This important new text provides a framework for occupational therapists and occupational therapy assistants that can be applied in all children and youth practice settings. The content lays a foundation for conceptualizing the role of occupational therapy in mental health promotion, prevention, and intervention when working with children and youth—those with and without disabilities, mental illness, or both—in schools and community settings. Reflecting a public health approach to occupational therapy services at the universal, targeted, and intensive levels, the emphasis is on helping all children develop and maintain positive affect, positive psychological and social functioning, productive activities, and resilience in the face of adversity.

Of the estimated 70 million children in the United States, 6 million to 9 million have a serious

emotional disturbance. However, only 1 in 5 of these children receives any professional help. Over the years, the view of children's mental health services has changed. This new thinking has altered how occupational therapy services are perceived and implemented. In addition to providing services to children diagnosed with a mental illness, occupational therapy professionals can help children develop and maintain mental health in school, community, and mental health settings. Using an evidence-based perspective and public health model, this Practice Guideline provides an overview of the occupational therapy process for mental health promotion, prevention, and intervention for children ages 3 to 21 years. It defines the occupational therapy domain, process, and interventions that occur within the boundaries of acceptable practice with this underserved population. Interventions include those for promotion, prevention, and intensive individualized care on topics such as social skills, health promotion, play/recreation/leisure, and cognitive-behavioral therapy.
