Regenerative Medicine

Springer

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of

groups pushed to the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, this book explores the critical, 'insurgent' possibilities of constitutionalism as a means of revitalising the concepts of non-discrimination and liberty, and of reimagining democratic citizenship. The book argues that the

breaking down of discrimination in constitutional interpretation and the narrowing of the field of liberty in law deepen discriminatory ideologies and practices. Instead, it offers an intersectional approach to jurisprudence as a means of enabling the law to address the problem of discrimination along multiple, intersecting axes. The

argument is developed in the context of the various grounds of discrimination mentioned in the constitution — caste, tribe, religious minorities, women, sexual minorities, and disability. The study draws on a rich body of materials, including official reports, case law and historical records, and uses insights from social theory, anthropology, literary and historical studies and constitutional jurisprudence to offer a new reading of non-discrimination. This book will be useful to those

interested in law, sociology, gender studies, politics, constitutionalism, disability studies, human rights, social exclusion, etc.

Business India Discovery Publishing House
This book constitutes the refereed conference proceedings of the 7th International Conference on Mining Intelligence and Knowledge Exploration, MIKE 2019, held in Goa, India, in December 2019. The 31 full papers were carefully reviewed and selected from 83 submissions. The

accepted papers were chosen on the basis of research excellence, which provides a body of literature for researchers involved in exploring, developing, and validating learning algorithms and knowledge-discovery techniques. Accepted papers were grouped into various subtopics including evolutionary computation, knowledge exploration in IoT, artificial intelligence, machine learning, image processing, pattern recognition, speech processing, information

retrieval, natural language processing, social network analysis, security, fuzzy rough sets, and other areas.

Trade Union Record
Routledge

This book constitutes the refereed proceedings of the 5th International Workshop on Data Integration in the Life Sciences, DILS 2008, held in Evry, France in June 2008. The 18 revised full papers presented together with 3 keynote talks and a tutorial paper were carefully reviewed and selected from 54

submissions. The papers address all current issues in data integration and data management from the life science point of view and are organized in topical sections on Semantic Web for the life sciences, designing and evaluating architectures to integrate biological data, new architectures and experience on using systems, systems using technologies from the Semantic Web for the life sciences, mining integrated biological data, and new features of major resources for

biomolecular data.

Mining Intelligence and Knowledge Exploration

Springer

Vector-borne diseases have increasingly emerged as significant causes of human illnesses worldwide, largely due to environmental changes (deforestation), population movements (migration and travelling), international trades, and buildup of drug resistance. These are presenting major challenge to the efficacy and use of conventional tools for controlling

vector-borne diseases. Therefore, use of microbial approach for the control of vector-borne diseases is gaining importance. This book comprehensively reviews vector-borne diseases and their microbial control, emphasizing majorly on ecofriendly ways of microbial control.

Genomics and Health in the Developing World Oxford University Press
Genomics and Health in the Developing World provides detailed and comprehensive coverage

of population structures, human genomics, and genome variation--with particular emphasis on medical and health issues--in the emerging economies and countries of the developing world. With sections dedicated to fundamtnals of genetics and genomics, epidemiology of human disease, biomarkers, comparative genomics, developments in translational genomic medicine, current and future health strategies related to genetic disease, and pertinent legislative

and social factors, this volume highlights the importance of utilizing genetics/genomics knowledge to promote and achieve optimal health in the developing world. Grouped by geographic region, the chapters in this volume address: - Inherited disorders in the developing world, including a thorough look at genetic disorders in minority groups of every continent - The progress of diagnostic laboratory genetic testing, prenatal screening, and genetic

counseling worldwide - Rising ethical and legal concerns of medical genetics in the developing world - Social, cultural, and religious issues related to genetic diseases across continents Both timely and vastly informative, this book is a unique and comprehensive resource for genetists, clinicians, and public health professionals interested in the social, ethical, economic, and legal matters associated with medical genetics in the developing world.

Women and the Colonial

Gaze IGI Global

The present work is concerned with problems of girl child, their exploitation, discrimination, disparity in education and health sector, sex determination tests, sex-ratio and their serious implications in India in the global frame. Both Primary and secondary sources of data have been accumulated and used for analysis and interpretation in making the study more interesting and useful. Contents: Introduction,

Exploitation of Girl Child in Indian States, Girl Child and Disparity in Education, Neglect of Girl Child in Health Sector, Human Rights and the Girl Child, Conclusion.

