Systems Analysis and Design: An Object-Oriented Approach with UML, 5th Edition by Dennis, Wixom, and Tegarden captures the dynamic aspects of the field by keeping students focused on doing SAD while presenting the core set of skills that every systems analyst needs to know today and in the future. The text enables students to do SAD—not just read about it, but understand the issues so they can actually analyze and design systems. The text introduces each major technique, explains what it is, explains how to do it, presents an example, and provides opportunities for students to practice before they do it for real in a project. After reading each chapter, the student will be able to perform that step in the system development process.

Despite technological advances, many basic library activities still lend themselves to analysis and improvement. Richard M. Dougherty provides numerous examples and easy-to-apply tools and techniques to assess what libraries are doing, how they are doing it, and how much time is required to do it. These tools include block diagrams, check sheets, flow process charts, work-flow diagrams, flow charts, through-put analysis, self-administered diary studies, and work sampling. Specific examples from all areas of library operations are presented. Streamlining Library Services provides detailed information on how to diagnose problem areas with such tools as Pareto and fishbone charts; use brainstorming; organize a work-flow study; and build and present cost studies. Special emphasis is placed on activities that should occur after the analysis is concluded, including

data analysis, reporting study results, and making recommendations to management. Guidelines are provided for managers and staff as they strive to streamline activities. Topics include implementation issues and strategies that must be addressed as new workflows and services are introduced and organizational change issues and strategies for building staff support toward change. Component-based software development (CBD) is an emerging discipline that promises to take software engineering into a new era. Building on the achievements of object-oriented software construction, CBD aims to deliver software engineering from a cottage industry into an industrial age for Information Technology, wherein software can be assembled from components, in the manner that hardware systems are currently constructed from kits of parts. This volume provides a survey of the current state of CBD, as reflected by activities that have been taking place recently under the banner of CBD, with a view to giving pointers to future trends. The contributions report case studies — self-contained, fixed-term investigations with a finite set of clearly defined objectives and measurable outcomes — on a sample of the myriad aspects of CBD. The book includes chapters dealing with COTS (commercial off-the-shelf) components; methodologies for CBD; compositionality, i.e. how to calculate or predict properties of a composite from those of its constituents; component software testing; and grid computing.

Management Basics for Information Professionals, Third Edition Facet Publishing

This book adheres to the B.Tech. and MCA syllabus of JNT University, Hyderabad and many other Indian universities. The first two chapters represent the fundamentals of object technology, OOP and OOAD and how people are inclined towards object-oriented analysis and design starting from traditional approach and the different approaches suggested by the three pioneers-Booch, Rum Baugh and Jacobson. Chapters 3 to 18 represent the UML language, the building blocks of UML i.e., things, relationships and diagrams and the use of each diagram with an example. Chapters 19 and 20 discuss a case study "Library Management System". In this study one can get a very clear idea what object oriented analysis and design is and how UML is to be used for that purpose. Appendix-A discusses the different syntactic notations of UML and Appendix-B discusses how the three approaches of Booch, Rum Baugh and Jacobson are unified and the Unified Process. --
