Welcome to GRID 2000, the first annual IEEE/ACM international workshop on grid computing sponsored by the IEEE Computer Society's Task Force on Cluster Computing (TFCC) and the Association for Computing Machinery (ACM). The workshop has received generous sponsorship from the European Grid Forum (eGrid), the EuroTools SIG on Metacomputing, Microsoft Research (USA), Sun Microsystems (USA), and the Centre for Development of Advanced Computing (India). It is a sign of the current high

levels of interest and activity in Grid computing that we have had contributions to the workshop from researchers and developers in Australia, Austria, Canada, France, Germany, Greece, India, Italy, Japan, Korea, The Netherlands, Spain, Switzerland, UK, and USA. It is our pleasure and honor to present the first annual international Grid computing meeting program and the proceedings. The Grid: A New Network Computing Infrastructure The growing popularity of the Internet along with the availability of powerful computers and high speed networks as low cost commodity components are helping to change the way we do computing. These new technologies are enabling the coupling of a wide variety of geographically distributed resources, such as parallel supercomputers, storage systems, data sources, and special devices, that can then be used as a unified resource and thus form what is popularly known as the "Grids".

We planned this book as a Festschrift for Smitty Stevens because we thought he might be retiring around 1974, although we knew very well that only death or deep illness would stop Smitty from doing science. Death came suddenly, unexpectedly - after a full day of skiing at Vail, Colorado on the annual trip with wife Didi to the Winter Conference on Brain Research. Smitty liked winter conferences near ski resorts and often tried to get us other psychophysicists to organize one. Every person is unique. Smitty would have said it's mainly because each of us has so many genes that two combinations just alike would be well-nigh impossible. But most of us strive in many ways to be like others, and to abide by the norms (some smaller number try even harder

to be unlike other people); as a result many persons seem to lose their uniqueness, their individuality. Not Smitty. He tried neither to be like others nor to be different. He took himself as he found himself, and ascribed peculiarities, strengths, and weaknesses to his pioneering Utah forebears, in whom he took much pride. His was the true and right nonconformity. He approached each task, each problem, ready to grapple with the facts and set them into meaningful order. And if the answer he came up with was different from everyone else's, well that was too bad.
