The Encyclopædia Britannica Princeton Architectural Press

The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying

dynamic processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

New Insights in the History of Interpreting Springer

This volume represents a collection of contributions presented during the Third Annual University of Chicago Oriental Institute Seminar Religion and Power: Divine Kingship in the Ancient World and Beyond, held at the Oriental Institute, February 23-24, 2007. The purpose of this conference was to examine more closely concepts of kingship in various regions of the world and in different time periods. The study of kingship goes back to the roots of fields such as anthropology and religious studies, as well as Assyriology and Near Eastern archaeology. More recently, several conferences have been held on kingship, drawing on cross-cultural comparisons. Yet the question of the divinity of the king as god has never before been examined within the framework of a cross-cultural and multi-disciplinary conference. Some of the recent anthropological literature on kingship relegates this question of kings who deified themselves to the background or voices serious misgivings about the usefulness of the distinction between divine and sacred kings. Several contributors to this volume have pointed out the Western, Judeo-Christian background of our categories of the human and the divine. However, rather than abandoning the term divine kingship because of its loaded history it is more productive to examine the concept of divine kingship more closely from a new perspective in order to modify our understanding of this term and the phenomena associated with it.

The Dada Painters and Poets Legare Street Press

The Alor-Pantar family constitutes the westernmost outlier group of Pa\puan (Non-Austronesian) languages. Its twenty or so languages are spoken on the islands of Alor and Pantar, located

just north of Timor, in eastern Indonesia. Together with the Papuan languages of Timor, they make up the Timor-Alor-Pantar family. The languages average 5,000 speakers and are under pressure from the local Malay variety as well as the national language, Indonesian. This volume studies the internal and external linguistic history of this interesting group, and showcases some of its unique typological features, such as the preference to index the transitive patient-like argument on the verb but not the agent-like one; the extreme variety in morphological alignment patterns; the use of plural number words; the existence of quinary numeral systems; the elaborate spatial deictic systems involving an elevation component; and the great variation exhibited in their kinship systems. Unlike many other Papuan languages, Alor-Pantar languages do not exhibit clause-chaining, do not have switch reference systems, never suffix subject indexes to verbs, do not mark gender, but do encode clusivity in their pronominal systems. Indeed, apart from a broadly similar head-final syntactic profile, there is little else that the Alor-Pantar languages share with Papuan languages spoken in other regions. While all of them show some traces of contact with Austronesian languages, in general, borrowing from Austronesian has not been intense, and contact with Malay and Indonesian is a relatively recent phenomenon in most of the Alor-Pantar region. This is the second edition of the volume that was originally published in 2014. In this edition, typographical errors have been corrected, small textual improvements have been implemented, broken URL links repaired or removed, and references updated. The overall content of the chapters has not been changed.

The World Bank's Experience with Post-conflict Reconstruction

Palgrave Macmillan

This book explores the problematic relationship between education, social justice and the State, against the background of comparative education research. The book critiques the status quo of stratified school systems, and the unequal distribution of cultural capital and value added schooling. The authors address one of today's most pressing questions: Are social, economic and cultural divisions between the nations, between school sectors, between schools and between students growing or declining?

Religion and Power Language Science Press

"Both timely and well worth the time."-Thomas Keenan, Newsline. aia Award Winner & Oculus Bestseller.

It Could Lead to Dancing United Nations Publications

Presents a collection of essays, manifestos, and illustrations that provide an overview of the Dada movement in art, describing its convictions, antics, and spirit, through the words and art of its principal practitioners.

The Encyclopaedia Britannica: Index World Bank Publications

This book addresses for the first time four major rock art areas of West Papua: the Berau Gulf, Bitsyari Bay, Triton Bay and the Baliem Valley. Together, they form one of the richest regions of rock art and include many newly discovered sites. These sites, located along the South Coast and in the Baliem Highlands, contain thousands of paintings. This book presents, for the first time, hundreds of original photographs including hand stencils, matutuo, faces, and abstract motifs found in West Papua. It also compiles existing hypotheses on the antiquity and origins of rock art in the region and tries to offer a stimulus for further research

The Encyclopaedia Britannica Walter de Gruyter GmbH & Co KG

This handbook provides a complete and updated view of our current knowledge about Carian, one of the Indo-European languages spoken in ancient Anatolia. The decipherment of the Carian alphabet has only recently made it possible to analyze Carian inscriptions and to classify the Carian language linguistically. The book covers all major topics of research on Carian: the direct and indirect sources with an edition of the Carian inscriptions following a new classification system, the history of the decipherment, the Carian alphabet, and the phonological, morphological, lexical, and syntactic features of the language. It includes an annotated Carian glossary. The volume concludes with a special appendix on Carian coins and legends by Koray Konuk that will be of particular interest to specialists in ancient numismatics.

Admission of Chinese Students to American Colleges

Harvard University Press

Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually

the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve wider potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.

