Mathematical Physics in Theoretical Chemistry Routledge

This second of two comprehensive reference texts on differential equations continues coverage of the essential material students they are likely to encounter in solving engineering and mechanics problems across the field - alongside a preliminary volume on theory. This book covers a very broad range of problems, including beams and columns, plates, shells, structural dynamics, catenary and cable suspension bridge, nonlinear buckling, transports and waves in fluids, geophysical fluid flows, nonlinear waves and solitons, Maxwell equations, Schrodinger equations,

celestial mechanics and fracture mechanics and dynamics. The focus is on the mathematical technique for solving the differential equations involved. All readers who are concerned with and interested in engineering mechanics problems, climate change, and nanotechnology will find topics covered in this book providing valuable information and mathematics background for their multi-disciplinary research and education.

Globe Education Shorter Shakespeare: Romeo and Juliet
Routledge

Exam Board: Non-Specific Level: KS3 Subject: English First Teaching: September 2015 First Exam: Summer 2018 Get straight to the heart of Shakespeare's Romeo and Juliet; students' confidence and understanding develop faster as they explore the plot, themes and Shakespeare's language, which is supported

throughout this abridged play text from Globe Education. This title: - Reduces the length of the play by a third, while preserving the intricacies of the plot, enabling students to engage with the whole story in the class time available - Builds understanding of Shakespeare's language by providing a detailed glossary alongside the text for quick and easy reference, plus a range of language-focused activities - Offers a tried-and-tested approach to introducing Shakespeare, based on Globe Education's shortened 'Playing Shakespeare' productions that have been seen and appreciated by over 150,000 students - Helps students form their own personal responses to Shakespeare's Romeo and Juliet, stimulated by stunning photographs from Globe productions and questions that reflect on context, characters and themes - Lays the foundations for GCSE success by including activities that target the skills needed for the assessment objectives Free teacher support Shorter Shakespeare: Romeo and Juliet is supported by free online teaching resources for each scene: - Teaching notes with guidance on how to approach the scene - Practical group activities to use in the classroom - Questions on language, context, themes, character and performance - Web links to extra resources including photographs from Globe productions, interviews with actors and contextual information This title is also accompanied by 10 video clips from Globe Education's shortened 'Playing Shakespeare' production of Romeo and Juliet.

Beautiful Edition of the Psalms Designed for Journaling Journaling through the Bible has always been a wonderful way to draw nearer to God, and what better book to journal than the Psalms--

the prayer book of the Bible! With Scripture on one page and writing space on the other, Journaling Through the Psalms lets you record all your thoughts, questions, and prayers as you read through this magnificent book of the Bible. Author and radio host Susie Larson has provided an introduction and journaling prompts to help you when you feel stuck or don't know where to begin. And when you're done, you'll have a beautiful keepsake reminder of the time you spent in God's Word.

Swiss architecture is commonly conotated with the names of celebrated architects such as Marion Botta, Peter Zumthor, or Herzog & de Meuron, and with their iconic buildings. Yet there is much more to the topic than, for example, beautiful private houses or spectacular public projects such as museums. This new book looks at the Swiss variety of co-operative housing developments with a special focus on the city of Zurich. Over the past two decades, such developments have changed significantly. Support by public funding and open competitions have helped to design and realise a vast number of highly innovative co-operative projects in Zurich over that period. Many of them can serve as well as models for how to meet the constantly increasing demand for urban housing. 'New Housing in Zurich' is the first comprehensive survey of contemporary co-operative estates in Switzerland's largest city. It features some 50 projects by type, lavishly illustrated with images and plans, thus also providing a typology of multi-unit residential architecture. Essays on the history of co-operative housing in Switzerland, the interplay between co-operatives and the city and their impact on urban development on the larger scale, on new

urban and architectural concepts, on co-operatives in the post-industrial age, and on their social dynamics round out the volume.

Empires of Knowledge charts the emergence of different kinds of scientific networks – local and long-distance, informal and institutional, religious and secular – as one of the important phenomena of the early modern world. It seeks to answer questions about what role these networks played in making knowledge, how information traveled, how it was transformed by travel, and who the brokers of this world were. Bringing together an international group of historians of science and medicine, this book looks at the changing relationship between knowledge and community in the early modern period through case studies connecting Europe, Asia, the Ottoman Empire, and the Americas. It explores a landscape of understanding (and misunderstanding) nature through examinations of well-known intelligencers such as overseas missions, trading companies, and empires while incorporating more recent scholarship on the many less prominent go-betweens, such as translators and local experts, which made these networks of knowledge vibrant and truly global institutions. Empires of Knowledge is the perfect introduction to the global history of early modern science and medicine.

