Identity in Crossroad Civilisations Springer
Nature

An easy-to-read and comprehensive description of the world of economics. Includes simple graphics, comprehensive examples, numerous anecdotes and historical illustrations. Instructive and entertaining at the same time.

Organization Development and Change

Taylor & Francis

Blends theory, concepts and applications in organization development. This book applies behavioral science knowledge to the development of organizational structures, strategies, and processes.

The Invisible Hand University of New Mexico Press

This book sheds light on all aspects of earnings claims, including defining what an earnings claim really is, the origins of its regulation under the franchise disclosure laws, how a franchisor should prepare an earnings claim, how a

franchisee should use an earnings claim, how a franchisee may attack lawful and unlawful earnings claims, how a franchisor may defend against such attacks, and how the government franchise enforcement authorities, investigate unlawful earnings claim activity.

Since the doi moi reforms in 1986, Vietnam has experienced a dramatic socioeconomic transformation. Lim examines the role of the state and its interaction with market forces in bringing this change about. Taking the motorcycle and banking industries as case studies, this book explores the dynamics between the state and transnational corporations in shaping the manufacturing and service sectors, respectively. Vietnam, as one of Southeast Asia's quintessential latecomer economies with little prior experience of dealing with transnational corporations, has nevertheless been quite successful in maintaining some control over the impact of foreign direct investment. Yet, the learning outcomes remain highly uneven. In addition, Lim argues that Vietnamese advancement in both industries mirrors only partially the more generalized patterns of state-led development in East Asia's earlier batch of latecomer

economies. Vietnam's case thus presents practical lessons on how to succeed in crafting and utilizing policy instruments to achieve domestic economic and technological upgrading. This book will be of great interest to scholars of political economy and industrial policy in East Asia, as well as to scholars and policy professionals analyzing approaches to development strategy more broadly. *Autonomous Vehicles in Support of Naval Operations* Springer Science & Business Media

If you ever needed proof that a magazine can have a love affair with a musician, you're holding it in your hands. For *DownBeat*, the preeminent publication of the jazz world, Miles Dewey Davis was one of its most cherished subjects. Since it began covering the jazz scene in 1939, no other artist has been more diligently chronicled in its pages than Davis. The beauty of this collection is seeing the development of an artist over time. The reviews of his music go from quietly introducing a new talent to revering, perhaps, the greatest jazz artist of his generation. The feature articles begin with a very young, very polite Davis lamenting,

"I've worked so little. I could probably tell you where I was playing any night in the last three years." As he develops, the interviews show Davis gaining confidence and stature, showing swagger and becoming the over-the-top, say-it-like-it-is showman that made every interview an event. The Miles Davis Reader compiles more than 200 news stories, feature articles, and reviews by some of the greatest writers in jazz into one volume. It delivers a patchwork of his words and music - in the moment, as they happened. With several lengthy features added along with a dozen new photographs, this new edition is a beautiful series of snapshots, a year-by-year ride through the many phases of Davis as an artist and as a man. In the early 1900s the motor-vehicle (car, bus, lorry or motor-cycle) was introduced in sub-Saharan Africa. Initially the plaything and symbol of colonial domination, the motor-vehicle transformed the economic and social life of the continent. Indeed, the motor-vehicle is arguably the single most important factor for change in Africa in the twentieth

century. A factor for change that thus far has been neglected in research and literature. Yet its impact extends across the totality of human existence; from ecological devastation to economic advancement, from cultural transformation to political change, through to a myriad of other themes. This edited volume of eleven contributions by historians, anthropologists and social and political scientists explores aspects of the social history and anthropology of the motor-vehicle in Africa.

Chlorophyll a Fluorescence: A Signature of Photosynthesis highlights chlorophyll (Chl) a fluorescence as a convenient, non-invasive, highly sensitive, rapid and quantitative probe of oxygenic photosynthesis. Thirty-one chapters, authored by 58 international experts, provide a solid foundation of the basic theory, as well as of the application of the rich information contained in the Chl a fluorescence signal as it relates to photosynthesis and plant productivity. Although the primary photochemical reactions of photosynthesis are highly

efficient, a small fraction of absorbed photons escapes as Chl fluorescence, and this fraction varies with metabolic state, providing a basis for monitoring quantitatively various processes of photosynthesis. The book explains the mechanisms with which plants defend themselves against environmental stresses (excessive light, extreme temperatures, drought, hyper-osmolarity, heavy metals and UV). It also includes discussion on fluorescence imaging of leaves and cells and the remote sensing of Chl fluorescence from terrestrial, airborne, and satellite bases. The book is intended for use by graduate students, beginning researchers and advanced undergraduates in the areas of integrative plant biology, cellular and molecular biology, plant biology, biochemistry, biophysics, plant physiology, global ecology and agriculture.

