Clinical Assessment Workbook: Balancing Strengths and Differential Diagnosis

Butterworth-Heinemann

A GUIDE TO CLINICAL ASSESSMENT AND PROFESSIONAL REPORT WRITING IN SPEECH-LANGUAGE PATHOLOGY, 1E not only provides guidance for the often overwhelming process of assessing speech and language disorders but also offers robust diagnostic report writing tools in one user-friendly resource. Organized by disorder, this book is the only one to provide a sample report for each of the major communicative disorders discussed. It also includes a chapter devoted to basic report writing skills and grammar. The assessment aspects of the book offer an in-depth chapter on counseling, a detailed and comprehensive chapter on dysphasia for both pediatric and adult populations, and a clear and practical chapter on assessment of accent. Each chapter is written by experts in their area of communication disorders and provides the following information: background and characteristics of the disorder; parameters for assessment; pertinent interview questions; an inventory and explanation of relevant formal and informal assessment measures in narrative and table format; a section on differential diagnosis to assist in teasing out the specific problem; and a sample case history with assessment tools chosen for that vignette along with rationale for making such selections. All this information is woven into a sample diagnostic report and a similar assignment is provided for practice, making this an ideal resource for ESL learners as well as students preparing for the praxis. Every chapter includes a list of key vocabulary and a glossary to familiarize your students with the professional vernacular relevant for writing diagnostic reports.

Clinical Examination Skills for Healthcare Professionals McGraw-Hill Medical

The MRCP examination is constantly changing, reflecting the changing pressures on doctors in training. Whilst the MRCP PACES examination has evolved with the times, the core ethos of it, to act as a benchmark for sound clinical examination, logical diagnostic ability, common sense and most importantly, the development of compassionate and ethical physicians has remained unchanged. Whilst this exam has often struck fear into the hearts of junior doctors, we believe it is an assessment of progression during a physician's training that should be relished as an opportunity to demonstrate these ageless qualities that caring practitioners should possess. This book was born out of the philosophy that all doctors sitting their MRCP PACES already have the knowledge and skill

to pass the exam, but just require guidance in the correct logical approach that the Royal College is looking for. The book has, therefore, quite unlike other MRCP PACES books, avoided any attempts at being a definitive text. Rather, it has focused on the key aspects that the authors believe are required to pass the examination, in particular focus on presentation style. Whilst medicine is indeed an ocean, the most commonly examined topics have been selected to reflect the likely scenarios a candidate will face — as the old adage goes — 'common things occur commonly'. In producing this book, extensive feedback was sought from candidates revising for the examination to reflect their needs. The layout therefore involves a methodical approach with a short introduction, similar to that presented in the exam, followed by clinical findings expected to be found. An example of presentation style has then been produced to allow the candidate to rehearse and practice this essential component of the exam. Doctors preparing for the exam have limited time due to busy work schedules. Therefore, summary books are key for candidates sitting the MRP PACES examination. Most PACES candidates fail the exam based on history and communication stations. Therefore, attention has been paid to:

Autism spectrum disorder has received increasing research in recent years, with more information on assessment and treatment than can be readily assimilated from primary literature by clinicians. Clinical Assessment and Intervention for Autism Spectrum Disorders summarizes evidence-based assessments and intervention for Autism across the life-span, providing clinicians with a practical

overview of how best to assess and treat this disorder. The book begins with a discussion of what warrants a determination of being "evidence based" and a description of the disorder from a life span perspective. The book also provides a chapter on differential diagnosis of autism relative to other disorders. What follows are separate sections on assessment and intervention. These chapters discuss first how to assess and then separately how to treat behavioral problems, communication and social skills issues, academic and vocational skills, and the use of pharmacology and an assessment of possible pharmacological effects. Intended for practitioners assessing and treating children with developmental delays, the book provides clinicians with best practices for assessing and treating delays associated with autism. THE 10-MINUTE CLINICAL ASSESSMENT Clinical assessment is at the heart of medicine. Health professionals working in busy clinical settings, such as general practitioners, nurse practitioners and hospital doctors on-call, often have to assess patients under considerable time constraints. This book teaches the reader how to gather clinical information effectively, accurately and safely even when time is at a premium. Using a focused and evidence-based approach, it provides step-by-step assessment strategies for common and important clinical scenarios, particularly those that require 'lateral' and holistic thinking, such as falls in the elderly, weight loss, 'tired all the time' and assessment of diabetic or homeless people. This second edition of The 10-Minute Clinical Assessment is fully updated in line with the latest guidelines and includes brand new general chapters on focused clinical assessment, red flags, and useful consultation tools. It covers a wide range of common and important topics, including cardiovascular, respiratory, haematology, musculoskeletal, neurology, mental health, gynaecology, obstetrics, urology, ophthalmology and ear, nose and throat. This new edition also includes sections on undifferentiated and miscellaneous presentations, on paediatrics and adolescent health; and on problems in older people. Each of the individual disease sections is uniformly structured to provide rapid reference, including: Key features of the history, including questions relevant to patients and important for making a diagnosis Common patient ideas, concerns and expectations The 'value' of present or absent symptoms for diagnosis and prognosis What should be examined, and why A summary of 'red flags' - issues that must be assessed Important differential diagnoses and their clinical features Useful tips, tricks and hints for effective patient assessment Written by an experienced medical educator and practicing GP, in consultation with a multidisciplinary team of medical students, GPs, PG trainees, hospital doctors and nurses, this title specifically covers the clinical skills assessment (CSA) part of the

Membership of the Royal College of General Practitioners (RCGP) examination. New to this edition is a refreshed approach to the methodology employed in clinical assessment, to reflect recent trends in the teaching of clinical assessment. This edition also includes the latest evidence-based recommendations (including the latest NICE guidelines) and recent developments in order to provide the reader with a concise yet comprehensive resource for clinical reference.

Many published books that comment on the medical model have been written by doctors, who assume that readers have the same knowledge of medicine, or by those who have attempted to discredit and attack the medical practice. Both types of book have tended to present diagnostic categories in medicine as universally scientifically valid examples of clear-cut diseases easily distinguished from each other and from health; with a fixed prognosis; and with a well-understood aetiology leading to disease-reversing treatments. These are contrasted with psychiatric diagnoses and treatments, which are described as unclear and inadequate in comparison. The *Medical Model in Mental Health: An Explanation and Evaluation* explores the overlap between the usefulness of diagnostic constructs (which enable prognosis and treatment decisions) and the therapeutic

effectiveness of psychiatry compared with general medicine. The book explains the medical model and how it applies in mental health, assuming little knowledge or experience of medicine, and defends psychiatry as a medical practice.