This collection is a response to Alex Potts's provocative 2013 book *Experiments in modern realism*. Twenty essays by leading

art historians explore Pott's recasting of realism, providing a new understanding of artworks dating from the eighth to twenty-first centuries and challenging established thinking on art's relation to the everyday.

ICOLD Bulletin 150, *Cutoffs for Dams*, discusses foundation treatment methods using cutoff-type barriers. High emphasis is given to alluvial deposits throughout this document; however, different materials may require cutoff. The construction of cutoffs has made significant advances mainly through the development of more powerful machinery for drilling and excavation, but also through the introduction of new concepts and techniques, such as jet grouting and deep soil mixing. The following types of cutoffs are presented in this Bulletin: - Diaphragm walls - Vib walls - Pile walls - Superimposed concreted galleries - Jet grouting - Deep mixing These methods are described, and the practical application of each method is illustrated by selected case histories. These case histories also demonstrate how certain difficulties specific to a particular dam site have been dealt with. The performance of cutoffs should be monitored so that their efficiency in reducing flow and piezometric head can be evaluated. Piezometers installed in the foundation upstream and downstream of the cutoff are needed to meet this objective.

This book is the first to explore the deep and lasting impacts of

the largest colonial trading company, the British East India Company on the natural environment. The contributors – drawn from a wide range of academic disciplines – illuminate the relationship between colonial capital and the changing environment between 1600 and 1857.

Art as Worldmaking Taylor & Francis

Majestic and magical landscapes, the soft beauty of fields of flowers, the raw cold of winter: the works of Harald Sohlberg combine a Romantic perception of nature with a contemporary pictorial language akin to Symbolism. This volume assembles some 60 paintings, in addition to a number of drawings, prints and photographs by the artist and grants insight into his conceptual world through his correspondence. In particular the mountain world surrounding Rondane National Park provided Harald Sohlberg (1869-1935) with inexhaustible inspiration for countless studies and watercolours which were later incorporated into his landscape pictures. This volume places one of his most famous works, 'Winter Night in the Mountains', in a new context and casts light on less well-known aspects of Sohlberg's oeuvre, which also includes street scenes, for example. One characteristic of his works that is particularly attractive is the lack of people in them – not least because their traces always appear present. This reveals a critical attitude to the modern age and at the same time allows the viewer to become immersed in his or her own stories. Exhibition: National Gallery, Oslo, Norway (29.9.2018 - 13.1.2019) / Dulwich Picture Gallery, London, UK (13.2. - 2.6.2019) / Museum Wiesbaden, Germany (12.7. - 27.10.2019). Innovative Federal Reserve Policies During the Great Financial Crisis Royal Society of Chemistry

This book, *Innovative Federal Policies During the Great Financial Crisis*, contains discussions of unconventional monetary policies, policy changes to address systemic and payments systems risks, new macroprudential policies, the 'stretching' of the financial safety net, changes in the Fed's liquidity funding facility (the discount window), use of the Fed's balance sheet as a tool of monetary policy, and alternative means to deal with real-estate asset bubbles and potential financial instability. The 10 chapters in this book offer a unique analysis of several innovative approaches by the Federal Reserve that contributed to the stabilization of the US economy following the Great Recession. What unique policies were implemented? Toward what goal? Were they effective? Were there unintended consequences? Additionally, but less thoroughly, events in the Euro market are also discussed, and policies (and their impact) of the ECB are critiqued. Based on papers presented at the 91st Annual Conference of the Western Economic Association International Meetings in Portland, Oregon, 2016, *Innovative Federal Policies During the Great Financial Crisis* adds significantly to the debate over why innovative or unconventional policies were needed, how they were implemented and how effective they were.

Inorganic solid adsorbents/sorbents are attractive materials for capturing carbon dioxide (CO₂) from flue gases after fossil fuel combustion. Post-combustion Carbon Dioxide Capture Materials introduces the key inorganic materials used as adsorbents/sorbents with specific emphasis on their design, synthesis, characterization, performance, and mechanism.

