 This book takes an in-depth look at the phenomenon of police officer suicide. Centered on statistical information collected from cases of officer suicide from 2017 to 2019, this volume helps readers understand the circumstances surrounding death by suicide amongst law enforcement personnel and makes recommendations for identification and prevention. Through interview and case presentations, this volume examines the lives and last days and weeks of several officers, using findings from social media, departmental surveys, medical examiner reports, toxicology reports and interviews with loved ones and colleagues to create a psychological autopsy. With 14 chapters contributed by former law enforcement, researchers, and mental health professionals, it addresses national, state, and local policy implications and strategies, presenting a theory for better understanding and preventing the phenomenon of officer suicide. This volume will be of interest to researchers in policing, to law enforcement and first responder leadership and administrative professionals, and to mental health practitioners and clinicians working with this unique population

 For readers of Atul Gawande, Siddhartha Mukherjee, and Henry Marsh, a riveting, gorgeously written biography of one of history's most fascinating and confounding diseases -- Alzheimer's -- from its discovery more than 100 years ago to today's race towards a cure. Alzheimer's is the great global epidemic of our time, affecting millions worldwide -- there are more than 5 million people diagnosed in the US alone. And as our population ages, scientists are working against the clock to find a cure. Neuroscientist Joseph Jellini is among them. His beloved grandfather had Alzheimer's and now he's written the book he needed then -- a very human history of this frightening disease. But In Pursuit of Memory is also a thrilling scientific detective story that takes you behind the headlines. Jellini's quest takes us from nineteenth-century Germany and post-war England, to the jungles of Papua New Guinea and the technological proving grounds of Japan; through America, India, China, Iceland, Sweden, and Colombia. Its heroes are scientists from around the world -- many of whom he's worked with -- and the brave patients and families who have changed the way that researchers think about the disease. This compelling insider's account shows vividly why Jellini feels so hopeful about a cure, but also why our best defense in the meantime is to understand the disease. In Pursuit of Memory is a clever, moving, eye-opening guide to the threat one in three of us faces now.

Cu-RE Your Fatigue: The Root Cause and How To Fix It On Your Own McGraw Hill Professional
 Every pianist needs a book of exercises to help them develop technical skills needed to perform any type of music from classical to jazz and pop to rock. Carl Czerny is considered the founder of modern piano technique, and using the Czerny-Schaum exercises will improve piano technique for all late elementary to early intermediate students. The Czerny-Schaum edition is based on selections from Op. 599, Op. 139, Op. 821, Op. 718, Op. 636, and Op. 261. The objective is to bring together excerpts that stress many varieties of technical problems. Special emphasis is placed on equal development of both hands and the technical points are equally divided between the right and the left hands. Using the Czerny-Schaum exercises will improve piano technique for all late elementary to early intermediate students.

In their original form most of the Haydn compositions are usable by only very gifted musicians. In compiling this book Mr. Schaum has kept in mind the ideal of democratizing Haydn's music by making his oratorios, cantatas, songs, and symphonies playable for the average pianist. Through changed titles, the pupil gains a historical background while the biographical additions add color and charm. Only dependable references were used for the biographical data, and, as far as is known, it is historically true. Book 1 is to be used with the Schaum B Book and Adult II. Book 2 is to be used with the Schaum F Book.

Based on Events and Episodes in the life of Johann Sebastian Bach, this Late Elementary piano collection may be used as supplementary literature with any piano method. Many of Bach's pieces were named as Preludes, Sarabandes, Minuets, Arias, and other titles relating to the form of the composition. Mr. Schaum has chosen titles from authentic episodes in Bach's life and applied them to his music. The appropriate captions add color and life to the music, the biographical sketches add musical appreciation, and Mr. Schaum's arrangements make teaching easier.

Diatoms are the most species rich group of algae, and they contribute about 20% of annual global carbon fixation. They play major roles in ocean food webs and global biogeochemical cycles. They are also a target of the biotechnology industry because of their nano-patterned silica cell wall and high lipid content. Diatoms have received increasing attention as more genomes became available and because of the development of genome editing tools such as the CRISPR/Cas9 technology, which has made diatoms as genetically tractable as well-established biological model species. This book provides an overview on diatom molecular biology. It brings together international leading experts in the field to discuss the latest data and developments from genes to ecosystems. As the understanding of diatoms is currently experiencing a step change, it is critical to allow for synergistic approaches on diverse aspects of diatom biology and evolution. The book offers fundamental insights into the molecular life of diatoms; at the same time new scientific concepts are developed based on the application of the latest molecular tools and genomic information to explore the fascinating lifestyle of diatoms.

This book analyzes the errors most commonly made in spoken and written English and presents them in a systematic, down-to-earth manner. It does not dictate grammar to the reader; rather, it presents the guidelines for English usage currently being observed by the most competent and careful speakers and writers. The most troublesome words and phrases—as well as grammatical terms—are listed alphabetically within 18 subject areas to enable the reader to check quickly on questions of usage. In each case, illustrative examples are given, and the guiding principle is stated for the reader to follow in avoiding the mistake and others similar to it. An extensive index for additional ease of reference helps make this book a handy tool for the modern reader who realizes that mere knowledge is no longer sufficient—that one must be able to express his knowledge clearly, forcefully, and correctly.

The leading cause of death on Planet Earth is Metabolic Syndrome. Some 40% of all Earthlings now suffer from this condition which covers the gamut of Heart Disease, Cancer, Neurodegeneration, Liver disease, and PCOS. What is worth knowing is that ALL of these and related conditions start with Fatigue, known in scientific circles as "energy deficiency." 40% of the Earth's population has a formal clinical diagnosis that their mitochondria cannot make adequate levels of energy. [Cu]re Fatigue is a book devoted to educating the masses and their doctors exactly how and why this is happening. Our mitochondria make energy by a series of enzymes to work synergistically to create ATP, the cellular currency of energy. These mitochondrial enzyme reactions rely on minerals that are easily lost to stress. This book explains these concepts, how these challenges can be overcome and introduces the reader to a simple, proven Root Cause Protocol that is designed to generate more energy and end fatigue. This book is designed for those seeking the truth in human metabolism and those wanting to take back control of their health. It is one part textbook and one part user's guide based on a decade of research and client experience.
