A Guide to Gender-
analysis Frameworks

Media Pustaka Qalam
A major concern
among ecologists in
and outside the ASEAN
region is the
degradation of the
environment, and the

overexploitation of freshwater and marine resources. There is as yet no indication that freshwater and marine resources are being managed on a sustainable basis, and loss of wetlands, whether freshwater swamps or mangrove swamps, is a major problem in the ASEAN region. Reclamation of mangrove swamps for aquaculture and agriculture seems to be a continuous activity here and the status of marine parks should also be examined in the light of recent resort development activities on small islands. This volume contains numerous recommendations for the promotion of ecological studies and regional cooperation in marine, freshwater

ecology and conservation, with special emphasis on the common water masses like the Strait of Malacca, Gulf of Thailand and the South China Sea.

American Law John Wiley & Sons

In 2004 the Indonesian government made a commitment to provide its entire population with health insurance coverage through a mandatory public health insurance scheme. It has moved boldly already provides coverage to an estimated 76.4 million poor and near poor, funded through the public budget.

Nevertheless, over half the population still lacks health insurance coverage, and the full fiscal impacts of the government's program for the poor have not

been fully assessed or felt. In addition, significant deficiencies in the efficiency and equity of the current health system, unless addressed will exacerbate cost pressures and could preclude the effective implementation of universal coverage (Uc) and the desired result of improvements in population health outcomes and financial protection. For Indonesia to achieve UC, systems' performance must be improved and key policy choices with respect to the configuration of the health financing system must be made. Indonesia's health system performs well with respect to some health outcomes and financial protection, but there is potential

for significant improvement. High-level political decisions are necessary on key elements of the health financing reform package. The key transitional questions to get there include: [the benefits that can be afforded and their impacts on health outcomes and financial protection; [how the more than 50 percent of those currently without coverage will be insured; [how to pay medical care providers to assure access, efficiency, and quality; [developing a streamlined and efficient administrative structure; [how to address the current supply constraints to assure availability of promised services; [how to raise revenues to finance the system, including the program

for the poor as well as currently uninsured groups that may require government subsidization such as the more than 60 million informal sector workers, the 85 percent of workers in firms of less than five employees, and the 70 percent of the population living in rural areas.

Ilmu Dan Alat Ukur

Tanah Greenwood Structural analysis is the corner stone of civil engineering and all students must obtain a thorough understanding of the techniques available to analyse and predict stress in any structure. The new edition of this popular textbook provides the student with a comprehensive introduction to all types of structural and stress analysis, starting

from an explanation of the basic principles of statics, normal and shear force and bending moments and torsion. Building on the success of the first edition, new material on structural dynamics and finite element method has been included. Virtually no prior knowledge of structures is assumed and students requiring an accessible and comprehensive insight into stress analysis will find no better book available. Provides a comprehensive overview of the subject providing an invaluable resource to undergraduate civil engineers and others new to the subject Includes numerous worked examples and problems to aide in the learning process and develop knowledge

and skills Ideal for classroom and training course usage providing relevant pedagogy
Pembelajaran Berbasis SDGs di Universitas untuk Bidang Ilmu Pengetahuan Alam

Springer Science & Business Media

This is a single-volume guide to all the main analytical frameworks for gender-sensitive research and planning. It draws on the experience of trainers and practitioners, and includes step-by-step instructions for using the frameworks.

Health Financing in

Indonesia Emerald

Disaster management, which involves prevention, mitigation, preparedness, response and rehabilitation efforts, has been discussed for a long time. In short,

such management stages can be classified into before, during and after event activities. Disaster preparedness can be referred to as all measures taken to prepare in advance aiming at reducing the impact of possible disasters. Although all preparedness activities aim at reducing the damage at community, on-site practicality, which concerns the full utilisation of the capacities particularly at the time of emergency, has not been well documented, possibly because of difficulties in visualising emergency contexts to be faced by local communities. This book focuses on the methodological approach of CBDRM that has been practised in different

parts of the world, mostly in highly disaster-prone Asian localities.

Structural and Stress Analysis Ayer
Publishing

This new edition of an informative and accessible book guides building surveyors and facilities managers through the key aspects of property maintenance and continues to be of value to both students and practitioners. With the increasing cost of new-build, effective maintenance of existing building stock is becoming ever more important and building maintenance work now represents nearly half of total construction output in the UK.

Building Maintenance Management provides a comprehensive profile of the many

aspects of property maintenance. This second edition has been updated throughout, with sections on outsourcing; maintenance planning; benchmarking and KPIs; and current trends in procurement routes (including partnering and the growth of PFI) integrated into the text. There is also a new chapter on the changing context within which maintenance is carried out, largely concerned with its relationship to facilities management. More coverage is given of maintenance organisations and there are major updates to relevant aspects of health and safety and to contract forms.

