies on the different L2 skills (reading, writing, listening and speaking). The volume is organised into two main sections. The first section focuses on the theoretical approaches to TBLT and highlights the key concepts behind this methodology. This section also looks at the recent development of a technology-mediated TBLT framework and its implementations in various EFL educational contexts. The second section presents four case studies of secondary-school EFL learners in Italy. Each case study focuses on a different language skill, providing examples of classroom practices in both blended and online learning settings. Pedagogical recommendations for teachers are provided at the end of each case study. The book adopts a multimodal approach and aims at providing scholars in applied linguistics and TBLT practitioners with theories and implementation practices to understand the ways technologies are shaping tasks and mediating students' learning processes.

**Affect Imagery Consciousness** Walter de Gruyter  
Surveying the state of American ballet in a 1913 issue of McClure's Magazine, author Willa Cather reported that few girls expressed any interest in taking ballet class and that those who did were hard-pressed to find anything other than dingy studios and imperious teachers. One hundred years later, ballet is everywhere. There are ballet companies large and small across the United States; ballet is commonly featured in film, television, literature, and on social media; professional ballet dancers are spokespeople for all kinds of products; nail polish companies

market colors like "Ballet Slippers" and "Prima Ballerina;" and, most importantly, millions of American children have taken ballet class. Beginning with the arrival of Russian dancers like Anna Pavlova, who first toured the United States on the eve of World War I, Ballet Class: An American History explores the growth of ballet from an ancillary part of nineteenth-century musical theater, opera, and vaudeville to the quintessential extracurricular activity it is today, pursued by countless children nationwide and an integral part of twentieth-century American childhood across borders of gender, class, race, and sexuality. A social history, Ballet Class takes a new approach to the very popular subject of ballet and helps ground an art form often perceived to be elite in the experiences of regular, everyday people who spent time in barre-lined studios across the United States. Drawing on a wide variety of materials, including children's books, memoirs by professional dancers and choreographers, pedagogy manuals, and dance periodicals, in addition to archival collections and oral histories, this pathbreaking study provides a deeply-researched national perspective on the history and significance of recreational ballet class in the United States and its influence on many facets of children's lives, including gender norms, consumerism, body image, children's literature, extracurricular activities, and popular culture.

This edited volume represents state of the field research linking cognition and second language acquisition, reflecting the experience of the learner when engaged in noticing, input/output

processing, retrieval, and even attrition of target forms. Contributions are both theoretical and practical, describing a variety of L1, L2 and L3 combinations from around the world as observed in spoken, written, and computer-mediated contexts. The book relates conditions of language, task, medium or environment to how learners make decisions about language, with discussions about the application or efficacy of these conditions on linguistic success and development, and pedagogical implications.

Encountering Ensemble, is a text for students, teachers, researchers and practitioners who wish to develop a deeper understanding of the history, conceptual foundations and practicalities of the world of ensemble theatre. It is the first book to draw together definitions and practitioner examples, making it a cutting edge work on the subject. Encountering Ensemble combines historical and contemporary case studies with a wide range of approaches and perspectives. It is written collaboratively with practitioners and members from the academic community and is divided into three sections: 1. Introduction and an approach to training ensembles 2. Practitioner case studies and analysis of specific practical approaches to training ensembles (or individuals in an ensemble context) 3. Succinct perspectives from practitioners reflecting on a range of questions including: What is an ensemble?; the place of ensemble in the contemporary theatre landscape; and training issues.

Drawing on Australian and international research, this book presents teaching and support strategies for educators to be responsive to the particular learning needs of each of their students and deliver quality inclusive education in a sustainable way. Based on the Responsive Teaching Framework, an instructionally-focused approach for teaching that is evidence-based, purposeful, and responsive to students' learning needs, this book assists teachers to build on their current capabilities and strengthen their expertise to ensure that every student in their classrooms can be an effective learner. Part I of the book explains the theoretical and practical basis of Sustainable Learning as a way of thinking about inclusive education through a focus on responsive teaching. Part II unpacks each of the eight steps of the Responsive Teaching Framework. These chapters focus on the reflective questions that guide responsive practice, from whole class and individual student perspectives, outlining practical strategies that can be used, as well as the assessment practices and evidence-gathering needed to support each step of the responsive teaching process. Part III examines the influences that school leaders have on inclusive practice and proposes a Responsive Leadership Framework (RLF). The RLF aligns with the Responsive Teaching Framework to provide a shared language and deepen understanding of Responsive Teaching for Sustainable Learning. Written for practising educators, school leaders, and postgraduate students, Responsive Teaching for Sustainable Learning delivers models for inclusive, sustainable teaching practice in an easily accessible format.

This timely book reports recent progress in research on traumatic brain injury (TBI) by leading investigators encompassing translational and clinical studies. The text covers epidemiology, pathophysiology, brain imaging, cognition, behavioral sequelae, and clinical trials of innovative treatments, including new approaches to rehabilitation. The range of TBI mechanisms represented in this cutting-edge book includes closed head trauma and blast-related injury, and the spectrum of TBI severity. Chapters offer a developmental perspective, including the effects of TBI on cognitive development in children and outcome studies in adults. Contributors from various countries provide a global perspective on this worldwide health problem. The editors have synthesized the contents in a concluding chapter. Researchers and clinicians will find this volume to be an informative, authoritative reference for current TBI research.

Annotation Information Ethics: Privacy and Intellectual Property provides an up-to-date discussion of the main ethical issues that face today's information-intensive society, including the areas of

intellectual property rights, privacy, accessibility and censorship. The explosive growth of information technology, increased competition in the global marketplace, and the rush to use information in an effort to protect society from terrorism has led to the unintended erosion of rights and duties that are often considered fundamental. This book provides the reader with a thorough overview of the current state of information ethics, the dangers and opportunities presented by information technology, and potential solutions to the risks currently faced by today's information society.
