John Yolton seeks to allow readers of Locke to have accessible in one volume sections from a wide range of Locke's books, structured so that some of the interconnections of his thought can be seen and traced. Although Locke did not write from a system of philosophy, he did have in mind an overall division of human knowledge. The readings begin with Locke's essay on Hermeneutics and the portions of his Essay Concerning Human Understanding on how to read a text. The rest of the selections are organized around Locke's division of human knowledge into natural science, ethics, and the theory of signs. Yolton's introduction and commentary explicate Locke's doctrines and provide the reader with the general background knowledge of other seventeenth-century writers and their works necessary to an understanding of Locke and his time.

The Time of the Clockmaker, the sequel to The Seventh Miss Hatfield, is set in the lush court of Henry VIII and continues Rebecca's romantic and action-packed time-traveling adventures. With an epic romance that cannot be stopped by the bounds of time as well as deeper questions regarding immortality, this is perfect for fans of love stories such as The Time Traveler's Wife, as well as historical fiction with a fantastical twist, like Grave Mercy by Robin LaFevers. Cynthia, who is now known only as the seventh Rebecca Hatfield, has settled in to the regular routine of traveling with the sixth Miss Hatfield. But when Rebecca's mentor is shockingly killed in front of her, Rebecca must flee the place and time she knows. She has lost her family, her dearest love, and her ability to live a normal life. All she has left is the gift—of immortality, and the bizarre clock that allows her to travel in time. Just when Rebecca thinks she might be safe, she is attacked too. The mysterious black-clad figure steals the clock, but not before it transports them to a new time: Tudor England. Without her clock, Rebecca is stranded in the past. Alone, without friends or resources, she must find a way to survive in the beautiful—but dangerous—court of Henry VIII. And what of her love, Henley, a boy Rebecca met in another time and place, but whose ghostly figure follows Rebecca wherever she goes, even when she begins a whirlwind romance with a dashing apprentice to the king's alchemist? The mysterious attacker—someone who seems to possess the same powers as Rebecca—could be anyone at the lavish court. Can Rebecca escape him and find a way home? Would that mean once again sacrificing her heart for the sake of keeping the secret of immortality safe? Epic Reads

The entrepreneur of phonograph concerts and motion-picture programs Lyman H. Howe was the leading traveling exhibitor of his time and the exemplar of an important but until now little examined aspect of American popular culture. This work, with its numerous and lively illustrations, uses his career to explore the world of itinerant showmen, who exhibited all motion pictures seen outside large cities during the 1890s and early 1900s. They frequently built cultural alliances with genteel city dwellers or conservative churchgoers and in later years favored "high-class" topics appealing to audiences uncomfortable with the plebeian nickelodeons. Bridging the fields of American studies and film history, the book reveals the remarkable sophistication with which exhibitors created their elaborate, evening-length programs to convey powerful ideological messages. Whether depicting the Spanish-American War, the 1900 Paris Exposition, or British colonialism in action, Howe's "cinema of reassurance" had many parallels with the music of John Philip Sousa. Originally published in 1991. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

This textbook has been conceptualized to provide a detailed description of the various aspects of Systems and Synthetic Biology, keeping the requirements of M.Sc. and Ph.D. students in mind. Also, it is hoped that this book will mentor young scientists who are willing to contribute to this area but do not know from where to begin. The book has been divided into two sections. The first section will deal with systems biology - in terms of the foundational understanding, highlighting issues in biological complexity, methods of analysis and various aspects of modelling. The second section deals with the engineering concepts, design strategies of the biological systems ranging from simple DNA/RNA fragments, switches and oscillators, molecular pathways to a complete synthetic cell will be described. Finally, the book will offer expert opinions in legal, safety, security and social issues to present a well-balanced information both for students and scientists.

This book constitutes the proceedings of the 12th German Conference on Multiagent System Technologies, MATES 2014,

held in Stuttgart, Germany, in September 2014. The 9 full papers and 7 short papers included in this volume were carefully reviewed and selected from 31 submissions. The book also contains 2 invited talks. The papers are organized in topical sections named: mechanisms, negotiation, and game theory; multiagent planning, learning, and control; and multiagent systems engineering, modeling and simulation.

A prominent linchpin in world politics and in security policies world over, oil and gas have tremendous value in both, the political and economical sectors of global relations, business establishments and policy. Regardless of whether one is a novice to a given field, or a well accomplished veteran in the field, there is a need for the continued engagement with the basics that underlie the core subjects. With that in mind, the Fundamentals of Oil and Gas is a perfect primer for the first-timer in the field, while also a copious text to help a seasoned veteran stay abreast with the nuances of the world of Oil and Gas.