Public Accountability

Springer Science & Business Media

Focuses on the public sector in developing countries. Provides tools of analysis for discovering equity in tax burdens as well as in public spending and judging government performance in its role in safeguarding the interests of the poor and disadvantaged.

Outlines a framework for a rights-based approach to citizen empowerment - in other words, creating an institutional design with appropriate rules, restraints, and incentives to make the public sector

responsive and accountable to an average voter.

Proverbs World Bank Publications

This is the third edition of the popular text on graph theory. As in previous editions, the text presents graph theory as a mathematical discipline and emphasizes clear exposition and well-written proofs. New in this edition are expanded treatments of graph decomposition and external graph theory, a study of graph vulnerability and domination, and introductions to voltage graphs, graph labelings, and the probabilistic method in graph theory.

An Introduction to Indonesian Law

Coronet Books

Many corporations are finding that the size of their data sets are outgrowing the capability of their systems to store and process them. The data is becoming too big to manage and use with traditional tools. The solution: implementing a big data system. As *Big Data Made Easy: A Working Guide to the Complete Hadoop Toolset* shows, Apache Hadoop offers a scalable, fault-tolerant system for storing and processing data in parallel. It has a very rich toolset that allows for storage (Hadoop), configuration (YARN and ZooKeeper), collection (Nutch and

Solr), processing (Storm, Pig, and Map Reduce), scheduling (Oozie), moving (Sqoop and Avro), monitoring (Chukwa, Ambari, and Hue), testing (Big Top), and analysis (Hive). The problem is that the Internet offers IT pros wading into big data many versions of the truth and some outright falsehoods born of ignorance. What is needed is a book just like this one: a wide-ranging but easily understood set of instructions to explain where to get Hadoop tools, what they can do, how to install them, how to configure them, how to integrate them, and how to use them successfully. And you need an expert who has worked in this area for a decade—someone just like author and big

data expert Mike Frampton. *Big Data Made Easy* approaches the problem of managing massive data sets from a systems perspective, and it explains the roles for each project (like architect and tester, for example) and shows how the Hadoop toolset can be used at each system stage. It explains, in an easily understood manner and through numerous examples, how to use each tool. The book also explains the sliding scale of tools available depending upon data size and when and how to use them. *Big Data Made Easy* shows developers and architects, as well as testers and project managers, how to:

- Store big data
- Configure big data

- Process big data
- Schedule processes
- Move data among SQL and NoSQL systems
- Monitor data
- Perform big data analytics
- Report on big data processes and projects
- Test big data systems

Big Data Made Easy also explains the best part, which is that this toolset is free. Anyone can download it and—with the help of this book—start to use it within a day. With the skills this book will teach you under your belt, you will add value to your company or client immediately, not to mention your career.

Fourth Edition IRDH
 Aline Leon´ In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous

fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out

from the ground, we have been exhausting a heritage given by nature.

Perkembangan ilmu politik di Indonesia

Polity

This book contains 28 chapters grouped into six sections providing information on forests interact with the other components of the physical and natural world with the human society, and how we could manage forests globally to make the most of their contribution to mitigation of climate change along with the established objective of sustainable management to maximize the full range of economic and non-market benefits which forests provide. Topics covered include: introduction on the interaction between

forests and climate change; climate change, forestry and science-policy interface; forestry options for contributing to climate change mitigation; options for adaptation due to impacts of climate change on forests; current and future policy of national and international frameworks; and implications for future forestry and related environmental and development policy.

De Materia Medica

Chapman and Hall/CRC

What is democracy?

How do we know when we have it? Is liberal democracy merely one, or the only, version of democracy.

Public Expenditure

Analysis Nova Science Publishers

'Strategic Information Management' has been

completely up-dated to reflect the rapid changes in IT and the business environment since the publication of the second edition. Half of the readings in the book have been replaced to address current issues and the latest thinking in Information Management. It goes without saying that Information technology has had a major impact on individuals, organizations and society over the past 50 years or so. There are few organizations that can afford to ignore IT and few individuals who would prefer to be without it. As managerial tasks become more complex, so the nature of the required information systems (IS) changes - from structured, routine support to ad

hoc, unstructured, complex enquiries at the highest levels of management. As with the first and second editions, this third edition of 'Strategic Information Management: Challenges and strategies in managing information systems' aims to present the many complex and inter-related issues associated with the management of information systems. The book provides a rich source of material reflecting recent thinking on the key issues facing executives in information systems management. It draws from a wide range of contemporary articles written by leading experts from North America and Europe. 'Strategic Information

Management' is designed as a course text for MBA, Master's level students and senior undergraduate students taking courses in information management. It provides a wealth of information and references for researchers in addition.

Communicating Sustainability for the Green Economy

Routledge

This survey of land problems and policies emphasizes problems of land-resource

evaluation, conservation, population pressures against land resources, agricultural land requirements and production potentialities. Also discussed is the development and settlement of agricultural land, land tenure, and institutional arrangements that have arisen from the impact of governmental programs on land use, land planning and land reform.
