Bulletin de l'Institut international du froid Springer Science & Business Media
 Biogeography represents one of the most complex and challenging aspects of macroevolutionary research, requiring input from both the earth and life sciences. Palaeogeographic reconstruction is frequently carried out by researchers with backgrounds in geology and palaeontology, who are less likely to be familiar with the latest biogeographic techniques: conversely, biogeographic methods are often devised by neontologists who may be less familiar with the fossil record, stratigraphy, and

palaeogeography. Palaeogeography and Palaeobiogeography: Biodiversity in Space and Time bridges the gap between these two communities of researchers, who work on the same issues but typically use different types of data. The book covers a range of topics, and reflects some of the major overall questions in the field such as: Which approaches are best suited to reconstructing biogeographic histories under a range of circumstances? How do we maximize the use of organismal and earth sciences data to improve our understanding of events in earth history? How well do analytical techniques devised for researching the biogeography of extant organisms perform in the fossil record? Can alternative biodiversity metrics, particularly those based on morphological

measurements, enhance our understanding of biogeographic patterns and processes? This book approaches palaeobiogeography with coverage of technological applications and detailed case studies. It spans a wide selection of overlapping and integrative disciplines, including evolutionary theory, vicariance biogeography, extinctions, and the philosophical aspects of palaeogeography. It also highlights new technological innovations and applications for research. Presenting a unique discussion of both palaeogeography and palaeobiogeography in one volume, this book focuses both historically and philosophically on the interface between geology, climate, and organismal distribution.

Lie theory is a mathematical framework for encoding the concept of symmetries of a problem, and was the central theme of an INdAM intensive research period at the Centro de Giorgi in Pisa, Italy, in the academic year 2014-2015. This book gathers the key outcomes of this period, addressing topics such as: structure and representation theory of vertex algebras, Lie algebras and superalgebras, as well as hyperplane arrangements with different approaches, ranging from geometry and topology to combinatorics.

International Catalogue of Scientific Literature, 1901-1914 CUP Archive

The large lakes of the East African Rift Valley are among the oldest on Earth, and are vital resources for the people of their basins. They are unique among the large lakes of the world in terms of their sensitivity to climatic change, rich and diverse populations of endemic species, circulation dynamics and water-column chemistry, and long, continuous records of past climatic change. A comprehensive study of the large African lakes is long overdue. The scientific justification for such an effort is noted in the previous paragraph and is illustrated in great detail in this volume. Societal need for the sustainable utilization of these lakes offers an even more compelling reason for examination of biological food webs, water quality, and past climate variability in East Africa. The lakes provide the most important source of protein for the people of the African Rift Valley, and fish populations are shifting dramatically in response to fishing pressure, introduction of exotic species, land use impact on water quality, and perhaps climatic change. Current estimates of primary productivity, the underpinning of the food resource, are extremely crude and based on only a few spot measurements.

Palaeogeography and Palaeobiogeography: Biodiversity in Space and Time Springer

* The invited papers in this volume are written in honor of Alan Weinstein, one of the world's foremost geometers * Contributions cover a broad range of topics in symplectic and differential geometry, Lie theory, mechanics, and related fields * Intended for graduate students and working mathematicians, this text is a distillation of prominent research and an indication of future trends in geometry, mechanics, and mathematical physics

A Checklist of Parasites of California, Oregon, and Washington Marine and Estuarine Fishes Birkhäuser

Fish as Food, Volume I: Production, Biochemistry, and Microbiology discusses progress in the field of fish research. This volume is composed of 17 chapters that cover the biology, biochemistry, world production, cultivation, nutritional composition, and microbiology of fish. The introductory chapters present some examples of the biological basis for the relationships between yield in fishery and economics. The book goes on discussing fish cultivation in Europe, Japan, and South East Asia and the factors to consider in various cultivation methods. The subsequent chapters are devoted to the nutritional value of fish, including its lipid, mineral, water, fatty acid, and protein content. A chapter considers the oxidation properties and rancidity of fish. The book also covers some problems related to fishery business, such as the production of histamine, the occurrence of non-protein nitrogenous compounds, and the rigor mortis. The concluding chapters focus on microbiological aspects of fish production. Discussions on the microbial spoilage of marine fish, crustaceans, and mollusks; the microbiology of shellfish deterioration; and the use of chemical preservatives to control microbiological fish deterioration are also included. The book is an invaluable source primarily to food scientists and also to a wide range of research workers, including biologists, chemists, bacteriologists, parasitologists, oceanographers, nutritionists, and technologists.

Bibliography of Fossil Vertebrates Exclusive of North America, 1509-1927 BRILL

"Primary purpose of this monograph is to provide a systematic, organized source of technical data on marine biotoxicology covering the total world literature from antiquity to modern times ... A phylogenetic arrangement utilizing a historical approach has been adopted. Information on each phylogenetic group includes lists of venomous members, history of research, biology, morphology of the venom apparatus, medical aspects, toxicology, pharmacology, etc.. plus a bibliography for each section. Illustrated. Indexed. A 150 page history of marine toxicology begins volume one. The place to start on this subject.

Poisonous and Venomous Marine Animals of the World Routledge

The large lakes of the East African Rift Valley are among the oldest on Earth, and are vital resources for the people of their basins. They are unique among the large lakes of the world in terms of their sensitivity to climatic change, rich and diverse populations of endemic species,

circulation dynamics and water-column chemistry, and long, continuous records of past climatic change. A comprehensive study of the large African lakes is long overdue. The scientific justification for such an effort is noted in the previous paragraph and is illustrated in great detail in this volume. Societal need for the sustainable utilization of these lakes offers an even more compelling reason for examination of biological food webs, water quality, and past climate variability in East Africa. The lakes provide the most important source of protein for the people of the African Rift Valley, and fish populations are shifting dramatically in response to fishing pressure, introduction of exotic species, land use impact on water quality, and perhaps climatic change. Current estimates of primary productivity, the underpinning of the food resource, are extremely crude and based on only a few spot measurements.