This book presents some of the latest technologies in waste management, and emphasizes the benefits that can be gained from the use of recycled products. Divided into four sections, it deals with phytoremediation, aquatic weed management and the treatment of solid- and water-based wastes, such as those arising from agricultural, industrial and medical activities. With its special emphasis on the utilization of recycled products, this volume will be of interest to students, academicians, policy makers and others who have a practical and academic interest in dealing with the waste society generates.

Originally published in 1987, here are up-to-the-minute insights and perspectives on the application of the principles of behavioralism to social work practice. The foremost authorities in the field of behavioral social work provided important empirically based practice and qualitative research findings that effectively illustrated the validity of behavioral approaches to social work. This practical volume features original research findings that employ either conventional group research methods or single-subject approaches to practice evaluation; comprehensive reviews of the state of the art in behavioral social work; and treatment modalities, including individual, marital and family, and

group interventions. All in all, this title has the information professionals needed to keep abreast of the developments in this field at the time.

Addressing an important gap in the historiography of modern Assam, this book traces the relatively unexplored but profound transformations in the agrarian landscape of late- and post-colonial Assam that were instrumental in the making of modern Assamese peasantry and rural politics. It discusses the changing relations between various sections of peasantry, state, landed gentry, and politics of different ideological hues — nationalist, communist and socialist — and shows how a primarily agrarian question concerning peasantry came to occupy the centre stage in the nationalist politics of the state. It will especially interest scholars of history, agrarian and peasant studies, sociology, and contemporary politics, as also those concerned with Northeast India.

Red Strings Attached is a fictional story inspired by real relationships. When fact meets fiction, it makes for an epic love story you can't put down. Nellie is 24 years old and sets out to create a fresh start for herself by returning to college to make a career change and start a more professional path. Her expectations of this new stage in life takes a sharp turn in a different direction when she meets both of her Red String loves in a span of two years- just in time to fall deeply in love with the man her heart and body are drawn to before she meets the one that is best for her mind and soul. Love is blind, love is blissful and love is brutal. The task of juggling her new career and greatest loves pushes her to choose fight or flight while trying to make life changing decisions.

Nanoscale science and technology have occupied centre stage globally in modern scientific research and discourses in early twenty first century. The enabling nature of the technology makes it important in modern electronics, computing, materials, healthcare, energy and the environment. This volume contains some of the papers presented at the ICANN-2009, the first ever international conference on the subject held in the North-eastern part of India, with aims to promote sharing of new knowledge and exchange of the latest ideas in the field, through deliberations in the conference. The papers presented had been designed to represent the length and breadth of the field, with specific emphasis on the multidisciplinary nature of the subject. The peer reviewed articles contained herein are classified into several important subareas, e.g., nanostructured and nanoscale functional materials, nanobiotechnology, nanocomposites, nanoelectronics and nanosensors, nanomagnetism, computational nanotechnology etc. We hope that the readers would find the articles selected for publication scientifically exciting and useful.

In the year 2264, a meteor strikes Earth with such force that it nearly eliminates all living inhabitants. All technology is lost within the rubble of the planet's destruction, wiping our slate clean. After over 250 years, the planet begins to resemble a vague shadow of its former self which now embodies that of 1000 years into the past. Currently, the eastern area of the world is in turmoil at the hands of a tyrannical government known simply as the Empire. An Empire of murderers, rapists, thieves, and corrupt politics. After years of suffering under the rule of the imperials a

new light begins to shine through the black clouds of hatred: a resistance known to the people as "The Returners."

This book provides a systematic overview of the processing and applications of sustainable polymers. The volume covers recent advances in biomedical, food packaging, fuel cell, membrane, and other emerging applications. The book begins by addressing different sections of biomedical application including use of carbohydrate-based therapeutics, nanohybrids, nanohydrogels, bioresorbable polymers and their composites, polymer-grafted nanobiomaterials for biomedical devices and implants, nanofibres, and others. The second part of this book discusses various processing and packaging materials for food packaging applications. The last section discusses other emerging applications, including using microbial fuel cells for waste water treatment, microfluidic fuel cells for low power applications, among others. This volume will be relevant to researchers working to improve the properties of bio-based materials for their advanced application and wide commercialization.

