Vital Notes for Nurses John Wiley & Sons

For courses in Pediatric Nursing. A comprehensive survey of family-centered pediatric nursing care Child Health Nursing: Partnering with Children & Families promotes excellence in nursing care for infants, children, and adolescents--in hospitals and in the community. It focuses on the importance of partnering with families to adapt care plans for children based on their age, health status, and social and cultural influences. The text considers the impact of contemporary care environments on nursing practice, both in health promotion and in the care of children with acute or chronic health conditions. By offering industry best practices and practical applications, the book encourages students to apply evidence-based findings and clinical reasoning to planning superior care. The updated 3rd edition explains how modern nursing practice is affected by reforms to healthcare and its delivery--such as electronic health records, new approaches to chronic and acute

condition management, and a focus on prevention. To support safe, effective, and innovative care, this edition draws on the latest recommendations of NANDA International diagnoses, Nursing Intervention Classifications (NIC), Nursing Outcomes Classifications (NOC), and Healthy People 2020. Nursing 208 Medical Surgery Lecture Notes Lippincott Williams & Wilkins

A significant body of knowledge is the basis for a holistic, caring and scientific evidence-based nursing education in practice for professional development. Quality teaching leads to good learning and both aspects are two of the main issues of quality assurance in nursing education today. To begin with, not all nursing students have the same levels of motivation or learning abilities. It is with cognisance of providing quality care for patients that the role of the nurse educator has to be to enhance nursing students' learning using scientific evidence based teaching. Research around teaching and learning processes is an important part of the delivery of quality education, which in turn impacts on students' learning results and experiences, thereby, ensuring holistic biopsychosocial care to patients. The main aim of teaching and learning in nursing, at all levels, is to enhance the nurses' contribution to assist the individuals, families and communities in promoting and preserving health, well-being and to efficiently respond to illnesses. We hope that this book can be used as a resource to increase the body of knowledge in teaching and learning in nursing, thereby enhancing the role and contribution of health care professionals to clinical practice.
