 The first and only coloring book based on the art of the beloved and acclaimed painter and television personality. This exclusive authorized collection of art, derived directly from Bob Ross's own paintings, offers his legions of fans a contemplative, relaxing, and inspiring way to connect with the work and personality of the pop-culture icon. Featuring many of Ross's most famous quotes and catchphrases about happy little trees, friendly squirrels, and more, the book also includes a gallery of his original artwork. But as he would no doubt want, coloring fans of all ages are encouraged to make their own decisions, embrace their mistakes, and make each painting their own. Bob Ross is a cult figure around the world among varying age groups, especially Generation X. And everyone agrees he is about more than just

painting. His fans—few of whom identify themselves as artists—agree that his quiet, nurturing disposition is a form of therapy, making his work the absolutely perfect subject of an adult coloring book. This coloring book presents more than seventy-five line drawings created from Ross's own artwork.

Academic institutions are facing a crisis in scholarly publishing at multiple levels: presses are stressed as never before, library budgets are squeezed, faculty are having difficulty publishing their work, and promotion and tenure committees are facing a range of new ways of working without a clear sense of how to

understand and evaluate them. *Planned Obsolescence* is both a provocation to think more broadly about the academy's future and an argument for re-conceiving that future in more communally-oriented ways. Facing these issues head-on, Kathleen Fitzpatrick focuses on the technological changes especially greater utilization of internet publication technologies, including digital archives, social networking tools, and multimedia necessary to allow academic publishing to thrive into the future. But she goes further, insisting that the key issues that must be addressed are social and institutional in origin. Confronting a change-averse academy, she insists that before we can successfully change the systems through which we disseminate research, scholars must re-evaluate their ways of working how they research, write, and review while administrators must reconsider the purposes of publishing and the role it plays within the university. Springing from original research as well as Fitzpatrick's own hands-on experiments in new modes of scholarly communication through MediaCommons, the digital scholarly network she co-founded, *Planned Obsolescence* explores all of these aspects of scholarly work, as well as issues surrounding the preservation of digital scholarship and the place of publishing within the structure of the contemporary university. Written in an approachable style designed to bring administrators and scholars into a conversation, *Planned Obsolescence* explores both symptom and cure to ensure that scholarly communication will remain vibrant and relevant in the digital future.

The contributions in this book highlight, contextualize and analyze different aspects of social inequality. What are the various cause and effects of inequality? How have these changed over recent decades? Which social policies might be best able to intervene? Written by authors from a variety of disciplines and geographical regions, these contributions provide a rich account of inequality within contemporary society. The role of the state, the media and the market in exacerbating and alleviating patterns of equality are all accessed alongside analysis of changing patterns of exclusion and hierarchy.

C-XSC is a tool for the development of numerical algorithms delivering highly accurate and automatically verified results. It provides a large number of predefined numerical data types and operators. These types are implemented as C++ classes. Thus, C-XSC allows high-level programming of numerical applications in C and C++. The most important features of C-XSC are: real, complex, interval, and complex interval arithmetic; dynamic vectors and matrices; subarrays of vectors and matrices; dot precision data types, predefined arithmetic operators with maximum accuracy; standard functions of high accuracy; multiple precision arithmetic and standard functions; rounding control for I/O data; error handling, and library of problem solving routines with automatic result verification. Thus, C-XSC makes the computer more powerful concerning the arithmetic. C-XSC is immediately usable by C programmers, easy to learn, user-extendable, and may also be combined with other tools. The book can be used as a textbook and as a reference manual. It consists of an introduction to advanced computer arithmetic, a chapter describing the programming languages C and C++, the major chapter "C-XSC Reference", sample programs, and indices.

On Reading Books to Children: Parents and Teachers brings together in one volume current research on adult book reading to children. The authors, drawn from around the world, are key researchers and eminent scholars from the fields of reading and literacy, child language, speech pathology, and psychology, representing multiple perspectives within these disciplines. Chapters on the effects and limitations of book sharing are integrated with chapters discussing promising programs on storybook research. The reality of reading to children is more complex than it appears on the surface. The authors discuss some effects of and suggestions for reading to children that have emerged from the research. The ideas set forth in this volume will stimulate new lines of research on the effects of storybook reading, as well as refinements of current methods, yielding findings that enrich our understanding of this important arena of literacy development.

Convergence has gained an enormous amount of attention in media studies within the last several years. It is used to describe the merging of formerly distinct functions, markets and fields of application, which has changed the way companies operate and consumers perceive and process media content. These transformations have not only led business practices to change and required companies to adapt to new conditions, they also continue to have a lasting impact on research in this area. This book's main purpose is to shed some light on crucial phenomena of media and convergence management, while also addressing more specific issues brought about by innovations related to media, technologies, industries, business models, consumer

behavior and content management. This book gathers insights from renowned academic researchers and pursues a highly interdisciplinary approach. It will serve as a valuable reference guide for students, practitioners and researchers interested in media convergence processes.

Metaphors in audiovisual media receive increasing attention from film and communication studies as well as from linguistics and multimodal metaphor research. The specific media character of film, and thus of cinematic metaphor, remains, however, largely ignored. Audiovisual images are all too frequently understood as iconic representations and material carriers of information. Cinematic Metaphor proposes an alternative: starting from film images as affective experience of movement-images, it replaces the cognitive idea of viewers as information-processing machines, and heals the break with rhetoric established by conceptual metaphor theory. Subscribing to a phenomenological concept of embodiment, a shared vantage point for metaphorical meaning-making in film-viewing and face-to-face interaction is developed. The book offers a critique of cognitive film and metaphor theories and a theory of cinematic metaphor as performative action of meaning-making, grounded in the dynamics of viewers' embodied experiences with a film. Fine-grained case studies ranging from Hollywood to German feature film and TV news, from tango lesson to electoral campaign commercial, illustrate the framework's application to media and multimodality analysis.

Digital practices are shaped by graphical representations that appear on the computer screen, which is the principal surface for designing, visualizing, and interacting with digital information. Before any digital image or graphical interface is rendered on the screen there is a series of layers that affect its visual properties. To discover such processes it is necessary to investigate software applications, graphical user interfaces, programming languages and code, algorithms, data structures, and data types in their relationship with graphical outcomes and design possibilities. This book studies interfaces as images and images as interfaces. It offers a comprehensible framework to study graphical representations of visual information. It explores the relationship between visual information and its graphical supports, taking into account contributions from fields of visual computing. Graphical supports are considered as material but also as formal aspects underlying the representation of digital images on the digital screen.

Digital technology has radically altered the way in which we live and work, but has not had a substantial impact on education. Ubiquitous Computing in Education explores the educational potential of ubiquitous computing initiatives that make digital tools available to students and teachers. Combining theory, research, and practice, this volume paints a broad picture of the field of ubiquitous computing in education, which focuses on the availability of digital tools for teachers and students to use anywhere and anytime to support teaching and learning. The book illustrates how to use theory and research to enhance technology integration, teaching practices, and student achievement. The significance of ubiquitous computing for teaching and learning is highlighted, as the text discusses why it is important, what it looks like, what the research tells us about it, and how ubiquitous computing can work in different types of learning environments today and in years to come. This book is of interest to researchers and graduate students in educational technology, as well as teachers, administrators, policymakers, and industry leaders who can use the text to make essential decisions related to their respective roles in education.
