Dress Accessories, C.  
1150 - C. 1450 MIT Press  
Wordplay involving  
several linguistic codes is  
an important modality of  
ludic language. This  
volume offers a

multidisciplinary approach  
to the topic, discussing  
examples from different  
epochs, genres, and  
communicative situations.  
The contributions  
illustrate the multi-  
dimensionality, linguistic  
make-up, and the special  
interactive potential of  
wordplay across linguistic  
and cultural boundaries,  
including the challenging

practice of translation.  
*Celtic and Roman  
Artefacts* Barkhuis  
This volume comprises  
papers presented to Dick  
Stapert on the occasion of  
his retirement from the  
Groningen Institute of  
Archaeology (University of  
Groningen) in 2011 and  
celebrates his scientific  
career. The contributions  
cover nearly 300,000

years of Human History and were written by colleagues, former students and friends. Topics include the making and use of fire, children in the Stone Age, spatial analysis, and other themes related to the study of the Palaeolithic, Mesolithic and beyond. *Germania topo-chronostemmato-graphica sacra et profana, etc* Legare Street Press  
 Dän. Zusammenfass.  
**The Soundscape of Modernity** CRC Press  
 All finds from the field investigations at

Tonovcov grad near Kobarid are published in the second volume. An exceptional number of finds represents the base for studies of the material culture in Late Antiquity (metallic finds, glass finds, pottery finds), as well as for the others archaeological (anthropological and zoological) remains. Greek, Etruscan and Roman Bronzes Walter de Gruyter GmbH & Co KG  
 Popular and multimodal forms of cultural products are becoming increasingly visible within translation

studies research. Interest in translation and music, however, has so far been relatively limited, mainly because translation of musical material has been considered somewhat outside the limits of translation studies, as traditionally conceived. Difficulties associated with issues such as the 'musicality' of lyrics, the fuzzy boundaries between translation, adaptation and rewriting, and the pervasiveness of covert or unacknowledged translations of musical elements in a variety of

settings have generally limited the research in this area to overt and canonized translations such as those done for the opera. Yet the intersection of translation and music can be a fascinating field to explore, and one which can enrich our understanding of what translation is and how it relates to other forms of expression. This special issue is an attempt to open up the field of translation and music to a wider audience within translation studies, and to an extent, within

musicology and cultural studies. The volume includes contributions from a wide range of musical genres and languages: from those that investigate translation and code-switching in North African rap and rai, and the intertextual and intersemiotic translations revolving around Mahler's lieder in Chinese, to the appropriation and after-life of Kurdish folk songs in Turkish, and the emergence of rock'n roll in Russian. Other papers examine the reception of

Anglo-American stage musicals and musical films in Italy and Spain, the concept of 'singability' with examples from Scandinavian languages, and the French dubbing of musical episodes of TV series. The volume also offers an annotated bibliography on opera translation and a general bibliography on translation and music. *The Archaeometallurgy of Iron* BAR British Series I am. We are. That is enough. Now we have to start. These are the opening words of Ernst

Bloch's first major work, *The Spirit of Utopia*, written mostly in 1915-16, published in its first version just after the First World War, republished five years later, 1923, in the version here presented for the first time in English translation. *The Spirit of Utopia* is one of the great historic books from the beginning of the century, but it is not an obsolete one. In its style of thinking, a peculiar amalgam of biblical, Marxist, and Expressionist turns, in its analytical

skills deeply informed by Simmel, taking its information from both Hegel and Schopenhauer for the groundwork of its metaphysics of music but consistently interpreting the cultural legacy in the light of a certain Marxism, Bloch's *Spirit of Utopia* is a unique attempt to rethink the history of Western civilizations as a process of revolutionary disruptions and to reread the artworks, religions, and philosophies of this tradition as incentives to continue disrupting. The alliance between

messianism and Marxism, which was proclaimed in this book for the first time with epic breadth, has met with more critique than acclaim. The expressive and baroque diction of the book was considered as offensive as its stubborn disregard for the limits of "disciplines." Yet there is hardly a "discipline" that didn't adopt, however unknowingly, some of Bloch's insights, and his provocative associations often proved more productive than the statistical account of

social shifts. The first part of this philosophical meditation--which is also a narrative, an analysis, a rhapsody, and a manifesto--concerns a mode of "self-encounter" that presents itself in the history of music from Mozart through Mahler as an encounter with the problem of a community to come. This "we-problem" is worked out by Bloch in terms of a philosophy of the history of music. The "self-encounter," however, has to be conceived as "self-invention," as the active,

affirmative fight for freedom and social justice, under the sign of Marx. The second part of the book is entitled "Karl Marx, Death and the Apocalypse." I am. We are. That's hardly anything. But enough to start.

