This book draws together various theoretical and research-based perspectives to examine the institutionalization of mentoring processes for beginning teachers. Teacher induction, defined as the guidance provided to new teachers, is increasingly gaining traction as a key stage in promoting quality education. Major efforts have been put into reducing transitional challenges from being a student teacher to a practicing teacher; optimizing professional relationships and socialization into school dynamics;

and increasing teacher retention. Mentoring has been proven to add benefits in assisting beginning teachers during the early years of their teaching career, because it provides the required knowledge and skills to face uncertain school scenarios and the complexities of practice. However, teacher induction programs are not part of regular instruction in many countries. The lack of teacher training during the induction phase might result in lower levels of commitment, professional isolation, or even attrition.

This book calls for more concrete mentoring processes for early career teachers, and questions how this can be put into practice.

**Ferdowsi's Shāhnāma** Franklin Watts

This work seeks to explain how both exogenous and endogenous factors may shape the characteristics of American far right violence, including political, demographic, and economic factors. Findings indicate that contentious and conservative political environments as well as the political empowerment are positively associated with the volume of violence; thus, it is not only feelings of deprivation that motivate those involved in far right violence, but also the sense of empowerment that emerges when the political system is perceived to be increasingly permissive to far right ideas. These trends contradict predominant perceptions which associate motivational forces that facilitate political violence with the unbalanced allocation of goods, and provide support for explanations which focus on correlations between violence and perceived changes in the sociopolitical structure. While the findings are not particularly strong with regard to the

relationship between the level of violence and economic factors, when looking at the trends in violence not only in relation to time, but also across space, and considering demographic indicators, it is clear that the violence is concentrated in heterogeneous areas, thus supporting theoretical assumptions associating intra-community violence with community cohesiveness and its members' perceptions regarding community boundaries. It is therefore clear from a policy perspective that more effort is needed to create effective integration mechanisms in areas in which we see growing ethnic, religious and cultural diversity. Finally, this work provides additional insights that raise new questions for further research, such as the perceived limited correlation between the level of violence and the proportion and size of certain minority groups; changing trends in cooperation between various ideological streams; the shift of the violence from the South to other parts of the country; changes in the balance of power within the movements; and the clear decline of some of the groups, such as anti-abortionist extremists. This study is intended to represent a point of departure for further exploration of the American far right in addition to informing current research and policy discussions.

Ferdowsi's *Shahnama: Millennial Perspectives* celebrates the ongoing reception, over the last thousand years, of a masterpiece of classical Persian poetry. The epic of the *Shahnama* or Book of Kings glorifies the spectacular achievements of Iranian civilization from its mythologized beginnings all the way to the historical time of the Arab Conquest, when the notionally unbroken sequence of Iranian shahs came to an end. The poet Hakim Abu'l-Qasim, who composed this epic, was renamed Ferdowsi or "the man of Paradise" in recognition of his immortalizing artistic accomplishment. Even now, over a thousand years after his death in 1010 CE, the impact of Ferdowsi's epic poetry reverberates in the intellectual and artistic life of Persianate cultures all over the world. *Ferdowsi's Shahnama: Millennial Perspectives* undertakes a new look at the reception of Ferdowsi's poetry, especially in the twelfth, thirteenth, fourteenth, and fifteenth centuries CE. Such a reception, the contributors to this book argue, actively engages the visual as well as the verbal arts of Iranian civilization. The paintings and other art objects illustrating the *Shahnama* over the ages are as vitally relevant as the words of Ferdowsi's poetry.

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few

include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

MATHEMATICAL APPLICATIONS FOR THE MANAGEMENT, LIFE, AND SOCIAL SCIENCES, 10th Edition, is intended for a two-semester applied calculus or combined finite mathematics and applied calculus course. The book's concept-based approach, multiple presentation methods, and interesting and relevant applications keep students who typically take the course--business, economics, life sciences, and social sciences majors--engaged in the material. This edition broadens the book's real-life context by adding a number of environmental science and economic applications. The use of modeling has been expanded, with modeling problems now clearly labeled in the examples. Also included in the Tenth Edition is a brief review of algebra to prepare students with different backgrounds for the material in later chapters. Beyond Training examines the nature of second language teacher development and how teachers' practices are influenced by their beliefs and principles. It seeks to move discussion of language teacher development beyond the level of "training," which reflects a technical view of specific teaching practices. Instead, it takes a more holistic approach to teacher development built on the notion of the teacher as critical and reflective thinker. The argument pursued throughout is that teacher education needs to engage teachers not merely in the mastery of techniques, but in an exploration of the knowledge, beliefs, and attitudes that underly their teaching practices.
