Sentinels & Saviors of the Sea - A Collection of United States Coast Guard History - Volume 4 is a collection of thirty short histories of the United States Coast Guard and its predecessor agencies.

Lighthouse Bethany House

Lighthouses have always unsettled and attracted in equal measure, highlighting the triumphs and failures in humanity's battle with the forces of nature. Taking as its heroes the lighthouses themselves, Sentinels of the Sea describes the engineering genius that allowed their construction on even the smallest of rock outcrops and the innovations that made the lights so powerful and reliable. Intricate, elegant architectural plans and elevations, and evocative period drawings and photographs showcase the innovative designs and technologies behind fifty historic lighthouses built around the world from the

17th to the 20th century. R.G. Grant's engaging and authoritative text chronicles the incredible feats of engineering and endurance that brought these iconic, isolated towers into being, the advances in lens technology that made the lights so effective, and the everyday routines of the lighthouse keepers and the heroic rescues that some performed. Packed with extraordinary stories of human endeavour, desperate shipwrecks, builders defying the elements and heroic sea rescues, the book also reveals the isolation and vulnerability of the dedicated lighthouse keepers.

Studying animals in the environment may be a realistic and highly beneficial approach to identifying unknown chemical contaminants before they cause human harm. Animals as Sentinels of Environmental Health Hazards presents an overview of animal-monitoring programs, including detailed case studies of how animal health problems—such as the effects of DDT on wild bird populations—have led researchers to the sources of human health hazards. The authors examine the components and characteristics required for an effective animal-monitoring program, and they evaluate numerous existing programs, including in situ research, where an animal is placed in a natural setting for monitoring purposes.

Lighthouses are striking totems of our relationship to the sea. For many, they encapsulate a romantic vision of solitary homes amongst the waves, but their original purpose was much more utilitarian than that. Today we still depend upon their guiding lights for the safe passage of ships. Nowhere is this truer than in

the rock lighthouses of Great Britain and Ireland which form a ring of twenty towers built between 1811 and 1904, so-called because they were constructed on desolate rock formations in the middle of the sea, and made of granite to withstand the power of its waves. *Seashaken Houses* is a lyrical exploration of these singular towers, the people who risked their lives building and rebuilding them, those that inhabited their circular rooms, and the ways in which we value emblems of our history in a changing world.

Octopus loves living on the busy reef under the sea. From her cozy cave, she can see clown fish, and sea turtles, and little butterflies swimming by. She especially loves watching the seahorses having fun, wiggling and twirling. Sometimes she will play with them, but occasionally Octopus just wants to be alone, somewhere quiet, and not so busy. So one day, she swims far, far beyond the reef and finds another cozy cave, only here she is perfectly, wonderfully alone. It is exactly what she wanted . . .

until she's ready to go back home to be with her friends. As she did in *Little Owl's Night*, Divya Srinivasan shows children a wonderful part of the natural world in a very warm-hearted way.

"John James Audubon's paintings of birds are as familiar as they are beautiful. But even among his admirers, many may be

surprised to learn that Audubon was a gifted writer. In this one-of-a-kind anthology, Christoph Irmscher and Richard J. King have curated a collection of Audubon's coastal and sea writing, which represent Audubon's most compelling and evocative depictions of the natural world and early nineteenth-century American life. The collection is geographically diverse, bringing to light the variety of people and wildlife Audubon met or observed, pulling from the massive *Ornithological Biography* (1831-1839) as well as the "Autobiography" and journals. The editors supplement the selections with an instructive introduction and powerful coda, section headnotes, explanatory notes, and an appendix linking Audubon's species to current taxonomy and geographic ranges. The book is lavishly illustrated as well. There is much more in *Audubon at Sea* than descriptions of birds: we have stories of life aboard ship, of travel in early America and Audubon's work habits, the origins of iconic paintings, and, in the end, the carefully drawn commentary on a flawed and, at best, ambiguous hero"--

The Stowaway Castellnou

Moby Dick és la novel·la més important de Melville. Explica l'obsessió d'un home, el capità Ahab, per matar Moby Dick, una balena en la qual veu l'encarnació del Mal. Ahab actua mogut per

l'odi a l'animal que, una vegada, li va arrencar una cama. Però, per sobre del ressentiment, predomina la seva convicció que Moby Dick és un ésser malèfic que el destí ha decidit posar davant d'ell perquè el mati o perquè mori en l'intent.

Timeless, beautiful, and haunting, spirals connect the four

episodes of *The Ghosts of Heaven*, the mesmerizing new novel from Printz Award winner Marcus Sedgwick. They are there in prehistory, when a girl picks up a charred stick and makes the first written signs; there tens of centuries later, hiding in the treacherous waters of Golden Beck that take Anna, who people call a witch; there in the halls of a Long Island hospital at the beginning of the 20th century, where a mad poet watches the oceans and knows the horrors it hides; and there in the far future, as an astronaut faces his destiny on the first spaceship sent from earth to colonize another world. Each of the characters in these mysterious linked stories embarks on a journey of discovery and survival; carried forward through the spiral of time, none will return to the same place. This title has Common Core connections.

One of the most rugged expanses in the continental U.S., the coast of northern California and Oregon saw frequent shipping disasters in the 19th century, before Congress ordered the construction of lighthouses on such dangerous promontories as Heceta Head, Cape Mendocino and a seaward-trending pile of rocks called St. George Reef. The brave, resourceful engineer who directed the Tillamook Rock lighthouse construction, Alexander Ballantyne, was later engaged for the St. George job, and it's this story that author Powers (*Treasure Ship*) chronicles here. Without any maps to illustrate it, however, readers will need an atlas to follow the movement of men and ships up and down the coast. Later chapters describing lighthouse life prove less problematic; lighthouse keepers were fascinating, courageous characters (and included a good number of women) who not only kept lights burning and fog horns sounding, but also risked life and limb to rescue people stranded in torrential weather.
