Home to an estimated 15.9% of the world's proven oil reserves, Saudi Arabia is the single largest economy in the Middle East and North Africa. According to the Ministry of Finance, real GDP grew by 3.8% to \$746bn in 2013. While oil income is expected to continue to account for the majority of government revenues for the foreseeable future, the non-oil sector has expanded significantly in recent decades growing 9.3% in 2013. Indeed, while some Western countries may be seeing a return to cautious optimism and leading emerging economies are weighing the potential impact on capital flows of tapering in the US Federal Reserve's quantitative easing programme, Saudi Arabia is seeing sustained growth buoyed by high global oil prices and internal investment in its own infrastructure. Some 15 years after Saudi Arabia attended the inaugural meeting of G20 countries, its key economic indicators make it the envy of many other member states. Given the size of Saudi economy within the regional and indeed global market, OBG looks in depth at bilateral trade between ASEAN nations and the GCC.

Mobilizing Human Resources in the Arab World (RLE Economy of Middle East) Xlibris Corporation

R. Paul Shaw has travelled widely in the Arab world, obtaining data and gathering impressions first-hand from national and local planners. In this book, he identifies population and manpower problems that are likely to become more serious and more difficult to solve if they are neglected at this early stage of Arab development. He focuses on five broad areas which are directly or indirectly related to mobilizing human resources, and his book will be of special interest to all those who are concerned with such issues as population, migration, employment, inequality, the emancipation of women, construction and agriculture. Dr Shaw proposes policy directives which are sensitive to the problems as they are seen by the Arab governments themselves, and sets out practical guidelines which can be used by Arab planners and policy-makers. An important feature of the book with respect to current literature on Arab development is that it moves away from a preoccupation with growth-related investments to a concentration on development-related population, manpower and employment issues. By bringing together such comprehensive empirical and

bibliographic information, it will also be invaluable as a reference source for some twenty Arab countries. First published in 1983.

Saudi Arabia has begun a fundamental policy shift to respond to low oil prices. The government has introduced a series of reforms over the past year and has recently set out plans for a bold and ambitious transformation of the Saudi Arabian economy in Vision 2030 and the National Transformation Program. Diversifying the economy, creating jobs for nationals in the private sector, and implementing a gradual, but sizable and sustained fiscal consolidation are key policy priorities.

This extremely timely and helpful ready reference will familiarize all students and readers with the Gulf region and Saudi Arabia, Bahrain, Dubai, the UAE, Kuwait, Oman, Yemen, and Qatar. These states are bound by the desert culture, the Gulf, new oil economy, and Islam, to name some commonalities. Most Americans know something about the region, such as oases, dates, camels, oil, Bedouin tribes, and the legends of Lawrence of Arabia to Osama bin Laden. Islamic concepts and practices are still unfamiliar. On one extreme, Saudi Arabia, the cradle of Islam, has been largely closed off to Western tourists. On the other extreme, Dubai courts tourist dollars as it constructs modern architectural showcases. This is the first A-Z encyclopedia to focus on the Gulf, illuminating the land, people, religion, culture and traditions, institutions, economy, and much more for general readers. The more than 200 essay entries have a current focus with historical context as necessary. The breadth of coverage means that this

resource will be of use for a wide range of researchers and browsers. Besides individual entries on each state, major cities and regions are also profiled. The natural environment and human adaptation to it receives significant space. Islamic customs and rules and various interpretations are clearly explained. Essays on topics such as key public figures, institutions, major events, politics, and state structures—some based on sources often not available in English—make this two-volume set the first-choice resource for accurate information. Suggestions for further reading accompany most entries; a chronology, selected bibliography, and photos also complement the text.
