At last, the first full account of the cypherpunks who aim to free the world's institutional secrets, by Forbes journalist Andy Greenberg who has

traced their shadowy history from the cryptography revolution of the 1970s to Wikileaks founding hacker Julian Assange, Anonymous, and beyond. WikiLeaks brought to light a new form of whistleblowing, using powerful cryptographic code to hide leakers' identities while they spill the private data of government agencies and corporations. But that technology has been evolving for decades in the hands of hackers and radical activists, from the libertarian enclaves of Northern California to Berlin to the Balkans. And the secret-killing machine continues to evolve beyond WikiLeaks, as a movement of hacktivists aims to obliterate the world's

institutional secrecy. This is the story of the code and the characters—idealists, anarchists, extremists—who are transforming the next generation’s notion of what activism can be. With unrivaled access to such major players as Julian Assange, Daniel Domscheit-Berg, and WikiLeaks’ shadowy engineer known as the Architect, never before interviewed, reporter Andy Greenberg unveils the world of politically-motivated hackers—who they are and how they operate. *Prune Nolo* Discover the secret to being productive and successful no matter where you are with this essential guide to remote work. In this white-knuckled true story that is “as exciting as any action novel” (The New York Times Book Review), an astronomer-turned-cyber-detective begins a personal quest to

expose a hidden network of spies that threatens national security and leads all the way to the KGB. When Cliff Stoll followed the trail of a 75-cent accounting error at his workplace, the Lawrence Berkeley National Laboratory, it led him to the presence of an unauthorized user on the system. Suddenly, Stoll found himself crossing paths with a hacker named “Hunter” who had managed to break into sensitive United States networks and steal vital information. Stoll made the dangerous decision to begin a one-man hunt of his own: spying on the spy. It was a high-stakes game of deception, broken codes, satellites, and missile bases, one that

eventually gained the attention of the CIA. What started as simply observing soon became a game of cat and mouse that ultimately reached all the way to the KGB. How You Can Profit from Credit Cards

Penguin
All credit cards are

created equal, right? Wrong! That's like saying a dented, 1970s van is the same as a fully loaded, luxury 2020 SUV. Consumer credit cards can vary dramatically in terms and conditions that either cost or save you money. Because financial institutions are extremely competitive in marketing credit cards, you'll find different terms and conditions among the suppliers. If you're a smart shopper, you'll pay attention to the fine print. Naturally you want the most credit for the least long-term cost. Look for a credit card with a low APR. That's the Annual Percentage Rate or the actual cost for credit. It's basically the price of renting the credit card company's money

for a period of time. Time is of the essence here. Make the minimum monthly payment on time, every time and you'll keep the stated APR. If your payment is late (or missing), some cards bump up your APR by several percentage points. A late payment could boost your APR into the 18-22% range and it stays there - there's no reduction for making the next payment, because your late payment threw you into the high APR penalty box with no escape clause. Let's assume that you're a good credit risk and you'll make the monthly payments on time. Look for a card that gives a little something extra, like bonus points that can be traded for gifts,

restaurant meals, movie tickets, music downloads or travel and hotel stays. As you spend on your credit card, you actually earn something else that you want. That's making a good deal even better. There are some people who charge everything and pay in full each month, and are easily able to afford roundtrip first-class tickets anywhere in the world each year! The fastest way to get a credit card and start shopping is to apply for the card online. In mere minutes, you can complete the credit card application and get approval almost immediately if your credit checks out. With instant credit, some companies give you a small opening limit so you can shop online

right away. You have to wait a few days (usually 7-10 business days) for the actual card to arrive by snail mail. If you currently have a high interest credit card, you may be able to find a better deal online where you can transfer the balance and pay 0% interest for 6 months, or some comparable transfer incentive that makes it worth your while to make the switch.
