Principles and Practices of Citrus Culture in California Wentworth Press  
 Excerpt from Citrus Fruits and Their Culture The closing decades of the nineteenth century have seen great changes in the principles of citrus fruit culture in America. Twenty years ago the amount of fruit produced was comparatively small, now the industry has attained a place among the large horticultural industries of this country. Then, at most, a few hundred boxes of fruit were produced annually; now the crop is counted not by hundreds but by millions of boxes. The pomelo was

scarcely known and the lemon was a fruit imported almost entirely from the Old World. Then, the means of transportation closed many a desirable tract of land through which the railroad now runs and from which large quantities of fruit are now shipped. Then, the methods of combating insects and fungous diseases were less perfectly understood than now. In those days, the fertilizers applied to the soil were mostly made at home, now the nitrogen, phosphorus and potash, deemed so essential for the production of first-class fruit, in many districts, can be obtained as commercial commodities in any market. Numerous devices are now successfully employed in protecting trees and fruit against the effects of frost and freeze, then, nothing of the kind was

attempted or in fact deemed necessary. Then, cover crops were not considered in the light in which they now are. Then, the citrus industry in the New World was more or less firmly linked to that of the Old. Now, we have an American industry on the large, broad lines of American progress. Larousse

Les agrumes symbolisent la chaleur et le soleil du Sud. Certes, les climats méditerranéens offrent plus de facilité pour les cultiver en pleine terre, mais le nombre d'espèces qu'il est possible de planter sous des climats plus rigoureux est plus élevé qu'on ne le croit généralement... Et quelque soit la région, tous peuvent être cultivés en pot. Michel et Bénédicte Bachès, pépiniéristes passionnés qui possèdent la collection privée d'agrumes la plus importante de France, nous invitent à découvrir dans ce livre l'incroyable diversité de ce groupe de plantes. Ils nous font partager leur grand savoir-faire et nous donnent tous les conseils pratiques pour les cultiver facilement, en pleine terre comme en pot.

Selon une idée préconçue, les agrumes ne peuvent pousser que dans les régions méditerranéennes. Pourtant, certains orangers, mandariniers ou citronniers sont faciles à cultiver, résistent à la chaleur mais aussi au froid. Il est aujourd'hui possible de cultiver des agrumes partout en France en choisissant les bonnes variétés. Et si vous les invitiez dans votre jardin ? Les auteurs vous livrent toutes les clés pour : identifier votre zone climatique et les agrumes qui peuvent y pousser, planter, entretenir, et multiplier les agrumes facilement grâce aux astuces de pépiniériste, choisir la variété adaptée à votre jardin, découvrir ses qualités décoratives et gustatives. Où que vous soyez, dégustez de bons agrumes toute l'année (ou presque) ! Pépiniériste dans le Gard, Miriam Quissac, guide le lecteur à travers de nombreux conseils qui viennent ponctuer ce livre et en profite pour partager ses agrumes coup de cœur.

Excerpt from *Culture of the Citrus in California* Vancouver, in his memoir of the Pacific Coast, in 1792, describes an orchard which he found at Santa Clara in which were growing apples, peaches, pears, apricots, and figs, the trees all being thrifty and promising. He further details finding at the mission of San Buenaventura apples, pears, plums, figs, oranges, grapes, peaches, and pomegranates. The orchards connected with the Mission San Gabriel were among the most extensive of that early period, having, among other fruits growing, oranges, citrons, limes, apples, pears, peaches, pomegranates, and figs; grapes also grew in abundance. NO statistical accounts are extant recording the number of trees or the amount of fruit produced by

the missions at the period of their greatest prosperity. Inventories of the mission properties were made at the time of their secularization in 1834. That of the Santa Ynez Mission recorded 987 fruit trees, valued at \$1 each. San Fernando returned fruit trees, valued at each; San Gabriel, fruit trees, upon which no valuation was placed; and San Diego returned 517 olive trees. Outside of the missions there were a few attempts at horticulture, which might be called the prehistoric orchards of the State. About the Publisher

[Orange Culture: A Treatise on the Citrus Family](#)  
Excerpt from Practical Orange Culture, Including the Culture of the Orange, Lemon, Lime and Other Citrus Fruits, as Grown in Florida Orange culture, like everything else in our busy modern world, is progressive. What a few years since was a chaos of conflicting opinions and practice has been reduced to something like system. The more successful growers throughout the State pursue essentially the same plan, modified to suit the peculiarities of soil, location, etc., with which they have to deal. The following pages are intended to be a practical guide to orange culture, according to the most approved methods. The profits and delights of orange culture do not come, strictly speaking, within the scope of this work, and they have been too often and too fully set before the public to need further mention here. The author has not attempted the history of the orange and its congeners any further than is involved in a descriptive list of the varieties known in Florida. The origination and introduction of the several species and varieties are treated at length in other accessible works, and though the subject is one of great interest, it has no practical bearing upon successful culture in this State. Bearing groves have been made in an incredibly short time by grafting or budding wild trees found in the State. These wild groves, few at most, have now almost or entirely disappeared, and methods for their development having no longer a general application have not been thought sufficiently pertinent for a place in these pages.