This is a book for those of us who believed that we didn't need to learn Perl, and now we know it is more ubiquitous than ever. Perl is extremely flexible and powerful, and it isn't afraid of Web 2.0 or the cloud. Originally touted as the duct tape of the Internet, Perl has since evolved into a multipurpose, multiplatform language present absolutely everywhere: heavy-duty web applications, the cloud, systems administration, natural language processing, and financial engineering. Beginning Perl, Third Edition provides valuable insight into Perl's role regarding all of these tasks and more. Commencing with a comprehensive overview of language basics, you'll learn all about important concepts such as Perl's data types and control flow constructs. This material sets the stage for a discussion of more complex topics, such as writing custom functions, using regular expressions, and file input and output. Next, the book moves on to the advanced topics of object-oriented programming, modules, web programming, and database administration with Perl's powerful database interface module, DBI. The examples and code provided offer you all of the information you need to start writing your own powerful scripts to solve the problems listed above, and many more. Whether you are a complete novice or an experienced programmer, Beginning Perl, Third Edition offers an ideal guide to learning Perl.

Silk is increasingly being used as a biomaterial for tissue engineering applications, as well as sutures, due to its unique mechanical and chemical properties. Silk Biomaterials for Tissue Engineering and Regenerative Medicine discusses the properties of silk that make it useful for medical purposes and its applications in this area. Part one introduces silk biomaterials, discussing their fundamentals and how they are processed, and considering different types of silk biomaterials. Part two focuses on the properties and behavior of silk biomaterials and the implications of this for their applications in biomedicine. These chapters focus on topics including biodegradation, bio-response to silk sericin, and capillary growth behavior in porous silk films. Finally, part three discusses the applications of silk biomaterials for tissue engineering, regenerative medicine, and biomedicine, with chapters on the use of silk biomaterials for vertebral, dental, dermal, and cardiac tissue engineering. Silk Biomaterials for Tissue Engineering and Regenerative Medicine is an important resource for materials and tissue engineering scientists, R&D departments in industry and academia, and academics with an interest in the fields of biomaterials and tissue engineering.

Java Programming, From The Ground Up, with its flexible organization, teaches Java in a way that is refreshing, fun, interesting and still has all the appropriate programming pieces for students to learn. The motivation behind this writing is to bring a logical, readable, entertaining approach to keep your students involved. Each chapter has a Bigger Picture section at the end of the chapter to provide a variety of interesting related topics in computer science. The writing style is conversational and not overly technical so it addresses programming concepts appropriately. Because of the flexible organization of the text, it can be used for a one or two semester introductory Java programming class, as well as using Java as a second language. The text contains a large variety of carefully designed exercises that are more effective than the competition.

Revisiting India's Partition: New Essays on Memory, Culture, and Politics brings together scholars from across the globe to provide diverse perspectives on the continuing impact of the 1947 division of India on the eve of independence from the British Empire. The Partition caused a million deaths and displaced well over 10 million people. The trauma of brutal violence and displacement still haunts the survivors as well as their children and grandchildren. Nearly 70 years after this cataclysmic event, Revisiting India's Partition explores the impact of the "Long Partition," a concept developed by Vazira Zamindar to underscore the ongoing effects of the 1947 Partition upon all South Asian nations. In our collection, we extend and expand Zamindar's notion of the Long Partition to examine the cultural, political, economic, and psychological impact the Partition continues to have on communities throughout the South Asian diaspora. The nineteen interdisciplinary essays in this book provide a multi-vocal, multi-focal, transnational commentary on the Partition in relation to motifs, communities, and regions in South Asia that have received scant attention in previous scholarship. In their individual essays, contributors offer new engagements on South Asia in relation to several topics, including decolonization and post-colony, economic development and nation-building, cross-border skirmishes and terrorism, and nationalism. This book is dedicated to covering areas beyond Punjab and Bengal and includes analyses of how Sindh and Kashmir, Hyderabad, and more broadly South India, the Northeast, and Burma call for special attention in coming to terms with memory, culture and politics surrounding the Partition.

An expert guide to wine from the publishers of Larousse Gastronomique. This completely new and updated edition offers wide-ranging coverage of the key wine-producing regions of the world, with particular reference to French vineyards. A short history and analysis of each region is followed by a survey of the types of wines produced, the specific properties that make the region unique, and the appellations of the area. New to this edition are more than 60 features on key wine producers around the world, affording a fascinating insight into what is involved in high-quality wine-making. Boxes and features throughout also cover a vast range of subjects such as how to read a wine label and whether to decant wine, through to organic wine-growing and bio-dynamics.
