Creep-resistant steels are widely used in the petroleum, chemical and power generation industries. Creep-resistant steels must be reliable over very long periods of time at high temperatures and in severe environments. Understanding and improving long-term creep strength is essential for safe operation of plant and equipment. This book provides an authoritative summary of key research in this important area. The first part of the book

describes the specifications and manufacture of creep-resistant steels. Part two covers the behaviour of creep-resistant steels and methods for strengthening them. The final group of chapters analyses applications in such areas as turbines and nuclear reactors. With its distinguished editors and international team of contributors, Creep-resistant steels is a valuable reference for the power generation, petrochemical and other industries which use high strength steels at elevated temperatures. Describes the specifications and manufacture of creep-resistant steels Strengthening methods are discussed in detail Different applications are analysed including turbines and nuclear reactors

In recent years, the field of tissue engineering has begun, in part, to c- lesce around the important clinical goal of developing substitutes or repla- ments for defective tissues or organs. These efforts are focused on many tissues including skin, cartilage, liver, pancreas, bone, blood, muscle, the vascu- ture, and nerves. There is a staggering medical need for new and effective treatments for acquired as well as inherited defects of organs/tissues. Tissue engineering is at the interface of the life sciences, engineering, and clinical medicine and so draws upon advances in cell and molecular biology, mate- als sciences, and surgery, as well as chemical and mechanical engineering. Such an interdisciplinary field requires a broad knowledge base as well as the use of a wide assortment of methods and approaches. It is hoped that by bringing together these protocols, this book will help to form connections - tween the different disciplines and further stimulate the synergism underlying the foundation of the tissue engineering field.
