Admirer in the*

Caucasus is a gripping account of the developmental dynamics involved in the collapse of Soviet socialism. Fusing a narrative of human agency to his critical discussion of structural forces, Georgi M. Derlugian reconstructs from firsthand accounts the life story of Musa Shanib—who from a small town in the Caucasus grew to be a prominent

leader in the Chechen revolution. In his examination of Shanib and his keen interest in the sociology of Pierre Bourdieu, Derluguian discerns how and why this dissident intellectual became a nationalist warlord. Exploring globalization, democratization, ethnic identity, and international terrorism, Derluguian contextualizes Shanib's personal trajectory from de-

Stalinization through the nationalist rebellions of the 1990s, to the recent rise in Islamic militancy. He masterfully reveals not only how external economic and political forces affect the former Soviet republics but how those forces are in turn shaped by the individuals, institutions, ethnicities, and social networks that make up those societies. Drawing on the work of Charles Tilly,

Immanuel Wallerstein, and, of course, Bourdieu, Derluguian's explanation of the recent ethnic wars and terrorist acts in Russia succeeds in illuminating the role of human agency in shaping history. National Indicator Framework (NIF) on Education for Bangladesh Cornell University Press As global climate change proliferates, so too do the health risks

associated with the changing world around us. Called for in the President's Climate Action Plan and put together by experts from eight different Federal agencies, *The Impacts of Climate Change on Human Health: A Scientific Assessment* is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration

Impacts of extreme events on human health Vector-borne diseases Climate impacts on water-related Illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and charts. Learn what health risks face you

and your family as a result of global climate change and start preparing now with *The Impacts of Climate Change on Human Health. Sufis, Salafis and Islamists* CRC Press The dream of automatic language translation is now closer thanks to recent advances in the techniques that underpin statistical machine translation. This class-tested

textbook from an active researcher in the field, provides a clear and careful introduction to the latest methods and explains how to build machine translation systems for any two languages. It introduces the subject's building blocks from linguistics and probability, then covers the major models for machine translation: word-based, phrase-based, and tree-based, as well

as machine translation evaluation, language modeling, discriminative training and advanced methods to integrate linguistic annotation. The book also reports the latest research, presents the major outstanding challenges, and enables novices as well as experienced researchers to make novel contributions to this exciting area. Ideal for students at undergraduate and

graduate level, or for anyone interested in the latest developments in machine translation. Management for Sustainable Development Pluto Press (UK) The Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the

scientific basis of human-induced climate change, its impacts and future risks, and options for adaptation and mitigation. This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a

focus on resilience, risk management response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested

parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core. **Toxins in Food** Cambridge University Press This country analytical review examines the key issues in access to and participation in primary and secondary education in Bangladesh, with a special focus on areas and dimensions of

exclusion. Against a background of overall progress, particularly in closing the gender gap in primary and secondary enrollment, the research applies a conceptual framework outlining different forms of exclusion and presents two significant findings which compromise access and diminish gains made: high dropout rates at primary and secondary levels and nominal access but virtual exclusion from quality learning. Other areas surveyed in the review include interventions by public sector and non-governmental providers in primary and secondary education as well as the financing of basic education. This review of the literature concludes with suggestions for future research directions that might lead to new understanding and insights on equitable access and participation. Nine annexes are included: (1) A schematic of the education system in Bangladesh; (2) Eleven types of primary schools; (3) Comparison between BRAC [Bangladesh Rural Advancement Committee] and government primary school models; (4) Achievement of BEP [BRAC Education Programme] as of November 2005; (5)

<p>Training completed for secondary school teachers of PACE programme as of November 2005; (6) ESP [Education Support Programme] accomplishments, actual and planned; (7) PLAN [Post Primary Basic and Continuing Education] Bangladesh Whole Child Development Model; (8) Total centres and beneficiaries of Save the Children USA--core programmes; and (9)</p>	<p>Projection of child and student population. A bibliography is included. (Contains 44 tables and 15 figures.) [This review was written with the assistance of Altaf Hossain, Md. Abul Kalam, Md. Shahidul Islam and Jennifer Hove.]. <i>Village Swaraj</i> Baen Books Human skin cancers, the most common type of tumors, represent a significant health burden. The deadliest is unquestionabl</p>	<p>y melanoma. Half of melanomas have an activating mutation in the BRAF gene, prompting development of novel drugs, vemurafenib and dabrafenib, specifically targeting mutated BRAF. Trametinib and cobimetinib, which block MEK, a BRAF effector protein, have been used in combination with BRAF inhibitors. A promising new melanoma</p>
---	---	--

treatment is immunotherapy, approach that boosts patient's own immune system to attack cancer. Pembrolizumab and nivolumab inhibit PD-1, whereas Ipilimumab targets CTLA-4, another immunity check point, to boost the immune response. Here we focus on pathways, mechanisms, targets and treatments of human skin cancers, with particular emphasis on the new

developments in the research on melanomas. The Technology Acceptance Model CRC Press British Muslim activism has evolved constantly in recent decades. What have been its main groups and how do their leaders compete to attract followers? Which social and religious ideas from abroad are most influential? In this groundbreaking study, Sadek

Hamid traces the evolution of Sufi, Salafi and Islamist activist groups in Britain, including The Young Muslims UK, Hizb ut-Tahrir, the Salafi JIMAS organisation and Traditional Islam Network. With reference to second-generation British Muslims especially, he explains how these groups gain and lose support, embrace and reject foreign ideologies, and succeed and fail to

provide youth with compelling models of British Muslim identity.