Girl Child in India

Springer Science & Business Media

This book sheds new light on the use of nanoparticles in the fields of parasitology and public and animal health. Nanotechnology has been used in many fields of research and in practical applications. A special subgroup is represented

by the so-called nanobiotechnology, which is a multidisciplinary integration of biotechnology, nanotechnology, chemical processing, material science and engineering. In the fields of parasitology and public and animal health this technology has been used to develop systems, wherein acaricides and insecticides are included. This technique avoids direct contact of the hosts of parasites (animals, humans) with the insecticides/acaricides

and thus minimizes effects on their health and also the development of resistances of the vectors (ticks, mosquitos, flies etc.). Since actually many original articles on the use of nanoparticles bearing arthropodocides appear in different journals – as well as in Parasitology Research of Springer - it seems reasonable to check the status quo and to elucidate possible chances of progress. This book will appeal to a wide readership, from researchers through veterinarians to

professionals working in the conservation, public health, or sustainable agriculture area. [Annual Report of the Registrar of Newspapers for India](#) Springer This three-volume collection, titled Enterprise Information Systems: Concepts, Methodologies, Tools and Applications, provides a complete assessment of the latest developments in enterprise information systems research, including development, design, and emerging methodologies. Experts in

the field cover all aspects of enterprise resource planning (ERP), e-commerce, and organizational, social and technological implications of enterprise information systems.

Enterprise Information Systems: Concepts, Methodologies, Tools and Applications IGI

Global

Addresses the field of enterprise systems, covering progressive technologies, leading theories, and advanced applications.

32nd Session of AITUC,

Bangalore, December 15-20, 1983 Routledge
Regenerative Medicine is a fastly emerging interdisciplinary field of research and clinical therapies on the repair, replacement or regeneration of cells, tissues or organs in congenital or acquired disease. This new field of research and clinical development focussing on stem cell science and regenerative biology is just starting to be the most fascinating and controversial medical development at the dawn

of the 21st century. Viewing the great expectations to restructure and regenerate tissue, organs or organisms the current attempts of scientist and physicians are still in an early phase of development. This new textbook on “Regenerative Medicine – from protocol to patient” is aiming to explain the scientific knowledge and emerging technology as well as the clinical application in different organ systems and diseases. The

international leading experts from four continents describe the latest scientific and clinical knowledge of the field of “Regenerative Medicine”. The process of translating science of laboratory protocols into therapies is explained in sections on basic science, clinical translation, regulatory, ethical and industrial issues. The textbook is aiming to give the student, the researcher, the health care professional, the physician, and the patient a complete survey on the

current scientific basis, therapeutical protocols, clinical translation and practised therapies in Regenerative Medicine. IUPAC Handbook IGI Global "Women and the Colonial Gaze" examines the way images of women have been used by colonizers and subject peoples to define the colonial relationship. Tamil Nāṭu Toḷilāḷar Turai Aracita Springer Nature The Routledge Companion to Music and Human Rights is a collection of case studies spanning a

wide range of concerns about music and human rights in response to intensifying challenges to the well-being of individuals, peoples, and the planet. It brings forward the expertise of academic researchers, lawyers, human rights practitioners, and performing musicians who offer critical reflection on how their work might identify, inform, or advance mutual interests in their respective fields. The book is comprised of 28 chapters, interspersed with 23 ‘voices’ – portraits

that focus on individuals' intimate experiences with music in the defence or advancement of human rights - and explores the following four themes: 1) Fundamentals on music and human rights; 2) Music in pursuit of human rights; 3) Music as a means of violating human rights; 4) Human rights and music: intrinsic resonances.

Journal of the Indian Medical Association

Springer

This book constitutes the refereed conference proceedings of the 6th

International Conference on Mining Intelligence and Knowledge Exploration, MIKE 2018, held in Cluj-Napoca, Romania, in December 2018. The 33 full papers presented were carefully reviewed and selected from 93 submissions. The papers were grouped into various subtopics including evolutionary computation, knowledge exploration in IoT, artificial intelligence, machine learning, image processing, pattern recognition, speech processing, information retrieval, natural

language processing, social network analysis, security, and fuzzy rough sets.

Indian Labour Journal CRC Press

This book constitutes revised selected papers from the 12th international Global Sourcing Workshop 2018, held in La Thuile, Italy, in February 2018. The 9 contributions included were carefully reviewed and selected from 40 submissions. The book offers a review of the key topics in sourcing of services, populated with

practical frameworks that serve as a tool kit to students and managers. The range of topics covered in this book is wide and diverse, offering micro and macro perspectives on successful sourcing of services. Case studies from various organizations, industries and countries are used extensively throughout the book, giving it a unique position within the current literature offering.