Scale modeling can play an important role in R&D. When engineers receive some ideas in new product development, they can test how the new design looks by buying scale models and they can get an actual feeling with the prototype through

their imagination. Professor Emori often said: "When children play with a toy airplane, their mind is wondering about the prototype airplane which they haven't ridden. " Children can use the scale model airplane as a means to enter into an imaginative world of wonder by testing in their own way how the actual airplane might function, how the actual airplane can maneuver aerodynamically, what might be the actual sound of a jet engine, how to safely land the actual airplane, and so on. This imagination that scale models can provide for children will help them later develop professional intuition. Physical scale models can never be entirely successfully replaced by computer screens where virtual models are displayed and fancy functions are demonstrated. Not only children but also adults can learn things by actually touching things only offered by physical models, helping all of us develop imagination and feeling eventually leading toward Kufu. Einstein's famous "thought experiments [11]," which helped him to restructure modern physics may possibly and effectively be taught by letting researchers play with scale models!?

An introduction to the engineering principles of embedded systems, with a focus on modeling, design, and analysis of cyber-physical systems. The most visible use of computers and software is processing information for human consumption. The vast majority of computers in use, however, are much less visible. They run the engine, brakes, seatbelts, airbag, and audio system in your car. They digitally encode your voice and construct a radio signal to send it from your cell phone to a base station. They command robots on a factory floor, power generation in a power plant, processes in a chemical plant, and traffic lights in a city. These less visible computers are called embedded systems, and the software they run is called embedded software. The principal challenges in designing and analyzing embedded

systems stem from their interaction with physical processes. This book takes a cyber-physical approach to embedded systems, introducing the engineering concepts underlying embedded systems as a technology and as a subject of study. The focus is on modeling, design, and analysis of cyber-physical systems, which integrate computation, networking, and physical processes. The second edition offers two new chapters, several new exercises, and other improvements. The book can be used as a textbook at the advanced undergraduate or introductory graduate level and as a professional reference for practicing engineers and computer scientists. Readers should have some familiarity with machine structures, computer programming, basic discrete mathematics and algorithms, and signals and systems.

Advances in Unmanned Aerial Vehicles Springer Science & Business Media
Autonomous vehicles (AVs) have been used in military operations for more than 60 years, with torpedoes, cruise missiles, satellites, and target drones being early examples.¹ They have also been widely used in the civilian sector—for example, in

the disposal of explosives, for work and measurement in radioactive environments, by various offshore industries for both creating and maintaining undersea facilities, for atmospheric and undersea research, and by industry in automated and robotic manufacturing. Recent military experiences with AVs have consistently demonstrated their value in a wide range of missions, and anticipated developments of AVs hold promise for increasingly significant roles in future naval operations. Advances in AV capabilities are enabled (and limited) by progress in the technologies of computing and robotics, navigation, communications and networking, power sources and propulsion, and materials. *Autonomous Vehicles in Support of Naval Operations* is a forward-looking discussion of the naval operational environment and vision for the Navy and Marine Corps and of naval mission needs and potential applications and limitations of AVs. This report considers the potential of AVs for naval operations, operational needs and technology issues, and opportunities for improved operations.

Orchestrating Public Opinion for the first time examines in detail music's persuasive role in political ads for US presidential campaigns. Studies on political ads tend to consider music something of an afterthought, innocuous accompaniment for a narrator. In this book Christiansen takes an opposing view, arguing that music is crucial to an ad's construction. In some cases, it is even determinative: that is, all other elements-images, voiceover, sound effects, written text, and so on-can be circumscribed by and interpreted in relation to music. This book presents for the first time correspondence between campaign officials and ad agencies, storyboards, and music scores related to ads such as Eisenhower's "I Like Ike" or Reagan's "Morning in America." Engaging music seriously through detailed musical analysis as well as exploring music's relation to visual and textual elements in ads, *Orchestrating* brings together disparate approaches toward understanding the surreptitious rhetoric of music.

This volume considers audiovisual material as a primary source for historiography. By analyzing how the same sounds are used in different media contexts at different times, the contributors challenge the linear perspective of music history based on canonical authority.

The past decade has seen tremendous interest in the production and refinement of unmanned aerial vehicles, both fixed-wing, such as airplanes and rotary-wing, such as helicopters and vertical takeoff and landing vehicles. This book provides a diversified survey of research and development on small and miniature unmanned aerial vehicles of both fixed and rotary wing designs. From historical background to proposed new applications, this is the most comprehensive reference yet.