Collection of Essays by Legal Advisers of States, Legal Advisers of International Organizations and Practitioners in the Field of International Law John Benjamins Publishing Company

"The last great work of the age of reason, the final instance when all human knowledge could be presented with a single point of view ... Unabashed optimism, and unabashed racism, pervades many entries in the 11th, and provide its defining characteristics ... Despite its occasional ugliness, the reputation of the 11th persists today because of the staggering depth of knowledge contained with its volumes. It is especially strong in its biographical entries. These delve deeply into the history of men and women prominent in their eras who have since been largely forgotten - except by the historians, scholars"-- The Guardian, <https://www.theguardian.com/books/booksblog/2012/apr/10/encyclopedia-britannica-11th-edition>.

The Encyclopaedia Britannica Springer Science & Business Media
This eleventh edition was developed during the encyclopaedia's

transition from a British to an American publication. Some of its articles were written by the best-known scholars of the time and it is considered to be a landmark encyclopaedia for scholarship and literary style.

Other Renaissances BRILL

Clearing landmines, rehabilitating and integrating of excombatants, rebuilding the infrastructure, coordinating aid sources—these are just some of the issues confronting the Bank in post-conflict reconstruction. The explosion of civil conflicts in the post-Cold War world has tested the World Bank's ability to address unprecedented devastation of human and social capital. This study covers post-conflict reconstruction in nine countries, assessing relevant, recent Bank experience. It also presents case-studies for ongoing and future operations, which analyze: 1. the Bank's main strengths or comparative advantages; 2. its partnership with other donors, international organizations, and NGOs; 3. its role in reconstruction strategy and damage and needs assessment; 4. its role in rebuilding the economy and institutions of governance; 5. its management of resources and processes; 6. implications for monitoring and evaluation.

Grand dictionnaire universel du XIXe siècle Springer Science & Business Media

This open access book presents the first comprehensive overview of general methods in Automated Machine Learning (AutoML), collects descriptions of existing systems based on these methods, and discusses the first series of international challenges of AutoML systems. The recent success of commercial ML applications and the rapid growth of the field has created a high

demand for off-the-shelf ML methods that can be used easily and without expert knowledge. However, many of the recent machine learning successes crucially rely on human experts, who manually select appropriate ML architectures (deep learning architectures or more traditional ML workflows) and their hyperparameters. To overcome this problem, the field of AutoML targets a progressive automation of machine learning, based on principles from optimization and machine learning itself. This book serves as a point of entry into this quickly-developing field for researchers and advanced students alike, as well as providing a reference for practitioners aiming to use AutoML in their work.

The Encyclopædia Britannica Springer Science & Business Media

The Consultative Group on International Agricultural Research (CGIAR) was established in 1971 to support the Rockefeller and Ford Foundations in funding four international agricultural research centres in Colombia, Mexico, Nigeria and the Philippines. As the first global programme to receive grants from the World Bank's net income, the CGIAR now consists of 16 autonomous international centres, with a membership of 62 countries, including 24 developing and transition economies. This report evaluates the work of CGIAR and makes several recommendations to address the future challenges it faces in promoting agricultural research.

A Grammar of the Muna Language Unesco

Other Renaissances is a collection of twelve essays discussing renaissances outside the Italian and Italian prompted European Renaissance of the fifteenth and sixteenth centuries. The collection proposes an approach to reframing the Renaissance in

which the European Renaissance becomes an imaginative idea, rather than a particular moment in time

The Oera Linda Book Institute for the Study of Ancient Cultures

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The Alor-Pantar languages Stanford University Press

Tracing the historical figure of Vaslav Nijinsky in contemporary documents and later reminiscences, *Dancing Genius* opens up questions about authorship in dance, about critical evaluation of performance practice, and the manner in which past events are turned into history.

The American nations; or, Outlines of their general history, ancient and modern World Bank Publications

In this revised and expanded edition, leading forensic scientist John Trestrail offers a pioneering survey of all that is known about the use of poison as a weapon in murder. Topics range from the use of poisons in history and literature to convicting the poisoner in court, and include a review of the different types of poisons, techniques for crime scene investigation, and the critical essentials of the forensic autopsy. The author updates what is

currently known about poisoners in general and their victims. The Appendix has been updated to include the more commonly used poisons, as well as the use of antifreeze as a poison.

Criminal Poisoning Springer

Who mediated intercultural exchanges in 9th-century East Asia or in early voyages to the Americas? Did the Soviets or the Americans invent simultaneous interpreting equipment? How did the US government train its first Chinese interpreters? Why is it that Taiwanese interpreters were executed for Japanese war crimes? Bringing together papers from an international symposium held at Rikkyo University in 2014 along with two select pieces, this volume pursues such questions in an eclectic

exploration of the practice of interpreting, the recruitment of interpreters, and the challenges interpreters have faced in diplomacy, colonization, religion, war, and occupation. It also introduces innovative use of photography, artifacts, personal journals, and fiction as tools for the historical study of interpreters and interpreting. Targeted at practitioners, scholars, and students of interpreting, translation, and history, the new insights presented in the ten original articles aim to spark discussion and research on the vital roles interpreters have played in intercultural communication through history. Now Open Access as part of the Knowledge Unlatched 2017 Backlist Collection.
