Percutaneous lumbar discectomy is a new surgical method for treating lumbar disc diseases. The goal of the procedure is decompression of the spinal nerve root by percutaneous removal of the nucleus pulposus under local anesthesia. Probably 20 % of all patients requiring lumbar disc surgery can be successfully treated by this method. During the past two years, percutaneous discectomy has spread rapidly, and it is now performed in most clinical departments engaged in spinal surgery. The first International Symposium on Percutaneous Lumbar Discectomy, held in Berlin in August 1988, covered all current procedures known as "percutaneous discectomy" and the entire range of percutaneous techniques, both clinical and experimental. Its publication is important because of the recency of this new surgical procedure, the outstanding experience of the speakers - including the Japanese, American, and European "pioneers" of the technique - and last but not least the gaps in the knowledge of physicians concerning this topic. This procedure opens up new perspectives in the surgical treatment of degenerative diseases of the lumbar spine.

This is the first book ever written for the defense on how to avoid runaway jury verdicts. I wrote this book because I care about fairness. I believe everyone has the right to a fair trial, not just plaintiff lawyers and their clients. Defendants are entitled to have a jury decide their case without being stirred with passion and bias by creative plaintiff lawyers. This is the defense "playbook" for justice. You will learn trial techniques to even the playing field for defendants seeking a fair trial. Every aspect of a civil jury trial will be covered, from voir dire to opening statements to witnesses and finally closing arguments. There is a formula for defeating plaintiff attorneys' deceptive tactics and psychological gamesmanship, and you will learn it. While full of 30 years of trial victories and personal experiences, this is a "how to" book. How to defend at trial. How to beat plaintiff attorneys at their own game. How to win. It is time to bring an end to the epidemic of nuclear verdicts across our country. It is time for you to take back justice for all! NUCLEAR VERDICTS MUST BE STOPPED! YOU CAN STOP THEM. RESPONSIBILITY. In every jury trial, accepting responsibility is not only the right thing to do, it is the most important thing you will do, no exceptions. Own what you did in every single jury trial, no excuses. REASONABLENESS. Be the most reasonable person in the courtroom. Do not take the typical defense approach of fighting every little thing. Show the jury you care, and they will return a verdict that is fair and just for all. COMMON SENSE. The ultimate equalizer in any case is common sense. It allows the jury to come to a conclusion that is fair and reasonable. You must go beyond the evidence and the law, and help the jury apply their common sense for a righteous verdict.

Welfare State Change Elsevier Health Sciences

The politics of the Third Way reflects an attempt by many contemporary social democracies to forge a new political settlement which is fitted to the conditions of a modern society and new global economy, but which retains the goals of social cohesion and egalitarianism. It seeks to differentiate itself as distinct from the political ideologies of the New Right and Old Left. Though commonly linked to the US Democratic Party in the Clinton era, it can also be traced to the political discourses in European social democratic parties during the mid-1990s, most notably in France, Germany, the Netherlands, and the United Kingdom. In social policy terms the model attempts to transcend the old alternatives of the state and the market. Instead, civil society, government, and the market are viewed as interdependent and equal partners in the provision of welfare, and the challenge for government is to create equilibrium between these three pillars. The individual is to be 'pushed' towards self-help, and independent, active citizenship, while business and government must contribute to economic and social cohesion. This book provides a comprehensive and critical analysis of 'Third Way' social policy and policy processes in the welfare systems of industrialized economies, and examines the extent to which 'Third Way' ideology and institutional structures converge or vary in different national settings. It examines substantive areas of public policy in a broad comparative context of key trends and debates. By assessing the extent to which the post-war social contract in developed welfare states is being renegotiated, the text contributes to a better understanding of the current restructuring and modernization of the State. Finally the book explores the implications of the new politics of welfare for theorizing inequality, social justice, and the future of welfare.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