The International Business Environment is written for undergraduate and masters--level students taking an introductory module on the international context and

environment of business as part of an International Business, Business Studies or Management degree. The book provides broad and discursive coverage of the external environment confronted by both large and small organisations. It examines the key issues and institutions within economic, political and legal frameworks, as well as the impacts of social and cultural, technological and ecological developments. A well-structured chapter framework features mini-cases, summaries, references and further reading. A selection of long cases provides further substantial illustration of concepts in practice. A website for the tutor contains teaching and case notes, as well as presentation slides. It can be found at www.booksites.net/brooks Key Features Applied business focus covers all aspects of the international business environment Longer cases feature a range of industries in public and private sectors Mini-cases and discussion questions provide regular opportunity for critical reflection Recent data and examples bring immediate relevance to the subject References to relevant websites at the end of each chapter Dr Ian Brooks is Dean of

Northampton Business School at University College Northampton and researches organisational change. Jamie Weatherston is Senior Lecturer in Strategic Management at Newcastle Business School, Northumbria University Graham Wilkinson is Senior Lecturer in Business and Economics at Northampton Business School, University College Northampton.

This is the definitive reference for microphones and loudspeakers, your one-stop reference covering in great detail all you could want and need to know about electroacoustics devices (microphones and loudspeakers). Covering both the technology and the practical set up and placement this guide explores and bridges the link between experience and the technology, giving you a better understanding of the tools to use and why, leading to greatly improved results.

This second edition emphasizes the environmental impact on reproduction, with updated chapters throughout as well as complete new chapters on species such

as sharks and rays. This is a wide-ranging book that will be of relevance to anyone involved in species conservation, and provides critical perspectives on the real utility of current and emerging reproductive sciences. Understanding reproductive biology is centrally important to the way many of the world's conservation problems should be tackled. Currently the extinction problem is huge, with up to 30% of the world's fauna being expected to disappear in the next 50 years. Nevertheless, it has been estimated that the global population of animals in zoos encompasses 12,000 - 15,000 species, and we anticipate that every effort will be made to preserve these species for as long as possible, minimizing inbreeding effects and providing the best welfare standards available. Even if the reproductive biology community cannot solve the global biodiversity crisis for all wild species, we should do our best to maintain important captive populations. Reproductive biology in this context is much more than the development of techniques for helping with too little or too much breeding. While some of the relevant techniques are useful for

individual species that society might target for a variety of reasons, whether nationalistic, cultural or practical, technical developments have to be backed up by thorough biological understanding of the background behind the problems.

The Indian economy is one of the fastest growing economies in the world. At the same time it is beset with a host of socio-economic problems. This report, by leading experts, provides a comprehensive review of the current state of the Indian economy. In the context of two decades of structural reforms, it analyses the problems and policy issues affecting India's growth and development. Sixth in the IDR series, this report examines diverse topics of contemporary relevance: Food security and agrarian crises; Poverty and inequality; Energy insecurity; Disasters and environmental challenges; Industrial performance and regional disparities in manufacturing growth; Role of auditors in governance; Performance of the telecommunications industry; Trade liberalization and India's export sophistication; Capital inflows and policy

choices; Outreach of banking services; Employment and industrial relations. It includes a statistical appendix which is a valuable source of information on the macroeconomic trends.

"Part review, part testament to extraordinary dedication, and part call to get involved, *Cetacean Societies* highlights the achievements of behavioral ecologists inspired by the challenges of cetaceans and committed to the exploration of a new world."—from the preface by Richard Wrangham Long-lived, slow to reproduce, and often hidden beneath the water's surface, whales and dolphins (cetaceans) have remained elusive subjects for

scientific study even though they have fascinated humans for centuries. Until recently, much of what we knew about cetaceans came from commercial sources such as whalers and trainers for dolphin acts. Innovative research methods and persistent efforts, however, have begun to penetrate the depths to reveal tantalizing glimpses of the lives of these mammals in their natural habitats. *Cetacean Societies* presents the first comprehensive synthesis and review of these new studies. Groups of chapters focus on the history of cetacean behavioral research and methodology; state-of-the-art reviews of information on four of the most-studied species: bottlenose dolphins, killer whales, sperm whales, and humpback whales; and

summaries of major topics, including group living, male and female reproductive strategies, communication, and conservation drawn from comparative research on a wide range of species. Written by some of the world's leading cetacean scientists, this landmark volume will benefit not just students of cetology but also researchers in other areas of behavioral and conservation ecology as well as anyone with a serious interest in the world of whales and dolphins. Contributors are Robin Baird, Phillip Clapham, Jenny Christal, Richard Connor, Janet Mann, Andrew Read, Randall Reeves, Amy Samuels, Peter Tyack, Linda Weilgart, Hal Whitehead, Randall S. Wells, and Richard Wrangham.
