Recent political, religious, ethnic, and racial conflicts, as well as mass disasters, have significantly helped to bring to light the almost unknown discipline of forensic anthropology. This science has become particularly useful to forensic pathologists because it aids in solving various puzzles, such as identifying victims and documenting crimes. On topics such as mass disasters and crimes against humanity, teamwork between forensic pathologists and forensic anthropologists has significantly increased over the few last years. This relationship has also improved the study of routine cases in local medicolegal institutes. When human remains are badly decomposed, partially skeletonized, and/or burned, it is particularly useful for the forensic pathologist to be assisted by a forensic anthropologist. It is not a one-way situation: when the forensic anthropologist deals with skeletonized bodies that have some kind of soft tissue, the advice of a forensic pathologist would be welcome. Forensic anthropology is a subspecialty/field of physical anthropology. Most of the background on skeletal biology was gathered on the basis of skeletal remains

from past populations. Physical anthropologists then developed an indisputable "know-how"; nevertheless, one must keep in mind that looking for a missing person or checking an assumed identity is quite a different matter. Pieces of information needed by forensic anthropologists require a higher level of reliability and accuracy than those granted in a general archaeological context. To achieve a positive identification, findings have to match with evidence, particularly when genetic identification is not possible.

Orlin have added more case studies and video clips, additional chapters and Medline-linked references online, and Evidence to Practice boxes to make it easy to find and remember important information. Teaching the Indian Child Peterson's "Forgive yourself for not having the foresight to know what now seems so obvious in hindsight." -Judy Belmont How often have you caught yourself saying "I wish I knew that" or "If only they knew..."? We have all been there. We can always look back and wish that we could change something, but the key is to use that knowledge and make a difference now. We learn from reflecting on our own experiences and by connecting with other educators to learn from theirs. In *Things I Wish [...] Knew*, Rachelle Dené Poth has brought in fifty educators with different experiences and backgrounds in education to share something they wish they or others knew. Each vignette shares an eye-opening experience, a valuable lesson learned, advice for overcoming challenges, or simply offers some inspiration or words of wisdom. Throughout this book, you will learn from educators who hope to help others make a difference, to make some changes in their practice, and to avoid missing out on opportunities. The book explores things that each educator wishes they knew when they started teaching, something they wish that administrators knew, or things that they wish all students knew. I hope that this book will lead you to reflect on your own practice and inspire you to share your story too.

"This book is the result of a study in which the authors identified all of the American women who earned PhD's in mathematics before 1940, and collected extensive biographical and bibliographical information about each of them. By reconstructing as complete a picture as possible of this group of women, Green and LaDuke reveal insights into the larger scientific and cultural communities in which they lived and worked." "The book contains an extended introductory essay, as well as biographical entries for each of the 228 women in the study. The authors examine family backgrounds, education, careers, and other professional activities. They show that there were many more women earning PhD's in mathematics before 1940 than is commonly thought." "The material will be of interest to researchers, teachers, and students in mathematics, history of mathematics, history of science, women's studies, and sociology."--BOOK JACKET.
