Pattern Cutting Techniques for Ladies' Jackets Laurence King Publishing

The term 'tailored' has changed as methods of manufacture and the retailing of clothes have evolved. This book demonstrates the wide range of cutting methods used to produce garments which are described as 'tailored' jackets. Although the main focus is on modern methods of producing clothing, a rich and complex cutting tradition is acknowledged and used. It is hoped that the modern garment designer will be inspired to rediscover methods that retain their validity today. The different approaches to 'tailored' cutting are described under three headings: bespoke cutting, engineered cutting and style cutting. The rich heritage of the latter came from the tremendous creativity that was unleashed by women's emancipation at the beginning of the twentieth century and the merging of tailored styles with fashionable clothing. The section on style cutting has therefore derived some of the cutting techniques from that period, thus demonstrating how they can be applied to current methods of production.

Each period in the history of costume has produced its own characteristic line and silhouette, derived from a cut and construction which varies considerably from age to age. Here are patterns taken from actual dresses, many of them rare museum specimens, illustrated by sketches of the dresses. There are notes on the production of women's dress, with references to early technical books and journals, together with diagrams from some of them. Numerous illustrations show the dresses as worn complete with their hairstyles, jewelry, decorations and accessories.

Since the first edition was published in 1980, Metric Pattern Cutting for Menswear has become established as the standard work on this subject and has proved invaluable as both a textbook for students and a reference source for the practising designer. In this fifth edition, the chapter on computer aided design now has full colour illustrations and reflects the growing importance of CAD to the industry and as a part of fashion and design courses. The rest of the book has been updated where necessary: in particular, new blocks for tailored shirts, new details on how to adapt men's blocks for women's wear, and a revision of sizing and labelling information. Colour is now used to differentiate the main groups of patterns and with its tried and tested layout with clear text and diagrams, Metric Pattern Cutting for Menswear is an essential purchase for students of fashion and design.

Stylish Dress Book Wiley-Blackwell

This fourth edition of Metric Pattern Cutting for Children's Wear and Babywear remains the standard text book but has three major improvements. First, the sections have been re-organised to reflect changes in producing and marketing children's clothes. Today's popularity of easy-fitting styles and knitted fabrics means that basic 'flat' pattern cutting is used to construct the majority of children's wear and babywear and this type of cutting is therefore emphasised in this new edition. Shaped blocks and garments, cut to fit the body form, are still included, and are placed in chapters covering some school uniform garments or more expensive fashion or formal clothes. The book now clearly separates the sections useful to student beginners (Parts One, Two and Three), and also offers more advanced or specialist sections for students who wish to pursue a career in children's wear or for designers working in the different manufacturing sectors of the trade. The second change in this fourth edition is the introduction of colour coding to the sections; this makes it easier to identify specific processes in the book and enhances the illustrations. Finally, the size charts have been revised to reflect the changes in body sizing. The clear division of the boys' and girls' measurements in the charts has been in response to the way clothes are marketed and to co-ordinate with European size charts. 'Plus' charts for heavier children have also been added.

Containing 2,729 entries, Kevin L. Seligman's bibliography concentrates on books, manuals, journals, and catalogs covering a wide range of sartorial approaches over nearly five hundred years. After a historical overview, Seligman approaches his subject chronologically, listing items by century through 1799, then by decade. In this section, he deals with works on flat patterning, draping, grading, and tailoring techniques as well as on such related topics as accessories, armor, civil costumes, clerical costumes, dressmakers' systems, fur, gloves, leather, military uniforms, and undergarments. Seligman then devotes a section to those American and English journals published for the professional tailor and dressmaker. Here, too, he includes the related areas of fur and undergarments. A section devoted to journal articles features selected articles from costume- and noncostumerelated professional journals and periodicals. The author breaks these articles down into three categories: American, English, and other. Seligman then devotes separate sections to other related areas, providing alphabetical listings of books and professional journals for costume and dance, dolls, folk and national dress, footwear, millinery, and wigmaking and hair. A section devoted to commercial pattern companies, periodicals, and catalogs is followed by an appendix covering

pattern companies, publishers, and publications. In addition to full bibliographic notation, Seligman provides a library call number and library location if that information is available. The majority of the listings are annotated. Each listing is coded for identification and cross-referencing. An author index, a title index, a subject index, and a chronological index will guide readers to the material they want. Seligman's historical review of the development of publications on the sartorial arts, professional journals, and the commercial paper pattern industry puts the bibliographical material into context. An appendix provides a cross-reference guide for research on American and English pattern companies, publishers, and publications. Given the size and scope of the bibliography, there is no other reference work even remotely like it.
