KEMP KIERA

Grand dictionnaire universel du XIXe siècle
 Rubbettino Editore
 This ground-breaking work documents Russian efforts to appropriate Western solutions to the problem of economic backwardness since the time of Catherine the Great. Entangled then as now with issues of cultural borrowing, educated Russians searched for Western nations, ideas,

and social groups that embodied universal economic truths applicable to their own country. Esther Kingston-Mann describes Russian Westernization--which emphasized German as well as Anglo-U.S. economics--while she raises important questions about core values of Western culture and how cultural values and priorities are determined. This is the first historical account of the significant role played by Russian social scientists in nineteenth-

century Western economic and social thought. In an era of rapid Western colonial expansion, the Russian quest for the "right" Western economic model became more urgent: Was Russia condemned to the fate of India if it did not become an England? In the 1900s, Russian liberal economists emphasized cultural difference and historical context, while Marxists and prerevolutionary government reformers declared that inexorable economic laws doomed

peasants and their "medieval" communities. On the eve of 1917, both the tsarist regime and its leading critics agreed that Russia must choose between Western-style progress or "feudal" stagnation. And when peasants and communes survived until Stalin's time, he mercilessly destroyed them in the name of progress. Today Russia's painful modernizing traditions shape the policies of contemporary reformers, who seem as certain as their predecessors that

economic progress requires wholesale obliteration of the past.

L'opéra italien n'a cessé de s'enrichir au contact de la littérature française. Les échanges entre ces deux genres se caractérisent par le double jeu de proximité et de distance qui existe entre eux. La recherche en dramaturgie musicale éclaire les questions auxquelles sont confrontés traducteurs, librettistes et compositeurs dans leur travail de réécriture pour la scène lyrique italienne.

Railways and the Western European Capitals Boston : G.K. Hall

One of the major historians of prerevolutionary Russia has collected in this volume some of his most important essays. Written over a number of years, these pioneering works have been revised and updated and are complemented by others being published for the first time. Thematically, they cover major subjects in Imperial Russian history and in historical writing, such as ideas and their role in historical change; the intelligentsia, the nobility, and peasant

society; and historiography. The twelve essays raise cardinal questions about current scholarship on Russian history before the upheavals of 1917 and offer original interpretations that are of interest to the educated layman as well as the professional historian. *Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971* Berghahn Books
 Jerry Thigpen's study on the history of the Combat Talon is the first effort to

tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and

resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the

Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-driven

officers as Brenci Uttaro Ferkes Meller and Thigpen the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous environment covertly to execute any number of unconventional warfare missions.

Index-catalogue of the Library of the Surgeon-General's Office, United States Army Springer

This book looks at the effect of railways on London, Paris, Brussels, and Berlin, focusing on

each city as a case study for one aspect of implantation.

Blondel e i neotomisti

Princeton University Press

This beautiful book

features masterpieces of sculpture in the collection of the Metropolitan

Museum dating from the Renaissance through the nineteenth century.

Celebrated works by the great European sculptors - including Luca and Andrea della Robbia, Juan

Martínez Montañés,

Gianlorenzo Bernini, Jean-

Antoine Houdon, Bertel

Thorvaldsen, Antoine-

Louis Barye, Jean-Baptiste Carpeaux, Edgar Degas, and Auguste Rodin- are joined by striking new additions to the collection, notably Franz Xaver Messerschmidt's remarkable bust of a troubled and introspective man. The ninety-two selected examples are diverse in media (marble, bronze, wood, terracotta, and ivory) and size - ranging from a tiny oil lamp fantastically conceived and decorated by the Renaissance bronze sculptor Riccio to Antonio Canova's eight-

foot-high Perseus with the Head of Medusa, executed in the heroic Neoclassical style.

Incorporating information from the latest scholarly research and recent conservation studies, sculpture specialist Ian Wardropper discusses the history and significance of the highlighted works, each of which is reproduced with glorious new photography.

Autonomous Horizons

BRILL

Dr. Greg Zacharias, former Chief Scientist of the United States Air

Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities

for novel and disruptive concepts of operations. Autonomous Horizons: The Way Forward identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology. In Search of the True West Editions Mardaga This book tells the story of how 18th-century European philosophy used Locke's theory of signs to build a natural history of speech and to investigate the semiotic tools with which nature and civil

society can be controlled. The story ends at the point where this approach to language sciences was called into question. Its epilogue is the description of the birth of an alternative between empiricism and idealism in late 18th- and early 19th-century theories of language. This alternative has given rise to such irreducible dichotomies as empirical linguistics vs. speculative linguistics, philosophies of linguistics vs. philosophy of language. Since then philosophers have largely

given up reflecting on linguistic practice and have left the burden of unifying and interpreting empirical research data to professional linguists, limiting themselves to the study of foundations and to purely self-contemplative undertakings. The theoretical and institutional relevance to the present of the problems arising from this situation is in itself a sufficient reason for casting our minds back over a period in which, as in no other, linguistic

research was an integral part of the encyclopaedia of knowledge, and in which philosophers reflected, and encouraged reflection, upon the semiotic instruments of science and politics.