Analyzing historical and firsthand community research, Hamid gives a compelling account of the complexity that underlies reductionist media narratives of Islamic activism in Britain.

Drug Delivery Systems CRC Press

While systems such as GMP and HACCP assure a high standard of food quality, foodborne

poisonings still pose a serious hazard to the consumer's health. The lack of knowledge among some producers and consumers regarding the risks and benefits related to food makes it imperative to provide updated information in order to improve food safety. To

Sociology of Diaspora BoD

- Books on Demand
This volume provides the most up-to-date analysis of the ethnic cleansing of

the Crimean Tatars, their exile in Central Asia and their struggle to return to the Crimean homeland. It also traces the formation of this diaspora nation from Mongol times to the collapse of the Soviet Union. A theme which emerges through the work is the gradual construction of the Crimea as a national homeland by its indigenous Tatar population. It ends with a discussion of the post-

Soviet repatriation of the Crimean Tatars to their Russified homeland and the social, emotional and identity problems involved.

Diarrhea

Springer
Although prayerfulness and the remembrance of God suffuse all the formal practices of Islam, there are times when the Muslim simply 'sits alone with his Lord' to repeat formulas drawn from the Qur'an and the sayings of the

Prophet, seeking remission of his sins and the purification of his heart. The present volume is probably the most widely read compendium of such material, popular not only for its comprehensiveness and beauty, but also for the analytical approach of its author, who explores the psychological and spiritual effects of prayer and the celebration of God's name.

The original translation by Kojiro Nakamura, now Head of the Islamic Studies Department at the University of Tokyo, has been substantially revised and augmented with 'hadith' identification. *Bourdieu's Secret Admirer in the Caucasus* Cambridge University Press
"This is the first complete English translation of the Book of Love, Longing, Intimacy and Contentment, the thirty-sixth

<p>chapter of Abū Hāmid al-Ghazālī's monomuntal Revival of the Religious Sciences ... The Book of Love ... is of fundamental importance in the history of Islamic thought and in the development of Sufism."--P. [4] of cover.</p> <p>Statistical Machine Translation</p> <p>Simon and Schuster Summary: This publication contains the twelve papers presented at a full-day technical session</p>	<p>sponsored by the American Concrete Insitute. The subject matter of these papers includes: (1) the development of concrete properties and microstructure at early ages, (2) test methods for assessing early-age volume change and cracking potential, (3) construction operations timing, (4) computer simulations of early-age behavior, and (5) mechanisms that end the</p>	<p>concrete dormant period. <u>Year Book of the Academy</u> Springer Nature This book summarizes current advances in our understanding of how infectious disease represents an ecological interaction between a pathogenic microorganism and the host species in which that microbe causes illness. The contributing authors explain that pathogenic</p>
---	--	--

microorganisms often also have broader ecological connections, which can include a natural environmental presence; possible transmission by vehicles such as air, water, and food; and interactions with other host species, including vectors for which the microbe either may or may not be pathogenic. This field of science has been dubbed disease ecology, and the chapters

that examine it have been grouped into three sections. The first section introduces both the role of biological community interactions and the impact of biodiversity on infectious disease. In turn, the second section considers those diseases directly affecting humans, with a focus on waterborne and foodborne illnesses, while also examining the critical aspect of microbial

biofilms. Lastly, the third section presents the ecology of infectious diseases from the perspective of their impact on mammalian livestock and wildlife as well as on humans. Given its breadth of coverage, the volume offers a valuable resource for microbial ecologists and biomedical scientists alike. **Anthropology of Unemployment World Scientific** This volume

provides an in-depth look at the genetic influences that contribute to the development of alcoholism. Part I: Epidemiologic Studies contains five chapters that examine the various approaches employed in the study of the genetics of alcoholism. It provides a historical perspective and details all the essentials of this subject. Part II: Selective Breeding Studies highlights the

results of research involving the selective breeding of rodents. This type of research has produced homogenous strains exhibiting specific behavioral responses considered significant in the development and maintenance of alcohol dependence. The studies presented in Part III: Phenotypic Studies investigate and analyze phenotypic markers that

serve as correlates to the genotypic determinants of alcoholism. Through its broad scope, this volume provides for the first time a panoramic view of the knowledge available on the hereditary influences of alcoholism. Global Urban Indicators Database University of Chicago Press Today, increasingly more, the word sustainability is present in all kinds of discussions: at home, at work, at

