Flightpath is the definitive course for pilots and Air Traffic Controllers who need an ICAO4 level of English to work in the industry. Written by Philip Shawcross, one of the world's leading Aviation English experts, and reviewed by a panel of aviation English specialists,

this course offers a thorough grounding in the range of communication skills needed by both pilots and Air Traffic Control Officers (ATCOs) aiming to reach ICAO4 level or above. The Teacher's Book is a complete manual and subject matter reference book for Aviation English teachers of any level of experience, with detailed notes and instructions for each unit. The teacher's notes provide further support and will help the trainer customise the course for pilots, ATCOs and mixed classes.

Infotech is a comprehensive course for learners at the intermediate level who need to be able to understand and use the English of computing for study or work. The course develops all four skills - listening, reading, speaking and writing - through a wide range of activities which present the key language and allow the learner to practice the most important vocabulary and structures in a meaningful and student-centred way. Each of the 28 topic-based units covers a different aspect of information technology, from Operating systems to Input/Output devices for the disabled. The units contain a wealth of authentic texts which are up-to-date in their content. The cassette contains situational dialogues and presentations

of computer technology to develop listening comprehension skills and build vocabulary.

CD-ROM. Cambridge University Press Computers, communications, digital information, software—the constituents of the information age—are everywhere. Being computer literate, that is technically competent in two or three of today’s software applications, is not enough anymore. Individuals who want to realize the potential value of information technology (IT) in their everyday lives need to be computer fluent—able to use IT effectively today and to adapt to changes tomorrow. Being Fluent with Information Technology sets the standard for what everyone should know

about IT in order to use it effectively now and in the future. It explores three kinds of knowledge—intellectual capabilities, foundational concepts, and skills—that are essential for fluency with IT. The book presents detailed descriptions and examples of current skills and timeless concepts and capabilities, which will be useful to individuals who use IT and to the instructors who teach them.

Software Engineering: A Programming Approach provides a unique introduction to software engineering for all students of computer science and its related disciplines. It is also ideal for practitioners in the software industry who wish to keep track of new developments in the discipline. The third

edition is an update of the original text written by Bell, Morrey and Pugh and further develops the programming approach taken by these authors. The new edition however, being updated by a single author, presents a more coherent and fully integrated text. It also includes recent developments in the field and new chapters include those on: formal development, software management, prototyping, process models and user interface design. The programming approach emphasized in this text builds on the reader's understanding of small-scale programming and extends this knowledge into the realm of large-scale software engineering. This helps the student to understand the current challenges of software engineering as

well as developing an understanding of the broad range of techniques and tools that are currently available in the industry. Particular features of the third edition are: - a pragmatic, non-mathematical approach - an overview of the software development process is included - self-test questions in each chapter ensure understanding of the topic - extensive exercises are provided at the end of each chapter - an accompanying website extends and updates material in the book - use of Java throughout as an illustrative programming language - consistent use of UML as a design notation Douglas Bell is a lecturer at Sheffield Hallam University, England. He has authored and co-authored a number of texts including, most recently, Java for Students.
