 Wedekind's play about adolescent sexuality is as disturbing today as when it was first produced Wedekind's notorious play Spring Awakening was written in 1891 but had to wait the greater part of a century before it received its first complete performance in Britain, at the National Theatre in 1974. The production was highly praised, much of its strength deriving from this translation by Edward Bond and Elisabeth Bond Pabla, 'scrupulously faithful both to Wedekind's irony and his poetry.' The Times This translation of Spring Awakening was first performed at the National Theatre, London on 24 May 1974. For this edition the translator, Edward Bond, has written a note on the play and a factual introduction to Wedekind's life and work.

 Pulitzer Prize-winning sequel to A Son of the Middle Border continues the author's autobiographical theme and deals sensitively with Garland's marriage and later career, as well as the challenges of pioneer life in 19th-century mid-America.

 This collection comprises 15 essays ranging from the social history of and attitudes towards Scots to the representation of

Scottishness in literary language and to modern sociolinguistic work. The uniqueness of the historical and present-day linguistic situation in Scotland makes the volume of particular concern not only to Scotophiles, but also to linguists interested in bidialectalism, language planning, literary dialect, urban surveys, and language and education. The authors include linguistist Scotland, England, the United States, Scandinavia and Germany.

 Recognizing the increasing importance of the role of gravity and the geoid, and considering the substantial synergistic effects which result from close cooperation, the International Gravity Commission and the International Geoid Commission, both scientific bodies of the International Association of Geodesy, decided to hold a Joint Meeting under the common topic "Gravity and Geoid" in Graz, Austria, from Sept. 11 - 17, 1994. The earth's gravity field is increasingly attracting the attention of the geosciences for many reasons. As a response of the earth's internal mass distribution, it significantly helps us to understand the structure of the earth and its dynamics. On the other hand, the earth's gravity field controls the orbits of satellites and is of paramount importance for accurate orbit prediction'. For geodesy the geoid, representing the gravity field, serves as a unique height reference surface. It is the link between satellite-derived positions and useful geodetic coordinates of utmost precision. For oceanography, the offset of the dynamic ocean surface from the geoid is the signal which bears important information about ocean circulation patterns.

 While many fans remember The Lone Ranger, Ace Drummond and others, fewer focus on the facts that serials had their roots in silent film and that many foreign studios also produced serials, though few made it to the United States. The 471 serials and 100 series (continuing productions without the cliffhanger endings) from the United States and 136 serials and 37 series from other countries are included in this comprehensive reference work. Each entry includes title, country of origin, year, studio, number of episodes, running time or number of reels, episode titles, cast, production credits, and a plot synopsis.

 Databases and database systems in particular, are considered as kernels of any Information System (IS). The rapid growth of the web on the Internet has dramatically increased the use of semi-structured data and the need to store and retrieve such data in a database. The database community quickly reacted to these new requirements by providing models for semi-structured data and by integrating database research to XML web services and mobile computing. On the other hand, IS community who never than before faces problems of IS development is seeking for new

approaches to IS design. Ontology based approaches are gaining popularity, because of a need for shared conceptualisation by different stakeholders of IS development teams. Many web-based IS would fail without domain ontologies to capture meaning of terms in their web interfaces. This volume contains revised versions of 24 best papers presented at the 5th International Baltic Conference on Databases and Information Systems (BalticDB&IS'2002). The conference papers present original research results in the novel fields of IS and databases such as web IS, XML and databases, data mining and knowledge management, mobile agents and databases, and UML based IS development methodologies. The book's intended readers are researchers and practitioners who are interested in advanced topics on databases and IS.

These proceedings contain 27 papers, which are the peer-reviewed versions of presentations made at the International Association of Geodesy (IAG) symposium "Gravity, Geoid and Height Systems 2016" (GGHS2016). GGHS2016 was the first joint international symposium organized by IAG Commission 2 "Gravity Field", the International Gravity Field Service (IGFS) and the GGOS Focus Area "Unified Height System". It took place in Thessaloniki, Greece, in September 19-23, 2016 at the premises of the Aristotle University of Thessaloniki. The symposium was organized by the Department of Geodesy and Surveying of the Aristotle University of Thessaloniki, which presently hosts the IGFS Central Bureau. The focus of the Symposium was on methods for observing, estimating and interpreting the Earth gravity field as well as its applications. GGHS2016 continued the long and successful history of IAG's Commission 2 Symposia.

