This book reports the state of the art of energy-efficient electrical motor driven system technologies, which can be used now and in the near future to achieve significant and cost-effective energy savings. It includes the recent developments in advanced electrical motor end-use devices (pumps, fans and compressors) by some of the largest manufacturers. Policies and programs to promote the large scale penetration of energy-efficient technologies and the market transformation are featured in the book, describing the experiences carried out in different parts of the world. This extensive

coverage includes contributions from relevant institutions in the Europe, North America, Latin America, Africa, Asia, Australia and New Zealand.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book

argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Wildlife management is about finding the balance between

conservation of endangered species and mitigating the impacts of overabundant wildlife on humans and the environment. This book deals with the monitoring of fauna, related diseases, and interactions with humans. It is intended to assist and support the professional worker in wildlife management.

The EN ISO 13849-1 standard, "Safety of machinery - Safety-related parts of control systems", contains provisions governing the design of such parts. This report is an update of BGIA Report 2/2008e of the same name. It describes the

essential subject-matter of the standard in its third, revised 2015 edition, and explains its application with reference to numerous examples from the fields of electromechanics, fluidics, electronics and programmable electronics, including control systems employing mixed technologies. The standard is placed in its context of the essential safety requirements of the Machinery Directive, and possible methods for risk assessment are presented. Based upon this information, the report can be used to select the required Performance Level PLr for safety functions in control systems. The Performance Level PL which is actually attained is explained in

detail. The requirements for attainment of the relevant Performance Level and its associated Categories, component reliability, levels of diagnostic coverage, software safety and measures for the prevention of systematic and common-cause failures are all discussed comprehensively. Background information is also provided on implementation of the requirements in real-case control systems. Numerous example circuits show, down to component level, how Performance Levels a to e can be engineered in the selected technologies with Categories B to 4. The examples provide information on the safety principles

employed and on components with well-tried safety functionality. Numerous literature references permit closer study of the examples provided. The report shows how the requirements of EN ISO 13849-1 can be implemented in engineering practice, and thus makes a contribution to consistent application and interpretation of the standard at national and international level.

NEW YORK TIMES
BESTSELLER • “A quite extraordinary novel. Colum McCann has found the form and voice to tell the most complex of stories,

with an unexpected friendship between two men at its powerfully beating heart.”—Kamila Shamsie, author of *Home Fire* FINALIST FOR THE DUBLIN LITERARY AWARD • LONGLISTED FOR THE BOOKER PRIZE • WINNER OF THE NATIONAL JEWISH BOOK AWARD • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Independent • The New York Public Library • Library Journal From the National Book Award-winning and bestselling author of *Let the Great World Spin* comes an epic novel rooted in the unlikely real-life friendship between two fathers. Bassam Aramin is Palestinian. Rami Elhanan is Israeli. They inhabit a world of

conflict that colors every aspect of their lives, from the roads they are allowed to drive on to the schools their children attend to the checkpoints, both physical and emotional, they must negotiate. But their lives, however circumscribed, are upended one after the other: first, Rami’s thirteen-year-old daughter, Smadar, becomes the victim of suicide bombers; a decade later, Bassam’s ten-year-old daughter, Abir, is killed by a rubber bullet. Rami and Bassam had been raised to hate one another. And yet, when they learn of each other’s stories, they recognize the loss that connects them. Together they attempt to use their grief as a weapon for peace—and

with their one small act, start to permeate what has for generations seemed an impermeable conflict. This extraordinary novel is the fruit of a seed planted when the novelist Colum McCann met the real Bassam and Rami on a trip with the non-profit organization Narrative 4. McCann was moved by their willingness to share their stories with the world, by their hope that if they could see themselves in one another, perhaps others could too. With their blessing, and unprecedented access to their families, lives, and personal recollections, McCann began to craft *Apeirogon*, which uses their real-life stories to begin another—one that crosses centuries and continents,

stitching together time, art, history, nature, and politics in a tale both heartbreaking and hopeful. The result is an ambitious novel, crafted out of a universe of fictional and nonfictional material, with these fathers' moving story at its heart.

Selected chapters from the German concrete yearbook are now being published in the new English "Beton-Kalender Series" for the benefit of an international audience. Since it was founded in 1906, the Ernst & Sohn "Beton-Kalender" has been supporting developments in reinforced and prestressed concrete. The aim was to publish a yearbook to reflect progress in "ferro-concrete" structures until - as the book's first editor, Fritz von

Emperger (1862-1942), expressed it - the "tempestuous development" in this form of construction came to an end.

However, the "Beton-Kalender" quickly became the chosen work of reference for civil and structural engineers, and apart from the years 1945-1950 has been published annually ever since. Ultra high performance concrete (UHPC) is a milestone in concrete technology and application. It permits the construction of both more slender and more durable concrete structures with a prolonged service life and thus improved sustainability. This book is a comprehensive overview of UHPC - from the principles

behind its production and its mechanical properties to design and detailing aspects. The focus is on the material behaviour of steel fibre-reinforced UHPC. Numerical modelling and detailing of the connections with reinforced concrete elements are featured as well. Numerous examples worldwide - bridges, columns, facades and roofs - are the basis for additional explanations about the benefits of UHPC and how it helps to realise several architectural requirements. The authors are extensively involved in the testing, design, construction and monitoring of UHPC structures. What they provide here is therefore a unique synopsis of the state of the art with a view to practical applications.

Die Digitalisierung von Gesellschaft und damit auch von Schule schreitet immer weiter voran. Dabei ist die außerschulische Nutzung von digitalen Anwendungen zu einer Normalität geworden. Schüler:innen, Lehrende, Eltern und viele Akteur:innen nutzen eine Vielzahl digitaler Anwendungen in ihrem Alltag. Das kann und sollte sich im Bereich des institutionellen Lernens als ein Teil der gesellschaftlichen Lebenswelt widerspiegeln. Um die Potenziale digitaler Anwendungen intensiver zu beleuchten, wurden

2021 beim Symposium Lernen digital an der Technischen Universität in Chemnitz zum dritten Mal Ideen und Erkenntnisse führender Wissenschaftler:innen und engagierter Praktiker:innen zusammengetragen und diskutiert. Die forcierte Vernetzung über die Fachdidaktiken hinaus konnte abermals bewirken, dass Aktivitäten und Erkenntnisse zusammengetragen werden, die den Einsatz digitaler Medien nicht nur aus mediendidaktischer bzw. -pädagogischer Perspektive reflektieren, sondern vorrangig fachdidaktische Fragen in den Blick nehmen. In diesem Buch werden die wesentlichen

Beiträge zusammengefasst, um sie an Forscher:innen sowie Praktiker:innen in Schulen aber auch der Lehreraus- und -weiterbildung weiterzugeben.