The book aims at synthesizing our current knowledge of *Acipenser sturio* and its management. This species, one of the most widespread sturgeon species all over Western Europe ranging from the Black Sea to the Baltic, is now on the verge of extinction. Major aspects of its biology and management, including mismanagement, are provided in a historic perspective. Similarly, the changes in the restoration programs (in situ and ex situ) initiated in France and Germany are presented. As the species occurred in sympatry with *Acipenser oxyrinchus* in Germany and Poland and very recently in France as well, a brief outlook on restoration-management programs of *A. oxyrinchus* are also provided for both North America and Northern European countries, namely Germany and Poland. As conservation-restoration actions go beyond scientific issues, non-governmental stakeholders and marine professional fishermen's organizations have also been asked to contribute, and the key role of a French-German cooperation plan is underlined. A part of the book is devoted to perspectives. Illustrations of the European sturgeon, mainly in photographs, but also in stamps and paintings, are presented. *Controls of Sperm Motility* Taylor & Francis

The geometric formulation of autonomous Hamiltonian mechanics in the terms of symplectic and Poisson manifolds is generally accepted. This book provides the geometric formulation of non-autonomous mechanics in a general setting of time-dependent coordinate and reference frame transformations.

Quantum Mechanics World Scientific
Bibliographic Guide to Refrigeration 1965-1968 is a bibliographic guide to all the documents abstracted in the *International Institute of Refrigeration Bulletin* during the period 1965-1968. The references include nearly 7,000 reports, articles, and communications, classified according to subjects, and followed by a listing of books. This book is divided into 10 parts and begins with a listing of references on thermodynamics, heat transfer, and other basic physical phenomena relating to refrigeration, including desiccation and measurements of temperature, humidity, and pressure. The next sections are devoted to the physics of low temperatures and cryogenics; production and distribution of cold; refrigerating plants (mainly in the food domain); and refrigerated transport and packaging. Other references deal with air conditioning and heat pumps; and industrial, biological, medical, and agricultural applications of refrigeration. The final section focuses on standards and regulations, economics and statistics, and education and trade activities in the refrigeration industry. This guide is intended to assist researchers, engineers, manufacturers, and operators who are in either constant or occasional contact with the refrigeration domain.

Téledétection Satellitaire Et Pêcheries Thonières Océaniques Routledge

Poisson structures appear in a large variety of contexts, ranging from string theory, classical/quantum mechanics and differential geometry to abstract algebra, algebraic geometry and representation theory. In each one of these contexts, it turns out that the Poisson structure is not a theoretical artifact, but a key element which, unsolicited, comes along with the problem that is investigated, and its delicate properties are decisive for the solution to the problem in nearly all cases. *Poisson Structures* is the first book that offers a comprehensive introduction to the theory, as well as an overview of the different aspects of Poisson structures. The first part covers solid foundations, the central part consists of a detailed

exposition of the different known types of Poisson structures and of the (usually mathematical) contexts in which they appear, and the final part is devoted to the two main applications of Poisson structures (integrable systems and deformation quantization). The clear structure of the book makes it adequate for readers who come across Poisson structures in their research or for graduate students or advanced researchers who are interested in an introduction to the many facets and applications of Poisson structures.

International Catalogue of Scientific Literature Elsevier

First published in 1990, this timely book provides the first comprehensive state-of-the-art updates on various aspects of sperm motility. The first section describes in detail the structures, molecules and regulatory mechanisms involved in sperm movement. Also reported are the effects of external milieu and egg factors on the initiation and types of sperm motility. The second section covers how to measure sperm motility in human semen and in capacitating media. The book addresses the prognostic value of motility parameters in cases of infertility. It covers the clinical significance of various drugs and toxins on sperm motility and the clinical management of infertile males with sperm motility defects. This volume is indispensable to biochemists, cell biologists and andrologists interested in cell motility, and to urologists, obstetricians, gynecologists, and endocrinologists involved in the management of infertility. It is of value to those in reproduction, animal science, veterinary science, and vertebrate zoology. The book contains basic and clinically relevant information for graduate students, researchers and clinicians.

Geological Society of America

This 1981 volume considers all the aspects of grey mullets which are of relevance to their culture.

Bibliographic Guide to Refrigeration 1965-1968 Springer Science & Business Media

This book is addressed to graduate students and researchers in the fields of mathematics and physics who are interested in mathematical and theoretical physics, differential geometry, mechanics, quantization theories and quantum physics, quantum groups etc., and who are familiar with differentiable and symplectic manifolds. The aim of the book is to provide the reader with a monograph that enables him to study systematically basic and advanced material on the recently developed theory of Poisson manifolds, and that also offers ready access to bibliographical references for the continuation of his study. Until now, most of this material was dispersed in research papers published in many journals and languages. The main subjects treated are the Schouten-Nijenhuis bracket; the generalized Frobenius theorem; the basics of Poisson manifolds; Poisson calculus and cohomology; quantization; Poisson morphisms and reduction; realizations of Poisson manifolds by symplectic manifolds and by symplectic groupoids and Poisson-Lie groups. The book unifies terminology and notation. It also reports on some original developments stemming from the author's work, including new results on Poisson cohomology and geometric quantization, cofoliations and biinvariant Poisson structures on Lie groups.