Mathematical optimization encompasses both a rich and rapidly evolving body of fundamental theory, and a variety of exciting applications in science and engineering. The present book contains a careful selection of articles on recent advances in optimization theory, numerical methods, and their applications in engineering. It features in particular new methods and applications in the fields of optimal control, PDE-constrained

optimization, nonlinear optimization, and convex optimization. The authors of this volume took part in the 14th Belgian-French-German Conference on Optimization (BFG09) organized in Leuven, Belgium, on September 14-18, 2009. The volume contains a selection of reviewed articles contributed by the conference speakers as well as three survey articles by plenary speakers and two papers authored by the winners of the best talk and best poster prizes awarded at BFG09. Researchers and graduate students in applied mathematics, computer science, and many branches of engineering will find in this book an interesting and useful collection of recent ideas on the methods and applications of optimization.

A lively NEW TRANSLATION of this anarchic children's classic alongside CLASSIC ORIGINAL ARTWORK. A nostalgia pick, 19th-Century sensibility but THE foundational classic of German children's literature. As irreverent as *The Cat in the Hat*, though 92 years older, and dark! *Max and Moritz* is perhaps the defining classic of German children's literature. In this darkly hilarious story, two young boys exercise their talent for ingenious mischief in a variety of dazzling tricks. Whether stealing a widow's chickens through her chimney or filling their teacher's pipe with gunpowder, *Max and Moritz* bring chaos and comedy wherever they go. Containing all of the original illustrations, this new translation by Mark Ledsom brings the original's rhyming couplets to vibrant life and promises to delight a new generation of young

readers.

In the past decades, much progress has been made in the field of walking robots. The current state of technology makes it possible to create humanoid robots that nearly walk like a human being, climb stairs, or avoid small - stacles. However, the dream of a robot running as fast and as elegantly as a human is still far from becoming reality. Control of such fast motions is still a big technological issue in robotics, and the maximum running speed of contemporary robots is still much smaller than that of human track runners. The conventional control approach that most of these robots are based on does not seem to be suitable to increase the running speeds up to a biological level. In order to address this challenge, we invited an interdisciplinary community of researchers from robotics, biomechanics, control engineering and applied mathematics to come together in Heidelberg at the Symposium "Fast Motions in Biomechanics and Robotics - Optimization & Feedback Control" which was held at the International Science Forum (IWH) on September 7-9, 2005. The number of participants in this symposium was kept small in order to promote discussions and enable a fruitful exchange of ideas.

This volume contains the proceedings from the COSPAR Colloquium on "Space Remote Sensing of Subtropical Oceans" which took place between 12 and 16 September, 1996, at the Institute of Oceanography of the National Taiwan University.

Included are contributions addressing the issue, from scientific points of views, of why the first scientific satellite of Taiwan, ROCSAT-1, should be equipped with the Ocean Colour Imager (OCI) for oceanographic investigations.

An authoritative, up-to-date graduate textbook on machine learning that highlights its historical context and societal impacts *Patterns, Predictions, and Actions* introduces graduate students to the essentials of machine learning while offering invaluable perspective on its history and social implications. Beginning with the foundations of decision making, Moritz Hardt and Benjamin Recht explain how representation, optimization, and generalization are the constituents of supervised learning. They go on to provide self-contained discussions of causality, the practice of causal inference, sequential decision making, and reinforcement learning, equipping readers with the concepts and tools they need to assess the consequences that may arise from acting on statistical decisions. Provides a modern introduction to machine learning, showing how data patterns support predictions and consequential actions Pays special attention to societal impacts and fairness in decision making Traces the development of machine learning from its origins to today Features a novel chapter on machine learning benchmarks and datasets Invites readers from all backgrounds, requiring some experience with probability, calculus, and linear algebra An essential textbook for students and a guide for researchers