school, in all society. Conscious of the environment where we live everybody looks to find the best solutions to solve problems that result from Human Being evolution. Management for a sustainable development appears as a process from which organizations try to use all its resources, as well as improve its organizational and technological development, in order to

answer not only to the present but also to future human and social needs. Only in this way is it possible to improve the quality of life. Seen in this way, sustainable development is understood to be people centred. We have a special concern with cultural, social and economic dimensions, where individuals can develop, together as a society, whilst at the same time individual and organizational

activities can be implemented without destroying the present diversity and complexity of the ecological system where we live. Taking into account these concerns, this book looks to cover issues related to the management for sustainable development in a context where organizations are continually facing high challenges for what concerns the items related to, amongst others, the re-

use, recycling, waste reduction, add value, low costs and time of production, sustainable behaviour, not only in an environmental perspective but also in an organizational perspective. Today's organizations can no longer develop their practices based in the existent paradigms. On the contrary, it is necessary to completely break from these paradigms, creating a total change of mentality in the way we

manage the organizational activities. Taking into account this reality, managing for a sustainable development appears as a management philosophy focused in productivity improvement considering different kinds of goals, such as biological, economic and social systems goals. Conscious of this reality, this book contributes to the exchange of experiences and perspectives about the state of

research related to the management for a sustainable development, as well as the future direction of this research field. It looks to provide a support to academics and researchers, as well as those operating in the management field and who need to deal with policies and strategies related to sustainable development issues. [Access to Education in Bangladesh](#)

Springer
 The book uses an ethnographic approach to explore why the Tablighi Jamaat movement remains so successful in contemporary times. It shows that this success results from the positive image that it cultivates, and the systematic preaching activities of Tablighi Jamaat followers, and that the organisation's apolitical image, the public profile of the ijtema, the humbleness of Tablighi followers, and the attraction of belonging to the global Tablighi community all help to create a positive image of the Tablighi Jamaat among ordinary Muslims. The book also argues that the Tablighi Jamaat remains successful because of its ability to hold its followers within a Tablighi-guided life, which is perceived as protection against the Western lifestyle. Many elements of contemporary Western lifestyle are considered non-Islamic, and so by clearly defining what is Islamic and non-Islamic in modern society, the Tablighi Jamaat provides a way in which Muslims can live in the contemporary world, but remain good Muslims.

 This volume provides in a conveniently accessible package a comprehensive collection of accurate and timely information on the management of patients with diarrhea, both in pediatric age and in the adult. As medical knowledge has recently expanded in this area, this volume is full of new practical, clinically useful material for

the busy clinician. Illustrations are emphasized to permit rapid acquisition of practical information that is not readily available in the major texts. Each chapter is concise, concentrating on "clinical pearls," and new advances in diagnostic and therapeutic technology. Each chapter discusses the relative costs of diagnostic and therapeutic options to permit

financial considerations to be taken into account in the decision making process. Additional unique features include, summaries of key points, recommendations, and indications for requesting GI subspecialty consultation. Providing a comprehensive but practical overview of the issues surrounding the diarrheal diseases, this volume will prove of great value and utility to gastroenterolo

gists, surgeons, internists, primary care physicians.

Alcohol and Alcoholism Integrative Addiction and Recovery offers an authentic model of comprehensive integrative modalities germane and specific to the field of addiction and recovery treatment. Although many treatment services for addiction include "holistic," "alternative," or "integrative" in their descriptions, they contain

no substantive programs or services consistent with the mind, body, spirit paradigm contained within the integrative approach to health and healing. Consequently, many patients do not have the opportunity to benefit from the true spirit of an integrative approach within the discipline of addiction and recovery medicine. This book sets the standard for a bona fide integrative

approach for others to follow, providing information that is immediately useful in clinical practice and rigorously evidence-based. Authored by world-class experts in the field of addiction medicine, *Integrative Addiction and Recovery* presents both scientific and holistic data regarding a wide variety of holistic and conventional approaches to the treatment of substance

abuse and behavioral addictions. Its chapters cover both conventional and holistic treatment and provide background for each of the major classes of drugs of abuse, including opiates, alcohol, tobacco, stimulants, sedative-hypnotics, hallucinogens and marijuana. It also includes chapters on the topics of food addiction and behavioral addictions such as

gambling and shopping. The authors explore the major holistic modalities, providing background and theory in areas like acupuncture, Traditional Chinese Medicine, Homeopathy, Aromatherapy, and Ayurvedic Medicine, while at the same time providing spiritual approach chapters on Shamanism and Ibogaine, as well as more conventional issues with a holistic view

including Co-Occurring Disorders and Psychosocial Treatment, and Group

Support. The very complex issue of chronic pain and addiction

is also addressed, along with relapse prevention strategies.
