 Named one of the Best Crime Books of the Year by the Guardian , *Weirdo* is an atmospheric thriller about a teenage girl convicted of murder in a 1980s seaside town and the private investigator who reopens the case to discover that she may not have acted alone ... Corinne Woodrow was fifteen when she was convicted of the ritualistic murder of her classmate in a quaint seaside town. It was 1984, a year when teenagers ran wild, dressed in black, stayed out all night, and listened to music that terrified their parents. Rumours of Satanism surrounded Corinne and she was locked up indefinitely, a chilling reminder to the parents of Ernemouth to keep a watchful eye on their children. Twenty years later, private investigator Sean Ward — whose promising career as a detective with the Metropolitan Police was cut short by a teenager with a gun — reopens the case after new forensic evidence suggests that Corinne didn't act alone. His investigation uncovers a town full of secrets, and a community that has always looked after its own.

In this World Fantasy Award-winning novel of magic and kungfu, four siblings battle rival clans for honor and power in an Asia-inspired fantasy metropolis. *Named one of TIME's Top 100 Fantasy Books Of All Time * World Fantasy Award for Best Novel, winner Jade is the lifeblood of the island of Kekon. It has been mined, traded, stolen, and killed for -- and for centuries, honorable Green Bone warriors like the Kaul family have used it to enhance their magical abilities and defend the island from foreign invasion. Now, the war is over and a new generation of Kauls vies for control of Kekon's bustling capital city. They care about nothing but protecting their own, cornering the jade market, and defending the districts under their protection. Ancient tradition has little place in this rapidly changing nation. When a powerful new drug emerges that lets anyone -- even foreigners -- wield jade, the simmering tension between the Kauls and the rival Ayt family erupts into open violence. The outcome of this clan war will determine the fate of all Green Bones -- and of Kekon itself. Praise for *Jade City*: "An epic drama reminiscent of the best classic Hong Kong gangster films but set in a fantasy metropolis so gritty and well-imagined that you'll forget you're reading a book." --Ken Liu, Hugo, Nebula, and World Fantasy Award-winning author "A beautifully realized setting, a great cast of characters, and dramatic action scenes. "What makes you the way you are--and what makes each of us different from everyone else? In *Innate*, leading neuroscientist and popular science blogger Kevin Mitchell traces human diversity and individual differences to their deepest level: in the wiring of our brains. Deftly guiding us through important new research, including his own groundbreaking work, he explains how variations in the way our brains develop before birth strongly influence our psychology and behavior throughout our lives, shaping our personality, intelligence, sexuality, and even the way we perceive the world. We all share a genetic program for making a human brain, and the program for making a brain like yours is specifically encoded in your DNA. But, as Mitchell explains, the way that program plays out is affected by random processes of development that manifest uniquely in each person, even identical twins. The key insight of *Innate* is that the combination of these developmental and genetic variations creates innate differences in how our brains are wired--differences that impact all aspects of our psychology--and this insight promises to transform the way we see the interplay of nature and nurture. *Innate* also explores the genetic and neural underpinnings of disorders such as autism, schizophrenia, and epilepsy, and how our understanding of these conditions is being revolutionized. In addition, the book examines the social and ethical implications of these ideas and of new technologies that may soon offer the means to predict or manipulate human traits. Compelling and original, *Innate* will change the way you think about why and how we are who we are."--Provided by the publisher.

The Case against Perfection Oxford University Press, USA

In an increasingly diverse society, it is essential that medicine be

aware of matters of difference. Medical humanities programs promote awareness of the social aspects of medicine, and the Association of American Medical Colleges has recently instituted cultural competencies for clinical interaction for the training of medical students. Yet these efforts to impart understanding of the cross-cultural aspects of medicine are still hindered by a significant limitation: within a medical system whose currency is diagnosis, difference is primarily defined through disease. This special issue of *Literature and Medicine* focuses on difference and identity in the context of disease and disability. The articles collected here explore the complex ways in which notions of disease, disability, and difference are related and in which bodies marked by gender, race, disability, sexuality, and ethnic identities experience disease in specific ways. The essays take a humanities-based approach to the subject and emphasize an awareness and sensitivity to difference through forms of symbolic representation such as metaphor and narrative. This volume provides a heuristic lens through which relationships between individual expressions of identity and communal experiences of difference can be considered. Each article speaks to the process whereby individual stories and strategies shape, and are in turn shaped by, the institutions they seek to transform. *Literature and Medicine* is devoted to exploring interfaces between literary and medical knowledge and understanding. The journal showcases the creative and critical work of renowned physician-writers, leading literary scholars, and medical humanists.

Breakthroughs in genetics present us with a promise and a predicament. The promise is that we will soon be able to treat and prevent a host of debilitating diseases. The predicament is that our newfound genetic knowledge may enable us to manipulate our nature—to enhance our genetic traits and those of our children. Although most people find at least some forms of genetic engineering disquieting, it is not easy to articulate why. What is wrong with re-engineering our nature? *The Case against Perfection* explores these and other moral quandaries connected with the quest to perfect ourselves and our children. Michael Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. The drive to enhance human nature through genetic technologies is objectionable because it represents a bid for mastery and dominion that fails to appreciate the gifted character of human powers and achievements. Carrying us beyond familiar terms of political discourse, this book contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual questions back onto the political agenda. In order to grapple with the ethics of enhancement, we need to confront questions largely lost from view in the modern world. Since these questions verge on theology, modern philosophers and political theorists tend to shrink from them. But our new powers of biotechnology make these questions unavoidable. Addressing them is the task of this book, by one of America's preeminent moral and political thinkers.