**A History of the Oratorio: The oratorio in the nineteenth and twentieth centuries**

Alpine Publications Incorporated

This book is the only text devoted entirely to archaeological stratigraphy, a subject of

fundamental importance to most studies in archaeology. The first edition appeared in 1979 as a result of the invention, by the author, of the Harris Matrix--a method for analyzing and presenting the stratigraphic sequences of archaeological sites. The method is now widely used in archaeology all over the world. The opening chapters of this edition discuss the historical development of the ideas of archaeological stratigraphy. The central

chapters examine the laws and basic concepts of the subject, and the last few chapters look at methods of recording stratification, constructing stratigraphic sequences, and the analysis of stratification and artifacts. The final chapter, which is followed by a glossary of stratigraphic terms, gives an outline of a modern system for recording stratification on archaeological sites. This book is written in a simple style suitable for the student or amateur. The radical ideas set out

should also give the professional archaeologist food for thought. - Covers a basic principle of all archaeological excavations - Provides a data description and analysis tool for all such digs, which is now widely accepted and used - Gives extra information  
*The City of Dreaming Books* UNC Press Books  
 The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects,

from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon - understood in a wide sense as not being necessarily limited to the word level - by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical

processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

Gruyter GmbH & Co KG

A vibrant history of acoustical technology and aural culture in early-twentieth-century America. In this history of aural culture in early-twentieth-century America, Emily Thompson charts dramatic transformations in what

people heard and how they listened. What they heard was a new kind of sound that was the product of modern technology. They listened as newly critical consumers of aural commodities. By examining the technologies that produced this sound, as well as the culture that enthusiastically consumed it, Thompson recovers a lost dimension of the Machine Age and deepens our understanding of the experience of change that characterized the era.

Reverberation equations, sound meters, microphones, and acoustical tiles were deployed in places as varied as Boston's Symphony Hall, New York's office skyscrapers, and the soundstages of Hollywood. The control provided by these technologies, however, was applied in ways that denied the particularity of place, and the diverse spaces of modern America began to sound alike as a universal new sound predominated. Although this

sound—clear, direct, efficient, and nonreverberant—had little to say about the physical spaces in which it was produced, it speaks volumes about the culture that created it. By listening to it, Thompson constructs a compelling new account of the experience of modernity in America.

**Crossing Languages to Play with Words** Walter de Gruyter GmbH & Co KG Beyond the Aegean, some of the earliest written records of Europe come from the south-west, what

is now southern Portugal and south-west Spain. Herodotus, the 'Father of History', locates the Keltoi or 'Celts' in this region, as neighbours of the Kunetes of the Algarve. He calls the latter the 'westernmost people of Europe'. However, modern scholars have been disinclined - until recently - to consider the possibility that the south-western inscriptions and other early linguistic evidence from the kingdom of Tartessos were Celtic. This book shows how much of this

material closely resembles the attested Celtic languages: Celtiberian (spoken in east-central Spain) and Gaulish, as well as the longer surviving languages of Ireland, Britain and Brittany. In many cases, the 85 Tartessian inscriptions of the period c. 750-c. 450 BC can now be read as complete statements written in an Ancient Celtic language.

"[An] important essay by a philosopher who more

convincingly than any other I can think of demonstrates the continuing significance of his vocation in the life of our culture."—Karsten Harries, *The New York Times Book Review* With *The Presence of Myth*, Kolakowski demonstrates that no matter how hard man strives for purely rational thought, there has always been—and always will be—a reservoir of mythical images that lend "being" and "consciousness" a specifically human meaning. "Kolakowski

undertakes a philosophy of culture which extends to all realms of human intercourse—intellectual, artistic, scientific, and emotional. . . . [His] book has real significance for today, and may well become a classic in the philosophy of culture."—*Anglican Theological Review* [Mobility and Pottery Production](#) Springer The Celts are commonly considered to be one of the great peoples of Europe, with continuous racial, cultural and linguistic genealogy from

the Iron Age to the modern-day 'Celtic fringe'. This book shows, in contrast, that the Celts, as they have been known and understood over two thousand years, are simply the 'other' of the dominant cultural and political traditions of Europe. It is this continuous 'otherness' which lends them apparent continuity and substance.