Handbook of Universities Springer
This book provides

comprehensive information on the genetics of eye diseases affecting various parts of the eye, and addresses a range of genetic etiologies. These diseases include several hereditary disorders of anterior and posterior segment, and with different genetic etiologies. The genetics of eye diseases is a field that has been rapidly growing over the last two decades, and comprises a vast area with considerable clinical and genetic heterogeneity. The main goal of this work is to

discuss the status quo of genetics for each of the disorders covered, and to highlight unusual or atypical patterns of inheritance and genetic associations. For each relevant gene, it describes the pathogenic associations and variants, genotype-phenotype correlations, and functions at the cellular and molecular level. Genetics of Eye Diseases offers a valuable reference guide for geneticists and clinicians alike, while also providing a comprehensive overview

of the field for graduate and doctoral-level students. In addition to sharing essential information on the genetics of each disease, it highlights recent advances that are representative of the developments in the field as a whole.

Digital Services and Platforms. Considerations for Sourcing Springer Science & Business Media
The relationship between citizens and city governments is gradually transforming due to the utilization of advanced

information and communication technologies in order to inform, consult, and engage citizens. Citizen E-Participation in Urban Governance: Crowdsourcing and Collaborative Creativity explores the nature of the new challenges confronting citizens and local governments in the field of urban governance. This comprehensive reference source explores the role that Web 2.0 technologies play in promoting citizen participation and

empowerment in the city government and is intended for scholars, researchers, students, and practitioners in the field of urban studies, urban planning, political science, public administration, and more. **Annual Report** IGI Global Reports for 1958-1970 include catalogues of newspapers published in each state and Union Territory. **Tamiḻ Nāṭu Toḻilāḻar Tuṛai Arcitaḻ** Atlantic Publishers & Dist Information technology has helped to facilitate

the development of various marketing techniques, thus enabling a more efficient distribution of the data that are essential to business success. These advances have equipped managers with superior tools to interpret available consumer and product data and use this information as part of their strategic planning. Trends and Innovations in Marketing Information Systems features the latest prevailing technological functions and procedures necessary

to promote new developments in promotional tools and methods. Bringing together extensive discussions on the role of digital tools in customer relationship management, social media, and market performance, this book is an essential reference source for business professionals, managers, and researchers interested in the use of current technology to improve marketing practice.

Crowdsourcing and Collaborative Creativity

The Most Authentic Source Of Information On Higher Education In India The Handbook Of Universities, Deemed Universities, Colleges, Private Universities And Prominent Educational & Research Institutions Provides Much Needed Information On Degree And Diploma Awarding Universities And Institutions Of National Importance That Impart General, Technical And Professional Education In

India. Although Another Directory Of Similar Nature Is Available In The Market, The Distinct Feature Of The Present Handbook, That Makes It One Of Its Kind, Is That It Also Includes Entries And Details Of The Private Universities Functioning Across The Country. In This Handbook, The Universities Have Been Listed In An Alphabetical Order. This Facilitates Easy Location Of Their Names. In Addition To The Brief History Of These Universities, The Present Handbook Provides The

Names Of Their Vice-Chancellor, Professors And Readers As Well As Their Faculties And Departments. It Also Acquaints The Readers With The Various Courses Of Studies Offered By Each University. It Is Hoped That The Handbook In Its Present Form, Will Prove Immensely Helpful To The Aspiring Students In Choosing The Best Educational Institution For Their Career Enhancement. In Addition, It Will Also Prove Very Useful For The Publishers

In Mailing Their Publicity Materials. Even The Suppliers Of Equipment And Services Required By These Educational Institutions Will Find It Highly Valuable.

Tools of Justice

Stroke is the most common cause of serious physical disability and the third most common cause of death in many developed countries. As such it poses a considerable burden upon healthcare services at the primary care and hospital levels. One of the main problems facing the

doctor dealing with a suspected stroke patient is making a rapid and accurate diagnosis as this is crucial to correct management over the first critical hours. Indeed, there are a number of conditions which appears similar to stroke but which have very different consequences. Professor

Warlow leads a team of stroke experts at the Western General Hospital in Edinburgh which has become a world reference centre for stroke and he has built up a very strong international reputation for the group in recent years. As such, he is the ideal first author for this

new book on the diagnosis and management of stroke. Professor Warlow has put together a small, hand-picked team of close collaborators who have worked together to produce a coherent and seamless account of the clinical practice of stroke care.
