The Filmmaker's Handbook Quercus

The Routledge International Handbook of Ethnographic Film and Video is a state-of-the-art book which encompasses the breadth and depth of the field of ethnographic film and video-based research. With more and more researchers turning to film and video as a key element of their projects, and as research video production becomes more practical due to technological advances as well as the growing acceptance of video in everyday life, this critical book supports young researchers looking to develop the skills necessary to produce meaningful ethnographic

films and videos, and serves as a comprehensive resource for social scientists looking to better understand and appreciate the unique ways in which film and video can serve as ways of knowing and as tools of knowledge mobilization. Comprised of 31 chapters authored by some of the world's leading experts in their respective fields, the book's contributors synthesize existing literature, introduce the historical and conceptual dimensions of the field, illustrate innovative methodologies and techniques, survey traditional and new technologies, reflect on ethics and moral imperatives, outline ways to work with people, objects, and tools, and shape the future agenda of the field. With a particular focus on making ethnographic film and video, as opposed to analyzing or critiquing it, from a variety of methodological approaches and styles, the Handbook provides both a

comprehensive introduction and up-to-date survey of the field for a vast variety of audiovisual researchers, such as scholars and students in sociology, anthropology, geography, communication and media studies, education, cultural studies, film studies, visual arts, and related social science and humanities. As such, it will appeal to a multidisciplinary and international audience, and features a dynamic, forward-thinking, innovative, and contemporary focus oriented toward the very latest developments in the field, as well as future possibilities.

This book covers all aspects of physical vapor deposition (PVD) process technology from the characterizing and preparing the substrate material, through deposition processing and film characterization, to post-deposition processing. The emphasis of the book is on the aspects of the process flow that are critical to economical deposition of films that can meet the required performance specifications. The book covers subjects seldom treated in the literature: substrate characterization, adhesion, cleaning and the processing. The book also covers the widely discussed subjects of vacuum technology and the fundamentals of individual deposition processes. However, the author uniquely relates these topics to the practical issues that arise in PVD processing, such as contamination control and film growth effects, which are also rarely discussed in the literature. In bringing these subjects together in one book, the reader can understand the interrelationship between various aspects of the film deposition processing and the resulting film properties. The author draws upon his long experience with developing PVD

processes and troubleshooting the processes in the manufacturing environment, to provide useful hints for not only avoiding problems, but also for solving problems when they arise. He uses actual experiences, called ""war stories"", to emphasize certain points. Special formatting of the text allows a reader who is already knowledgeable in the subject to scan through a section and find discussions that are of particular interest. The author has tried to make the subject index as useful as possible so that the reader can rapidly go to sections of particular interest. Extensive references allow the reader to pursue subjects in greater detail if desired. The book is intended to be both an introduction for those who are new to the field and a valuable resource to those already in the field. The discussion of transferring technology between R&D and manufacturing provided in Appendix 1, will be of special interest to the manager or engineer responsible for moving a PVD product and process from R&D into production. Appendix 2 has an extensive listing of periodical publications and professional societies that relate to PVD processing. The extensive Glossary of Terms and Acronyms provided in Appendix 3 will be of particular use to students and to those not fully conversant with the terminology of PVD processing or with the English language.

The authors cover the practical, technical, and theoretical aspects of filming, from fundraising to exhibition, in lucid and complete detail—information never before assembled in one place. The first section discusses filmmaking styles and the assumptions that frequently hide unacknowledged behind them, as well as the practical and ethical issues involved in moving from fieldwork to filmmaking. The second section concisely and clearly explains the technical aspects, including how to select and use equipment, how to shoot film and video, and the reasons for choosing one or the other, and how to record sound. Finally, the third section outlines the entire process of filmmaking: preproduction, production, postproduction, and distribution. Filled with useful illustrations and covering documentary and ethnographic filmmaking of all kinds, *Cross-Cultural Filmmaking* will be as essential to the anthropologist or independent documentarian on location as to the student in the classroom.