Dedicated chapters cover carbon-based adsorbents, zeolite- and silica-based adsorbents, metal-organic framework (MOF)-based adsorbents, and alkali-metal-carbonate-based adsorbents. The final chapter discusses the practical application aspects of these adsorbents used in carbon dioxide capture from flue gases. Edited and written by world-renowned scientists in each class of the specific material, this book will provide a comprehensive introduction for advanced undergraduates, postgraduates and researchers from both academic and industrial fields wishing to learn about the topic.

Scholars and readers alike need little help identifying the infamous Bridget Jones or Carrie Bradshaw. While it is no stretch to say that these fictional characters are the most recognizable within the chic lit genre, there are certainly many others that have helped define this body of work. While previous research has focused primarily on white American chick lit, *Theorizing Ethnicity and Nationality in the Chick Lit Genre*, takes a wider look at the genre, by exploring chick lit novels featuring protagonists from a variety of ethnic backgrounds set both within and outside of the US.

Mathematical Physics in Theoretical Chemistry deals with important topics in theoretical and computational chemistry. Topics covered include density functional theory, computational methods in biological chemistry, and Hartree-Fock methods. As the second volume in the *Developments in Physical & Theoretical*

Chemistry series, this volume further highlights the major advances and developments in research, also serving as a basis for advanced study. With a multidisciplinary and encompassing structure guided by a highly experienced editor, the series is designed to enable researchers in both academia and industry stay abreast of developments in physical and theoretical chemistry. Brings together the most important aspects and recent advances in theoretical and computational chemistry. Covers computational methods for small molecules, density-functional methods, and computational chemistry on personal and quantum computers. Presents cutting-edge developments in theoretical and computational chemistry that are applicable to graduate students and research professionals in chemistry, physics, materials science and biochemistry.

New Housing in Zurich Rowman & Littlefield
Expanding on the highly successful first edition, this second edition of *Proton Therapy Physics* has been completely restructured and updated throughout, and includes several new chapters. Suitable for both newcomers in medical physics and more seasoned specialists in radiation oncology, this book provides an in-depth overview of the physics of this radiation therapy modality, eliminating the need to dig through information scattered across medical physics literature. After tracing the history of proton therapy, the book explores the atomic and nuclear physics background necessary for understanding proton interactions with tissue. The text then covers dosimetry, including beam delivery, shielding aspects, computer simulations, detector systems and measuring techniques for reference dosimetry. Important for daily operations, acceptance testing,

commissioning, quality assurance and monitor unit calibrations are outlined. The book moves on to discussions of treatment planning for single- and multiple-field uniform doses, dose calculation concepts and algorithms, and precision and uncertainties for nonmoving and moving targets. Imaging for treatment guidance as well as treatment monitoring is outlined. Finally, the biological implications of using protons from a physics perspective are discussed. This book is an ideal practical guide for physicians, dosimetrists, radiation therapists, and physicists who already have some experience in radiation oncology. It is also an invaluable reference for graduate students in medical physics programs, physicians in their last year of medical school or residency, and those considering a career in medical physics. Features: Updated with the latest technologies and methods in the field, covering all delivery methods of proton therapy, including beam scanning and passive scattering Discusses clinical aspects, such as treatment planning and quality assurance Offers insight on the past, present, and future of proton therapy from a physics perspective

The Icelandic Adventures of Pike Ward is the entertaining and intrepid diary of a Devon fish merchant who became an Icelandic knight. An important figure in the birth of modern Iceland, Pike Ward's writing and photographs captured a unique record of his adopted country at the beginning of the twentieth century. His 1906 journal is a frank and funny account of one year in his life, from mixing in Reykjavík society to bargaining for fish on the remote coasts of the north and east. He must travel by pack

horse and steamship through wild terrain and terrible seas, all the while attempting to outwit his rivals and cope with the challenges of surviving in a tough land. An introduction and epilogue by K.J. Findlay place the story in the context of a pivotal period in Iceland's history and explain Pike Ward's role in the nation's remarkable rise.

Working closely with Moebius Production in France, Dark Horse presents the final part of Moebius's Inside Moebius series. In this third and most surreal volume, Jean "Moebius" Giraud exists in an expansive, magical desert locale within his subconscious. He not only meets and talks with several of his own creations--like Stel, Blueberry, Major Grubert, and Arzak--but he encounters versions of himself from multiple decades and argues with them about art and creativity. This final volume also features the last interview segment about this strange series between the artist and Isabelle Giraud. Translation by World of Edena translator Diana Schutz.