Learning to Teach

Mathematics in the Secondary School covers a wide range of issues in the teaching of mathematics and gives supporting activities to students to enable them to translate theory into practice. Topics covered include: mathematics in the National Curriculum different teaching approaches using ICT mathematics education for pupils with special needs in mathematics assessment and public examinations teaching mathematics post-16 professional development.

Methoden Der Schlafforschung ENS Editions

This book combines findings from archaeology and anthropology on the making, use and distribution of hand-made pottery, the rhythms of mobility involved and the transformations triggered by such processes, discussing different theoretical perspectives and methodological approaches.

*Celan Studies* Elsevier  
Peter Szondi's *Celan Studies* marked the beginning of critical work

on Paul Celan, the most important German poet of the second half of the twentieth century. The book's three studies each concentrate on a different Celan poem. "The Poetry of Constancy: Paul Celan's Translation of Shakespeare's Sonnet 105" investigates a historical turn from a poetry that claims to present its object to a poetry that only promises to do so. "Reading 'Engführung'" follows the movement of poetic language into territory undisclosed to epistemic

reason. "Eden" addresses "Du liegst," a poem on the murder of Rosa Luxemburg and Karl Liebknecht; Szondi actually was with Celan when the poem was written. It analyzes the relation between the historical facts to which a poem refers and its composition. The book contains, as appendixes, Szondi's notes for three more projected studies of Celan poems, left unwritten at the time of his death in 1971. Nørre Sandegård Vest Routledge

This is a comprehensive history of the German university system in the eighteenth and nineteenth centuries. It examines the evolution of the universities from their moribund state in 1700 to their rise to the pinnacle of world prestige and scientific leadership in 1914. In contrast to traditional university histories published in Germany, Professor McClelland's book surveys the entire university system. It explores the influence of political, social and economic

forces that helped to shape the growth, reform and scholarly excellence of the late nineteenth-century 'research university'. It thus uncovers the motivating forces behind the change of the system of higher education to meet the needs of the expanding German society. The book will be of interest to historians of education and particularly to the many historians of modern Germany.

### **Medieval Artefacts**

University of Chicago Press

The artificial intelligence (AI) landscape has evolved significantly from 1950 when Alan Turing first posed the question of whether machines can think. Today, AI is transforming societies and economies. It promises to generate productivity gains, improve well-being and help address global challenges, such as climate change, resource scarcity and health crises. *Medieval Illuminators and Their Methods of Work*

Routledge  
In this whimsical fantasy adventure, a novelist's

search for an author takes him to a magical city, a villainous literary scholar, and perilous catacombs. Optimus Yarnspinner's search for an author's identity takes him to Bookholm—the so-called City of Dreaming Books. On entering its streets, our hero feels as if he has opened the door of a gigantic second-hand bookshop. His nostrils are assailed by clouds of book dust, the stimulating scent of ancient leather, and the tang of printer's ink. Soon, though, Yarnspinner falls into the

clutches of the city's evil genius, Pfistomel Smyke, who treacherously maroons him in the labyrinthine catacombs underneath the city, where reading books can be genuinely dangerous . . . In *The City of Dreaming Books*, Walter Moers transports us to a magical world where reading is a remarkable adventure. Only those intrepid souls who are prepared to join Yarnspinner on his perilous journey should read this book. We wish the rest of you a long, safe, unutterably dull, and

boring life! Praise for *The City of Dreaming Books* "German author and cartoonist Moers returns to the mythical lost continent of Zamonia in his uproarious third fantasy adventure to be translated into English, a delightfully imaginative mélange of Shel Silverstein zaniness and oddball anthropomorphism à la Terry Pratchett's *Discworld*. . . . A wonderfully whimsical story that will appeal to readers of all ages." —Publishers Weekly "A

salmagundi of whimsy, imagination and book lore—remarkable fun." —Cleveland Plain Dealer "Moers puts Tolkien through some sort of Willy Wonka sweetening process and comes up with characters such as Optimus Yarnspinner, who, names being fate and all, just has to be a storyteller." —Kirkus Reviews
